GREAT TRANSFORMERS COMPETITION

Hasbro Dinobots to be won in this great £1000 competition. Plus stacks of Ocean games.

A Ferguson that gives you double vision.

Hang on, are you seeing things?

In the top picture it looks like a portable TV. In the bottom picture it looks like a computer monitor.

The truth is that the Ferguson MC05 is designed to be the best of both.

It has RGB and Composite Video sockets, providing the shortest possible route for the signal to the screen, by-passing the circuits of a conventional television.

Whichever way you look at it, the picture quality is outstanding. And you can switch automatically between computer screen and normal TV screen, without having to change connections.

So why buy two sets, when you can get one that doubles up?

FERGUSON

No-one is more switched on.

Amstrad owners start out happy, and get even happier as time goes on.

The first delightful discovery is that both the CPC 6128 and the CPC 464 are complete and ready to use as soon as you get them home.

The CPC 464 comes with built-in datacoder, and the CPC 6128 with built-in disc drive. And both have either a full colour monitor or a green screen.

But Amstrad owners can become even more attached to their computers with the simple addition of the peripherals featured here.

They'll make your Amstrad faster, harder working and more entertaining.

And they're very easy to attach. Simply plug in, and away you go, there's no need for extra interfaces.

You may of course wish to get into some even more serious computing, for which you will need the Amstrad RS 232C specialist interface. This opens the door to modems, networks, and serial printing.

But whichever additions to your Amstrad you care to make you'll find their low prices an additional pleasure.

YC/P/3
Tell me more about the Amstrad range of peripherals.

Name _____

Amstrad peripherals

Amstrad, P.O. Box 462, Brentwood, Essex CM14 4EF

Most home computers.

As you can see, the Amstrad CPC 464 is no ordinary home computer.

For a start, it comes complete with an integral cassette datacorder.

And in addition, you get the choice of either a superb quality green screen or a full colour monitor.

With £100 of free software to get you going all you have to do is plug in and start computing.

The 64k of RAM means you'll have plenty of memory to play with. And there are over 200 Amsoft games, that you

can play, many exclusive to Amstrad.

But games are only half the fun on the Amstrad CPC 464. In fact using it can also be quite an education.

The kids can learn spelling and arithmetic with software like Wordhang and Happy Numbers.

Whilst adults will love the way it helps around the house with budgeting and accounts.

Put the 464 to work and it will take care of a number of business-like functions, such as wordprocessing and spreadsheet.

The complete home computer.

To help you get the most from your CPC 464, there's the Amstrad User Club as well as a number of books and user magazines devoted to this most versatile home computer.

And your 464 will be made even more complete with the simple connection of joysticks, printers, disc drives, speech synthesisers and light pens.

But perhaps the most extraordinary thing about the Amstrad CPC 464 is the price.

Just £199 with green screen, or £299 with full colour monitor.

For more information about the complete home computer, all you have to do is complete the coupon.

POWER

Two powerful packages of personal computing programming techniques made instantly usable by Dorling Kindersley's unique 'Screen Shot' presentation.

What you see in the pages of the books is what you get on the screen when you follow the step-by-step programming guidance in the text. The crystal-clear illustration is easy-to-follow and guaranteed free from typographic errors.

STARTER PACKS

The Starter Packs for the Commodore 64, ZX Spectrum+ and BBC Micro get you going quickly with BASIC programming.

The accompanying software offers carefully graded exercises leading to rapid keyboard familiarity.

Available from larger branches of Boots, Menzies, W H Smith and leading bookshops and computer stores. In case of difficulty, write to Dorling Kindersley Publishers Ltd, 1-2 Henrietta Street, Covent Garden, London WC2E 8PS.

ZX SPECTRUM

Tasword Two THE WORD PROCESSOR

TASWORD TWO for the ZX 48K Spectrum
cassette **£13.90** microdrive cartridge **£15.40**

"Without doubt the best utility I have reviewed for the Spectrum"

HOME COMPUTING WEEKLY APRIL 1984

"If you have been looking for a word processor, then look no further"

CRASH JUNE 1984

With 64 characters per line on the screen and a host of useful features TASWORD TWO is the ideal word processing package for the Spectrum owner.

Tasprint THE STYLE WRITER

TASPRINT for the ZX 48K Spectrum
cassette **£9.90** microdrive cartridge **£11.40**

A must for dot matrix printer owners! Print your program output and listings in a choice of five impressive print styles. TASPRINT utilises the graphics capabilities of dot matrix printers to form, with a double pass of the printhead, output in a range of five fonts varying from the futuristic Data-Run to the hand writing simulation of Palace Script. A TASPRINT gives your output originality and style! The TASPRINT fonts are shown below together with a list of compatible printers.

Tasman Printer INTERFACE

TASPRINT PRINTER INTERFACE for the
ZX Spectrum **£39.90**
RS232 Cable for ZX Interface 1 **£14.50**

Plug into your Spectrum and drive any printer fitted with the Centronics standard parallel interface. Supplied complete with ribbon cable and driving software. The user changeable interface software makes it easy to send control codes to your printer using the method so successfully pioneered with TASWORD TWO. The cassette contains fast machine code high resolution full width SCREEN COPY SOFTWARE for Epson, Mannesmann Tally, Shinwa, Star, Tandy Colour Graphic (in colour!) printers. TASCOPY shaded screen copy software for this interface (value £9.90) is INCLUDED in this package.

The TASCOPES and TASPINTS drive all Epson compatible eight pin dot-matrix printers e.g.

AMSTRAD DMP 2000	NEC PC-8023B-N	BROTHER M1009
EPSON FX-80	MANNESSMANN TALLY MT-80	BROTHER HR5
EPSON RX-80	STAR DMP 501/515/5610	SHINWA CP-80
EPSON MX-80 TYPE III	COSMOS-80	DATA PANTHER
		DATA PANTHER II

COMPACTA - bold and heavy, good for emphasis
DATA-RUN - a futuristic script
LECTURA LIGHT - clean and pleasing to read
MEDIAN - a serious business-like script
PALACE SCRIPT - a distinctive flowing font

TASPRINT output shown at less than half size

Tasmerge THE MAIL MERGER

TASMERGE for the
ZX 48K Spectrum
cassette **£10.90**

Transfer data from MASTERFILE to TASWORD TWO! Letters and forms typed on TASWORD TWO can be printed with addresses and data taken from MASTERFILE. The mail merge facility allows, for example, multiple copies of a letter to be printed, each containing a different name and address taken from your MASTERFILE data. To use TASMERGE you must have one or more microdrives as well as TASWORD TWO and MASTERFILE by Campbell Systems (version 9 or later).

Taswide THE SCREEN STRETCHER

TASWIDE for the ZX 48K Spectrum
cassette **£5.50**

With this machine code utility you can write your own Basic programs that will, with normal PRINT statements, print onto the screen in the compact lettering used by TASWORD TWO. With TASWIDE you can double the information shown on the screen!

Amstrad CPC 464 - 664 - 6128

With the exception of TASWORD 6128 all the programs described below run on all of the 464, the 664, and the 6128.

Tasword 464 THE WORD PROCESSOR

TASWORD 464 for the Amstrad CPC 464, 664, and 6128 cassette **£19.95**

"There is no better justification for buying a 464 than this program"

POPULAR COMPUTING WEEKLY
NOVEMBER 1984.

ZX SPECTRUM MSX·EINSTEIN

Tascopy THE SCREEN COPIER

TASCOPY for the ZX Spectrum with Interface 1
cassette **£9.90** microdrive cartridge **£11.40**

The Spectrum TASCOPY is for use with the RS232 output on ZX Interface 1. It produces both monochrome (in a choice of two sizes) and large copies in which the different screen colours are printed as different shades. With TASCOPY you can keep a permanent and impressive record of your screen pictures and diagrams. A list of printers supported by TASCOPY is given to the left.

Tas-Diary THE ELECTRONIC DIARY

TAS-DIARY for the ZX 48K Spectrum and microdrives.
Cassette **£9.90**

Keep an electronic day-to-day diary on microdrive! TAS-DIARY includes a clock, calendar, and a separate screen display for every day of the year. Invaluable for reminders, appointments, and for keeping a record of your day. The data for each month is stored as a separate microdrive file so that your data for a year is only constrained by the microdrive capacity. TAS-DIARY will work for this year, next year, and every year up to 2100! Supplied on cassette for automatic transfer to microdrive.

Tas-Spell THE SPELLING CHECKER

TAS-SPELL for the Amstrad CPC 464 and 664 running TASWORD 464-D and for the CPC 6128 running TASWORD 6128
disc **£16.50**

TAS-SPELL checks the spelling of TASWORD 464-D and TASWORD 6128 text files. TAS-SPELL has a dictionary of well over twenty thousand words which are compared with the words in your text file. You can add your own specialised words to the TAS-SPELL dictionary. Please note that TAS-SPELL will only work with TASWORD 464-D and TASWORD 6128.

Available from good s

Tasman

SOFTWARE

Springfield House, Hyde Terrace, L

TASWORD 464-D

THE WORD PROCESSOR

TASWORD 464-D for the Amstrad CPC 464, 664, and 6128
disc **£24.95**

This is the new TASWORD especially developed to utilise the capabilities of the Amstrad disc drives. A major new feature is a powerful mail merge facility. TASWORD 464-D will only run on, and is only supplied on, disc.

TASWORD 6128

THE WORD PROCESSOR

TASWORD 6128 for the Amstrad CPC 6128
disc **£24.95**

TASWORD 6128 utilises the additional 64K of memory in the CPC 6128. This gives text files that are over 60K long. TASWORD 6128 includes mail merge and all the other features of TASWORD 464-D. With a new notepad mode and other additional capabilities TASWORD 6128 is the most powerful of the TASWORDS.

TASPRINT 464

THE STYLE WRITER

TASPRINT 464 for the Amstrad CPC 464, 664, & 6128
cassette **£9.90** disc **£12.90**

Can be used to print AMSWORD and TASWORD text files in addition to output from your own Basic programs. Drives the Amstrad DMP-1 in addition to the printers listed on the opposite page.

PRINTER CABLE FOR AMSTRAD CPC 464, 664, and 6128 **£9.90**

COMMODORE 64

TASWORD 64

THE WORD PROCESSOR

TASWORD 64 for the Commodore 64
cassette **£17.95** disc **£19.95**

Many Commodore 64 owners have asked for this product which is now available. All the well known TASWORD features plus eighty characters per line on the screen! This is the only word processor for the Commodore 64 giving eighty characters per line on the screen — so that "what you see is what you get" on eighty column printers.

TASPRINT EINSTEIN

THE STYLE WRITER

TASPRINT EINSTEIN for the Tatung Einstein
disc **£14.95**

Print TASWORD EINSTEIN text files in one or more of the TASPRINT fonts.

SINCLAIR QL

QL is a trademark of Sinclair Research Ltd

TASCOPY QL

THE SCREEN COPIER

TASCOPY QL for the Sinclair QL
microdrive cartridge **£12.90**

TASCOPY QL adds new commands to QL Superbasic. Execute these commands to print a shaded copy of the screen. Print the entire screen or just a specified window. TASCOPY QL also produces large "poster size" screen copies on more than one sheet of paper which can be cut and joined to make the poster.

TASPRINT QL

THE STYLE WRITER

TASPRINT QL for the Sinclair QL
microdrive cartridge **£19.95**

TASPRINT QL includes a screen editor used to modify files created by other programs, such as QUILL, or by the user from Basic. These modified files include TASPRINT control characters and may be printed, using TASPRINT, in one or more of the unique TASPRINT fonts.

MSX 64K COMPUTERS

TASWORD MSX

THE WORD PROCESSOR

TASWORD MSX for 64K MSX computers
cassette **£13.90**
MSX PRINTER CABLE **£8.00**

With all the features of the Spectrum TASWORD TWO including the amazing sixty four character per line display. The TASWORD MSX machine code program utilises the 32K of memory not normally available to Basic allowing over five hundred lines of text to be held in memory. The cassette includes a version of the program that can be transferred to disc.

TATUNG EINSTEIN

TASWORD EINSTEIN

THE WORD PROCESSOR

TASWORD EINSTEIN for the Tatung Einstein
disc **£19.95**

A sixty four character line display and the ability to hold over five hundred lines of text at any time are just some of the features of this TASWORD for the Tatung Einstein. Full interaction with the disc system — e.g. TASWORD detects the presence of added drives and allows their use.

Edit...

A word from the Editor

EUREKA: MICROSANS FRONTIERES

ALMOST EXACTLY FOUR years to the day that the 32K BBC model B first beeped to life, Acorn has stopped manufacturing it for the U.K. market. In contrast the excitement the machine caused when it first appeared, it has been quietly slipped out of production with Acorn reluctant to admit the fact.

Of course you'll still be able to pick up a 128K BBC Plus or the 64K Plus offered with a £30 64K upgrade.

Despite its £400 price tag, and thanks to its high performance, solid construction and the vitally important "BBC" badge, the model B became the standard computer for education. It has also kept thousands of home and professional users happy for years. Obviously the larger memory BBCs will try to satisfy those markets for the immediate future, but what is Acorn planning to do to maintain its dominance of the educational scene?

The answer may lie in Europe's Eureka project. It's difficult to be more definite than that because even the European technology ministers concerned don't seem to be too sure what Eureka is.

What is clear is that it's going to be some kind of scheme for high-technology cooperation. And one of the 10 projects to get the OK from the foreign and technology ministers assembled in Hanover recently is Acorn's venture with Olivetti and French electronics giant Thomson. The aim of their scheme is to develop a European standard for educational computers.

The French started the Eureka ball rolling when President Mitterrand proposed the scheme as a European antidote to President Reagan's Star Wars project.

As we reported in our October edition Eureka could lead to a joint European standard for "home information and entertainment" — the Eurohome project proposed by Britain's Department of Trade and Industry. Let's just hope that if it does come about it proves more of a threat to U.S. and Japanese markets than MSX computers.

C5 and you've seen the lot

Just as the "official" biography of Sir Clive arrives — *The Sinclair Story* by Rodney Dale — the great man's tricycle company has crashed again. The holding company, TPD, which took over from Sinclair Vehicles has gone into liquidation with debts of £1 million to creditors other than Sinclair. He has lost £8 million on the C5 and other electric vehicle projects but will get first grab at the £500,000 assets of TPD.

Rodney Dale was given access to company archives when he was writing his book and the result is that he has become closely involved with his subject. He spends much of the book on Sir Clive's early life in the electronics business and the flat screen television. There is a little analysis of why someone who could single-handedly create a market for home computers in this

country should repeatedly be involved in a series of marketing and manufacturing disasters with digital watches, calculators, flat screen tellies and now the C5.

Dale confesses to being surprised at the failure of the C5. His memories of the launch day back in January at Alexander Palace are very different from those who insisted on taking the trikes out of the heated hall into the real world they were supposed to be designed for. The danger and unreliability of the C5 "bobsleigh" were immediately apparent as journalists found themselves hurtling out of control down ice slopes, almost disappearing under the wheels of lorries and having to pedal back up the hill after their motors overheated or batteries failed. A new and decidedly unofficial biography is due out soon.

New Einstein is it a Bohr?

Tatung admits that it is working on new models for next year but insists that new Z-80 machines will be "downwards compatible" with the Einstein, the 64K micro which with colour monitor and disc drive costs £400 not £500 as we said last month. New machines will have 80 column

display, stereo sound and a choice of 128, 256 or 512K memory.

Meanwhile new products on the way for the Einstein include a £30 music package and a similarly priced transformer box which will allow the Einstein to run Spectrum programs.

Hard News

NO NEED FOR 16 BITS

Acorn is putting a brave face on its absence from the High Streets this Christmas for the first time in four years. You may find some Electrons in Dixons — part of the job lot picked up in the Summer but everyone has given up on selling the BBC Micro.

Acorn now admits that the 32K BBC B has been discontinued but against the odds it still insists on trying to sell the BBC 128 without disc drive or monitor for £500. It seems a shame that Acorn has opted out just when companies like AMS with the AMS mouse are extending the frontiers of the BBC to make it a 16-bit WIMP look-a-like.

AMS has introduced a £50 Pagemaker program which allows you to compose a complete page of a school newspaper for instance on a screen including graphics and photographs. There are 16 different founts which give a limited but interesting variation in typeface. The typesetting is crude as you would expect — it justifies but not proportionately — but effective.

Digitised pictures can be loaded and then altered on screen. Another new package for the £40 AMX mouse is the £50 Super Rom/Art program which gives the AMX mouse pull-down menus overlapping colour windows, patterns and an icon in all modes.

DIARY

Bruce's friend Sir Keith Joseph is thinking about closing Keele University which is sad. Bruce you may remember last month argued that Joseph ought to be promoting serious software which is just what the Department of Psychology, at Keele is doing as part of a three year project financed by Rowntree Trust to produced software for mentally handicapped people. The first arcade game designed for the handicapped, Mr Ugh, has already been developed and if you want to find out more about what the Keele Psychologists are up to contact John Hegarty, University of Keele, Keele, Staffordshire.

Acorn's enthusiasm for £1,000,000 order for the BBC from Canada is understandable but it is a small return on the £8 million or so which the company sank into the North American market and which directly led to its collapse and takeover by Olivetti.

Tatung is still smarting from the exposure of its no smiling

(continued on page 23)

'Amstrad piracy' — both sides claim a win

Selling tape copying equipment not unlawful

Who is winning the piracy battle between Amstrad and the British Phonographic Institute depends which paper you read. The problem for BPI which fights copyright evasion was that the double speed tape-to-tape machines sold by Amstrad were being used to copy commercial music — and computer — cassettes. Amstrad sought a declaration that they were legally in the clear but the High Court refused.

Amstrad fails to win audio approval

When Amstrad appealed at the end of October *The Times* ran its law report under the

headline "selling tape copying equipment not unlawful" while *The Guardian* went for "Amstrad fails to win audio approval". The truth seems to be that the Appeals Court ruled that selling products that could be used to infringe copyright was not illegal as such but that promotional material which encouraged breaking of copyrights could causes the crime incitement to break the law.

Soft News

U.S. GOLD LATEST

(continued from page 21)

or laughing policy at the Bridgnorth factory where Einstein micros are made. Now the company is saying that the Taiwanese management only meant the workforce to have a serious attitude when using dangerous machinery.

Our very own Bruce Everiss finds himself in hospital to have an overgrown pimple removed from his face. I asked around the office for suggestions for a computer game to send to keep him happy while he is in. "Wetzone" suggests one cynic "Superhuey" is another idea but most vote for "Way of the Exploding Cyst".

British Telecom's MUD may still be glorious but it is certainly going to be late. The Multi-User Dungeons were going to be officially launched at The London Dungeon — where else? — on November 5 but the blue touch paper is still smouldering because BT cannot find enough spare computer capacity at the moment. The Great MUD Challenge has now been delayed till the New Year.

The people next door are away overnight. Their cat jumps on to their television — as cats are wont to do — which is connected to the computer which is connected to a printer and a disc drive and a modem. Ever careful your neighbours have bought the Product Innovation Spider alarm which is like an octopus with sensitive tentacles that has lots three of its legs and so can safeguard a home computer system from theft. The cat meanwhile starts playing with the wire unaware that "any slight movement of the device will sound the alarm". Result — one scaredy cat and a sleepless night for you as PI reckons that the Spider will let off "an ear-piercing 98 decibel scream" for two hours.

Elsie Dee

Accolade Inc is the newest bright star in the US software firmament. Founded by Alan Miller and Bob Whitehead — both former Atari and Activision pioneers — the company aims to produce high-quality graphics, lifelike games and generally knock your socks off. Thanks to US Gold, the first of these apparently revolutionary programs Hardball for the CBM-64 will be released in the UK in January 1986.

Billed as the most realistic home baseball game ever, it has large lifelike players and three-dimension field views.

US Gold puritans may run a light pencil through some parts of Accolades's raunchy Law of the West, a very funny text-and-graphics adventure.

The third prong of the Accolade assault is PSI-5 — an Elitesque space trade'n zap.

Little People

Many people faced with inexplicable programming problems blame the difficulties not on their own fallibility or obscure operating system bugs but on "little people" living in the machine.

Activision is exploring the widespread belief in Gremlins with its tacky Little Computer People Discovery kit on the Commodore 64. As you would expect this is just a simple game based around a 2½ storey house. Each of the characters is different but according to

Activision's Hugh Rees Parnell — who we are assured is real and not a figment of our imaginations — "they share common attributes such as the need for care and affection, a remarkable aptitude for playing games, the ability to communicate and a love of music."

Activision obviously hopes that Little Computer People will be this year's Cabbage Patch Kids or Pet Rocks. They are giving away deeds of ownership with every hit sold.

QL draw

Impressed by the graphics on Psion's QL Chess? You won't be once you have Psion's Q Draw which allows you to create images using Psion's in-house graphics program.

For £15 Q Draw includes a library of useful shapes and allows you to use "pens" of different thickness on screen. Back with Chess Psion claims that the algorithm their program is based on — written by Richard Lang — is still world champion. But Kasparov need not worry yet. Lang's algorithm can still be beaten by good club players let alone Grandmasters.

Fun house

Ozisoft does not sound like a real name — even for an Australian software house, but CRL claims to have brought Journey, an £8 treasure-hunting game for the Commodore 64, from Ozisoft. Journey features music based on Madness's House of Fun, multi-directional scrolling and hundreds of location.

MEMOTECH IS BEST

In light of the new price cuts the Memotech machines must be the best value on the market — British built, 32/64/128K user + 16K video, 4 channel sound, 32 sprites, 8 widows, fast and powerful Basic, Noddy — new text-handling language in Rom — assembler/monitor, 16 colours, CP/M, very attractive brushed aluminium casing, superb networking, expandable to 512K internally, plenty of provisions for discs — from floppy to silicon, and much, much more.

And don't forget Memotech's attempts to rid the shortage of software by creating — an industry first — the Speculator Rompak which allows a large base of new Spectrum hits to run on the MTX machines.

The tech. spec. of the MTX + it's new prices (MTX500 — £79, MTX512 — £130, and RS128 with twin RS232 — £249 makes it worth a mention. Avid MTX user, Lancashire.

Dear Jeff Minter,

Whenever you appear at exhibitions you are surrounded by throngs of acolytes and groupies. They are easily recognisable by their sixties Haight Asbury appearance and by recurrent strange animal motifs. To be quite blunt you are the biggest cult in the micro industry. Now you have a new fan. Me. And I don't even like your games.

While it is fair to say that you know how to program, it is also fair to say that you couldn't market your way out of a wet paper bag. It must be infuriating to see inferior products to yours selling in much larger volumes, cult or no cult. Ariolasoft, on the other hand, probably think a stack pointer is part of a fork lift truck. This hasn't stopped them marketing themselves to the top of the software house tree in less time than it takes to format a Sinclair Microdrive cartridge.

Your relationship with Ariolasoft is one of the most sensible events this industry has seen for some time. Adam Smith's

divisions of labour proven once again. Both parties benefitting from the other's abilities. True synergy where the whole is greater than the sum of the constituent parts. It is this that has made me a fan.

The Llamasoft/Ariolasoft honeymoon epitomises a trend. Success has increasingly come to those who know what they are. Either programmers or marketeers. Those who try both are a lot less successful. Jack of all trades and master of none. Many who have tried to do both are, unfortunately and somewhat inevitably, no longer with us. Some, luckily, still are. These are the people who should follow your example in order to survive, never mind succeed. Prime among these people are Ultimate. If they wish to continue as a viable entity they have to decide what they are.

Tim Stamper and his gorgeous sister Louise have been the major games software trendsetters. They have produced more influential products than any other

software house. Yet their sales, large though they may have been, have never reflected the true merit of their products. Like you they have seen inferior products to theirs sell in larger volumes. Like you their weakness is not in the programming but in the marketing. They make simple mistakes like putting insufficient perceived value into their packaging, making them the most pirated out of all the software houses. It is about time they realised what they are and acted accordingly.

For a small fee I would be only too glad to put Ultimate in touch with the company best suited to market their products.

Bruce Everiss

Bruce Everiss.

IN TOUCH

How to write for Your Computer

We called this magazine *Your Computer* precisely because we welcome you views, tips and hints and even your criticisms of machines and software in general. Here's how you go about getting you name into print. Your article should be typed, double-spaced, on A4 paper. A name and address on each sheet would help. Don't forget to tell us which machine it runs on. With programs please include a cassette or disc and some indication of how long it is. Please put what

machine it's for on the envelope. Don't forget full instructions to us how to load and list your program and how to enter it for the readers.

The article must be submitted exclusively to *Your Computer*. We pay £35 per published page — that's as it appears in the magazine and includes illustrations.

Telsoft

Telsoft is *Your Computer's* software downloading service. Any program for the Spectrum or the BBC and the Commodore which has a telephone symbol next to it is available on the service. Both 1200 and 300 baud speeds are

catered for. For more details call Colchester (0206) 8068. No more lonely nights typing in hex.

Message service

You can get messages to us in two ways. Either use the Prestel Telex Link to 892084 BISPRES G or you can use our very own modem, day or night on 01-661 8978. The modem is V21, 300 baud, even parity, 10 bits per character. You simply transmit in upper case "YRC" — our address code, and wait for the acceptance code "+++ STF GO". Then off you go. Don't forget to tell us who it's for. Sign off with "NNNN" — again in upper case.

XMAS MICRO

I'm not often moved to writing but after reading November's *Your Computer*. I feel I must point out a few errors in Lee Paddon's article about possible micros for your Christmas stocking. For in that article he states that the Enterprise has very little software and most of them are poor conversions.

While at the time of that article being written there might not have been many available — this is something that has since changed. Saying that they are mainly poor conversions could not be further from the truth. In fact 95 per cent surpass the originals in both graphics, sound and speed. If you are wondering why so many of the

This offer closes on January 31, 1986.

Your letters

(continued from page 25)

titles are conversions, it is because they are so easy to transfer.

For example, the screen can be made to simulate the Spectrum screen right down to being at the same address and pixel layout. Even attribute clashing occurs if a straight dump version is made. Another point is Enterprise has never claimed that it can run MSDOS. All it has ever claimed is MSDOS file compatibility, that means reading and writing MSDOS files and not running MSDOS programs. Any claim that it will do so is a complete fallacy.

DRAWER BUG

Thank you for publishing my 'Drawer' program in the November issue of *Your Computer*. I have, unfortunately recently discovered a bug in the program which causes use of the "Text" mode to corrupt the long-term store. Corrections are as follows:

```
Load the code then;  
POKE 28908,191  
POKE 29221,191  
POKE 29222,6  
POKE 29235,191 then SAVE  
"DRAWCODE" CODE  
25000,5512.
```

This applies only to the program as you publish it, not to the tapes which have been bought directly from myself. Apologies for the inconvenience.

*P A Rhodes,
Luton,
Bedfordshire*

REVIEW VIEW

I would like to make a few comments which relate to Colin Grant's letter in the September issue.

The Spectrum Microdrives are excellent and do compare with some disc drives in performance. I have never lost any data or program kept on them and a recent development project that required me to use them just re-inforced how good they are.

The original QL review stated that the hardware was the best value yet, but I was very concerned about the software. The QL hardware has been

further improved and is perfectly satisfactory, the software also still has one fundamental fault.

The saving and loading times of Basic programs are very poor when compared with the Spectrum, there should have been a routine developed by Sinclair and put in later Roms to enable saving and loading at Spectrum speeds. Although QL floppy discs are quicker, they still do not compare with the Spectrum speeds which is a great pity as virtually all the QL problems are related to this one fault.

It is helpful to see a response to the reviews, good or bad, as it enables me to continuously update the criteria I use to evaluate the machines, and it informs me of any blind spots or prejudices that I might have.

Finally, remember it is only my opinion, based on a standard set of tests that I have developed and apply to each machine reviewed. The object of the exercise is to inform the reader of any shortcomings, extra facilities and of the perceived value for money. On a low cost machine, the fact that there are omissions is not surprising and should be taken in context.

K D Peel.

AMSTRAD TALE

Just thought I would relate a tale of one computer user who is not only happy with the machine he bought but who is over the moon with the after sales back-up which is available. The machine is the Amstrad CPC 6128.

I was one of the original ZX81 owners (well I was looking for something to run my power station for me).

Even as I type this, I recall with horror the days I spent trying to get through to Sinclair's one, permanently engaged telephone line, only to be told when successful that I had got the wrong department and could I try another number...four days later I finally got through to the right number only to be told that there was nothing wrong with the Rom — perhaps I should see a psychiatrist instead — I had a perverse satisfaction when some time later they had to admit that there was a fault in

the Rom and had to replace half a billion or so that were in circulation already at their own expense. Never mind, after learning the hard way, I vowed that I would postpone upgrading to a better machine until I was certain it would be the right one.

The Spectrum passed me by as did the QL, the Acorn, the Enterprise (with the gestation period of an elephant) I congratulated my cynicism when I saw the mess the QL got into, (they only had to ask and I would have told them beforehand).

The CPC 664 arrived, oh no, could I resist...just, I bit the bullet and waited. The CPC 6128 arrived and I knew this was the one I had saved myself

for all those years. It was everything I wanted and more. I couldn't believe the price, the speed of the Basic, the manual....the everything. On top of this when I had a slight problem with running a program designed for the 464 — not a software compatibility problem but due to a rearranged keyboard configuration on the 6128 — I phoned up Amsoft, and got through first time, they put me on to Cliff Lawson one of their boffins.

He said "Oh yes there is a problem, I'll sort it out tonight at home and phone you with the solution tomorrow". And guess what....HE DID!

COMPUTER MAGIC-THE FACTS

I would like to set the record straight, with reference to an article on page 20 of the November issue of YC.

First, I would like it known that I am not in competition with the Magic Circle and/or with other members of the magic fraternity — of which I am a member — concerning "Computer Magic". Though it is true that is known that I am an exponent of this form of entertainment.

I would also like to point out that the name Sardi's is not a

software house. In fact it is the name of my representatives as a professional entertainer, and have no links with the computer magic aspect as was reported in *Your Computer*.

The article in question, seems to have been written without all the facts, that were an offer to the publishers. I feel strongly that it was also detrimental in any respects to both Sardi's and myself.

Redbridge,
Essex*

A Flash Of Genius!

THE NEW 64 MULTIMODEM

**GIVES YOU DATABASES, BULLETIN
BOARDS, ELECTRONIC MAIL,
PRESTEL — ALL ON YOUR
COMMODORE 64 OR 128**

At last! The perfect modem for your
Commodore* 64 or 128, giving you
access to Prestel*, Micronet*, viewdata
and a host of other services — plus
user-user communications.

It couldn't be simpler. The 64
Multimodem has autodial and
autoanswer, with all comms

software on-board in ROM. 64 Multimodem fits
your Commodore's cartridge port, and has just
one external connection — the telephone
lead.

The 64 Multimodem is menu driven and
multispeed, with CCITT V21/23 and Bell
103 standards, handling baud rates of
300/300, 1200/75 and 75/1200.

Functions include save and
print frame and automailbox
with edit and save.

**Buy your 64 Multimodem now and
we'll give you free introductory
subscriptions to Micronet and
Microlink*: an unbeatable package
at an unbeatable price — it's pure
genius!**

£98.50

HARDWARE HITLIST

CHALLENGER

► Opus • Disc drive • BBC • £249.95

A Ram disc is a popular facility in disc operating systems. This unit takes the process a stage further by giving you 256 Ram contained within the drive unit which is configured as an extra disc drive. For an extra £70 you can have a further 256K Ram disc.

You also get Opus's highly regarded DDOS. This features single and double density storage, a host of extra commands, an expanded directory arranged as a series of volumes, and it doesn't tie up any system Ram (page is set at &E00).

The most startling use of a Ram disc this size is in programs which use random access files during the execution of a program. A prime example of this is Viewstore, a new data base from Acornsoft. Using Challenger, you will not notice the program updating the disc contents. Then when

you've finished, you simply backup the Ram disc to the floppy disc and turn off.

Another application is for displaying large amounts of graphic data. The pictures can be pulled off disc virtually instantly. In strict performance terms, use of the Ram disc is around 20

times faster than most floppies.

Perhaps the only cloud on the horizon is software compatiability. Some protected programs won't load using Challenger. Challenger is available from computer dealers or direct from Opus on Redhill 65080.

• Challenger disc drive from Opus

HS-S1

► Amstrad • Serial Interface • Honeysoft Ltd. • £29.95

Honeysoft is a small company specialising in Amstrad add-ons. Its serial interface allows the Amstrad to be connected with serial printers or modems.

Two channels are supported over the usual range of baud rates. Word length and parity can also be set. One of the channels can use split baud rates and hardware handshaking, the other uses purely on/off protocols. The board is compact and well made with a full 25 way connector and an extension socket for further add-ons.

You can control the board under CP/M or by using Basic commands available on Rom, disc or cassette.

Honeysoft intend to support this board with Viewdata and Bulletin board software. Only preview copies were available with the review sample, but hopefully the final version should be available later this month. The pre-release version was easy to use, with most commands being accessed by menus overlaid on the page currently

displayed. Two screen modes are available, mode 0 uses all eight colours, but the text is rather compressed, but still legible. Mode 1 has the normal character set, but the colours have to be fudged by stipling.

Other facilities planned will be familiar to Commstar owners, with pages held in memory, screen dumps of either text or graphics, saving and loading pages, tagging pages and clock. The system will be compatible with the new Micronet downloading service.

Again this software will be available on Rom, disc or cassette for around £20. It is

hoped that future upgrades will include colour screen dumps and off-line mailbox editing. If all that is promised is delivered, then this looks like a very promising product indeed. The serial board is also compatible with Amstrad's own interface.

• Honeysoft's serial interface, the HS-S1

TR-1

► Spectrum • Printer • Saga Systems • £149.90

Printers at this end of the market are generally thermal printers using expensive paper, or rather nasty dot matrix jobs. This product represents a notable first giving real letter quality. printing for under £200.

It takes plain A4 paper (but won't take continuous forms). The head consists of five

character wheels spinning past the paper. The noise level is about the same as a daisy wheel, with bi-directional printing giving a print speed of around 10 cps.

The printer has a standard Centronics interface, and can also accept serial data through unused pins on the parallel port.

The prices quoted for the Arnor products in last month's issue were incorrect. The Rom card is £15.95. Utopia is £29.95 and Protext is £39.95 on Rom. These programs are also available on disc and cassette.

Christmas

Computer prices fall every year but this Christmas brings some really outstanding bargains. In some cases home computers are being sold for a half or even a third of their original price. For example, in January 1984 the Atari 800XL cost around £250. On top of this you needed to fork out £50 for an Atari cassette recorder. Now you can buy the machine for £100 with a cassette recorder, joystick and 10 programs thrown in for good measure.

£100, in fact, will buy you a micro with 64K Ram, colour, 3 channel sound, and a graphics resolution of at least 256 by 192. To put this price in perspective consider that in 1981 the 16K ZX81 — a machine with a bald keyboard and chunky black and white graphics — was rated a bargain at £120.

All the micros listed cost less than £180. Where the machine is sold in a package which includes a cassette recorder and joystick, the all-in price has been given. Usually it is substantially cheaper than buying each item separately.

Computers in this price bracket are suitable for the first-time buyer who wants to use a computer mainly for recreation. If you have a more serious application in mind you would do better to look at the micros covered in last month's guide. It is certainly possible to use a Spectrum for wordprocessing or keeping your accounts; but to do this you need to add a printer and a disc drive, along with appropriate interfaces.

Deciding which computer to buy partly depends on what you intend to do with it. People tend to justify their purchase by telling themselves that they will learn to program or that it will be useful for Junior's education. A few months later nine out of ten owners use their computer solely for playing games on. Fair enough, but it is unfortunate if there is not much software available for your machine. It may be a commonplace to say that a computer is only as good as the software that runs on it, but it is worth repeating nonetheless.

If you are interested in programming, a good keyboard

Simon Beesley looks a cheaper buy for Christmas.

and a fast, extensive version of Basic are features to look out for. Even programmers, though, need commercial software in the form of programming utilities, assemblers or other languages. So the question of software availability is important here, too.

The specifications of the 11 machines under £180 are given in the table. There is also a brief comment on each micro, which summarises its pros and cons. We have not thought it necessary to provide a list of peripherals. Printers, disc drives, modems, light pens, speech units, and other add-ons, are available for most of these machines.

Atari 800XL: Possibly the best value of all, for its robust keyboard, superior graphics, and high quality games software. Not as many news titles are released for the Atari as for the CBM-64 or Spectrum. But since it is compatible with earlier models there is a large range of programs already available.

Atari 130XE: More memory for your money than any other micro in this price range. Memory aside, it is almost the same as the 800XL with which it is software compatible. And as the processor can only handle 64K at a time the extra memory is only a minor improvement. It is unlikely that much commercial software will take advantage of it.

Commodore 16: Why Commodore chose to introduce a new micro which could not run CBM-64 software is a total mystery. Now superseded by the CBM 128, the CBM-16 will soon sink into oblivion.

Commodore 64: Top of the table as far as games software is concerned. Only the Spectrum can boast as many titles, but the CBM-64's superb sound chip and superior graphics give it the edge quality-wise. Let down by a poor version of Basic.

Commodore Plus 4: Usefully includes four business programs, themselves not really

From the top: Memotech 500; Atari 800XL; Enterprise; JVC MSX; Spectrum +. Opposite: Canon V-20 MSX; BBC Electron.

buys

powerful enough to make the Plus 4 a practical proposition as a business micro. It has received almost no support from third party manufacturers and software houses — and as a games machine it is a non-starter.

Electron: A crippled version of the BBC micro, the Electron suffers from insufficient memory and a shortage of ports. Its major asset is BBC Basic, although it is too slow to run most BBC software.

Enterprise: Although technically superior, the Enterprise was launched too late in the day to have much success. Limited software.

Spectrum: Tacky keyboard, poor construction, and feeble sound facility. Yet the Spectrum's popularity has ensured that a massive amount of software has been written for it. A good machine to get started on.

Memotech: Both the 500 and 512 are well made machines with remarkably high specifications for their price. Unfortunately they have not had the success they deserve, and as a result only a limited amount of software is available. Adding a disc drive to the 512 solves the problem by allowing you to run CP/M software, although most of it for business users only. If you are not interested in games the Memotech is one to consider.

MSX: Cannon, Toshiba, JVC, Sony, Mitsubishi, Yamaha, Spectravideo, in Rom, but the programs Goldstar, Sanyo and Panasonic, all make computers that conform to the MSX standard. The idea behind it is that by building computers to the same specification they can all run the same software. Too bad that the specification settled for was rather a dull one.

OVERALL RATING

● ● ● ● ● ● ● ●

In the mythical kingdom of Covent Garden, once people by a fair race, a band of strolling software magicians, known to story-tellers as Ye Edge, conjured up a corny sub-Tolkein plot to accompany a truly wonderful arcade adventure — Fairlight.

But once you're inside the dubious-sounding Castle Avars you soon forget about background details like the land of Fairlight slipping into chaos and darkness. The graphics are excellent, better in some ways than Ultimate's latest offering Nightshade. The Edge put it down to "The 3-D Worldmaker Technique".

Whatever you want to call it, the result is good, smooth animation in two colours.

As with all the best games the idea behind it is simple. You, Isvar, must escape from the castle by finding The Book of Light. There's also the standard hooded old man of mystery who presumably gets out when you do.

The idea may be simple but escaping isn't. Collecting the right items is the only way of mapping out the castle's 80-odd ogres. Finding the objects isn't too bad — the early ones at least. The problems start

when you have to work out what to do with them.

The scroll is the sorcerer's equivalent of an ejector seat; when the going gets tough it'll plonk you down in the relative safety of the courtyard. The bag of gold is handy for bribing certain guards, while food, keys and magic potion should all be fairly self-explanatory.

To reach certain objects like the egg timer requires a lot of shoving and stacking of furniture. Addicts of Ultimate's Knight Lore and Alien 8 will really feel at home.

The booklet with the game

suggests that you examine the cover, opening screen and text for clues. To me the cover showed a wizard loosely resembling Edge boss Tim Langdell reading a radioactive *Your Computer* binder. The opening screen did however give a few hints; it gives you an aerial view of part of the castle, for example.

Apart from its graphics and complexity, it's touches like Isvar's five pocket and the weight restrictions on what you can carry that make this such a good game. Should keep you happily gnashing your teeth for hours.

SCREENS

● When the going gets tough in Fairlight a scroll will help you get going again.

3D GRAND PRIX

► Any Amstrad • Amsoft • Racing Game • £9.95 • Lee Paddon

Well, if Nigel Mansell can win a Grand Prix, I suppose anything's possible. So perhaps a few laps of this might show you if you've got what it takes.

You get a cockpit view of the track ahead, with rev counter, speedo, temperature gauge and wing mirrors. You get eight circuits to tackle in turn. You have to finish in the top three of one race to proceed to the next. The opposition starts easy and gets tougher as you go on.

The car has four gears, accelerator, steering and brakes. The steering is of the usual digital variety, and rate of turning depends on speed. If you corner too sharply, you spin off. The usual Pole Position tactic of overtaking on the grass gets you nowhere fast, and the other

cars have a nasty habit of blocking you. The temperature gauge limits the amount of time you can go at full pelt, overheating produces a dramatic loss of speed.

As far as a simulation of a race goes, this one slots in somewhere between Pole Position and Taledaga, but that said, it is easily the best racing simulation for the Amstrad.

HACKER

► CBM-64 • Activision • Hacking • £8.95 • Lee Padon

Possibly about the worst thing you can do if you want to play this game is read a review of it. After loading up, you are left with the

enigmatic message "Logon:", and that's it. No instructions, no hints, no nothing. Thus, if you read a review, you will end up knowing more about

the game than was intended, and discovery is half the fun.

What it boils down to is trudging around the world in your little gismo — or SRU if you prefer — negotiating with spies, piecing together documents and acquiring information about the network you have penetrated.

Is it a simulation of hacking? Well, yes, in as much as that is possible. It is the same combination of logic, inspired guesswork and lucky breaks. Is it fun? After all, one of the main motivations for hacking is you are doing something illegal, you don't get the same thrill with Hacker. Still, there are enough problems to solve in what might be termed an electronic adventure game to keep most would-be hackers happy and it'll keep the phone bill down.

CRUSADE IN EUROPE

► CBM-64 • Wargame • US Gold • £23 • Lee Paddon

"All very clever, but it's not really a simulation," has until now been the stock response of tabletop wargame enthusiasts to the computerised variety. However, this game is going to set a new standard, with an outstanding combination of realism and playability.

The game simulates the campaign in North-West Europe, from the D Day landings to the Battle of the Bulge. This can either be done in a series of scenarios tackling the major battles, or as a continuous campaign covering the four months to the beginning of October. The screen shows the units involved in the battle, the terrain, any enemy units you are in contact with, a text

window for messages, and a cursor for entering commands.

To enter a command, you place the cursor over the unit, and press fire. This gives a detailed picture of the unit's current status, its strength, deployment, combat readiness and supply state. You can then proceed to give it orders. There are no separate phases for giving orders, it is all real time, you just give the orders and the units get on with it. Supply considerations take two forms, individual supply, where a check is made every day to determine whether the unit can be supplied, and overall supply, where the amount of supply used is calculated and compared

with the amount of supply flowing in. This can restrict the amount of activity possible. All this detail gives a great feel of overall command. You give the orders while remaining unencumbered by the detail, free to keep a strategic view of the whole situation.

The game can either be played against the computer, or a human opponent. It can be weighted to one side or the other, and, at the end, the computer assesses the

SCHIZOPHRENIA

► CBM-64 • Quicksilver • Platform game • 7.99 • Toby Wolpe

This game rates as high in paranoia as it does in frustration. Why is Quicksilver out to persecute me by making it so difficult to play?

Everything you do in screen 1 of this five-screen game is quickly undone by the evil side of Alphonse T Nurd — the other half of your personality. You, the good Alphonse, are a lab cleaner. But instead of just dusting the Atomic Particle Separator, you apparently tried it out on yourself — with personality-splitting results.

The only way of becoming whole again is to make it as far as screen 5 and the Recombination Chamber.

Forgetting the frustration factor for a minute, Schizophrenia has several good original features, like the fact you have to flick two switches on the first screen to stop the timer and start

the score clock running.

The score has to be greater than the time you've taken to rack up any points. You score by drawing the four bolts on the great doors that lead to the next chamber. The catch is that your alter-ego is busy flicking the switches back again and sliding the bolts shut.

To get through the lifts and yellow boxes of screen 2 you have to follow Alphonse II around area 1, flicking switches and pulling bolts and then making a rush to the right-hand lever to open the doors.

The graphics are reasonable with a traditional platform game side-on view of the action. But the animation isn't wonderful. The characters prance around the screen like demented Morris men. Even if you're walking along a flat platform, the movement's the same as walking up stairs.

A good, original approach to mental illness which should drive you mad even if you weren't to start with. But I'm in two minds whether to recommend Schizophrenia as a great game.

WHAM — THE JUKE BOX

► ZX Spectrum • Melbourne House • Music utility • £9.95
● Tony Sacks

There used to be one inviolable certainty to cling to in these changing times — the immutable fact that the Spectrum has just one sound channel. But now even this sacrosanct truth has been rudely, and noisily, shattered by this devilish bit of software which gives the Spectrum two sound channels using the original hardware.

Wham — no connection with the George/Ridley duo, you may be relieved to hear — allows you to compose separate bass and melody lines over a four-octave range and even to include vaguely drum-like effects (but not simultaneously with the notes). Notes are entered and displayed on musical staff and, as they are being

played, the notes are depicted by dots bouncing around on a piano keyboard.

The hideously named Whampiler allows you to use the tunes you compose to enliven your own programs. The compiled music takes up less than 1K of memory, no matter how complex it is.

One snag is that all the notes have to be the same length, although rests can be inserted between notes and the tempo of a piece can be varied.

W-TJB will probably appeal most to programmers wanting to add music to their graphic masterpieces; as a stand-alone music-making package its staying power is questionable.

VALUE FOR MONEY

● ● ● ● ●

SCREENS

● Battle of Britain — phew against the many Hunnish hordes.

In this, the latest in PSS's wargame series, you take the part of 11 group controller, directing "The Few" against the Hunnish hordes. The display shows the position of incoming raids, any squadrons you have scrambled, as well as the position of airfields, radar

stations and towns in south-east England.

You must attempt to repel the Luftwaffe raids while maintaining the RAF in fairly good nick. In the air, you can be sure of a loss rate of about five to one, but the risk is getting caught on the ground whilst refuelling,

which will lose you half the aircraft on the field. This leaves the player with a nice dilemma of how many squadrons to commit to dealing with each raid.

As is obligatory with this PSS series, you can have arcade sequences where you fight one of the battles, as usual you are not entirely sure what you are doing and it is best to ignore it. There are three scenarios: introductory game, Blitzkrieg, and campaign game. The campaign game broadly follows the pattern of the German campaign, with initial raids on the radar system, followed up by attacks on the airfields.

At the end of each day you get a number of replacements to make your squadrons up to strength.

Definitely the best offering yet in this series, with lots of historical flavour and attention to detail.

SATELLITE WARRIOR

► Amstrad • Amsoft • Trading Game • £7.95 • Lee Paddon

Coming close on the heels of adventure games and Star Trek, Hamurabi and its variants has a long and distinguished history; this game represents a new variation on the familiar theme.

You play either against the computer or another player, the idea is to colonise the solar system with satellites and exploit its economic resources, and thus build more satellites and so on. You are also visited by aliens who can trade you items which you don't produce, there is no direct trading

between the players. Regretably, when two players attempt to exploit the same planet, the satellites must duel to the death.

There are three varieties of weapon for use at different ranges, and three types of defence.

The game's overall tone is light hearted, with jolly bug eyed monsters and defeated satellites falling to bits like an MoT failure in the fast lane. Victory is all about getting the bits you need to make really nasty satellites.

THE COMMODORE 128 HARD FACTS ABOUT THE SOFTWARE.

PAZAZZ

Have you ever wished you could create a whole theatrical performance of your own? Do you have your own ideas about scenery, costumes, music, choreography...? Now you have the opportunity to try out your ideas, and to experiment with different effects, and to develop a performance that the professionals would be proud of.

Using PAZAZZ you can:

- * design scenery
- * design costumes
- * write music, and
- * choreograph the action.

Four complete performances are included in the package to get you started; after that it's down to you and your imagination. So come on all you budding National Theatre Directors, it's never too soon (or too late) to start.

COMODORE 128
PERSONAL COMPUTER APPLICATIONS

Script 128 is the intelligent, fully professional word processor for your Commodore 128. It offers you all the usual advantages of word processing — cut and paste editing, mail merge, tabs, search and replace, print preview, plus other advanced features such as an arithmetic function for totalling rows and columns, a second text area, wordwrap, 80 or 40 column display, and customized printer output with programmable options.

- Some of Script 128's powerful features:
- Menu driven operation throughout — with shortcut commands and options for time saving.
- Print preview providing instant feedback on layout changes.
- Two text areas in 128k machines, allowing two separate documents to be held in memory simultaneously.
- Support for all main printer types, and customising to suit individual user's printing requirements.

PERSONAL MONEY MANAGEMENT

Personal Money Management helps you make the money go round. It is a straightforward, simple-to-use budgeting program for personal finances with which you can control your domestic cash flow and make the most of your income. With Personal Money Management you need never again be caught by the unexpected bill and no money to pay it.

The program is extremely easy to use. You enter your income and expenses, and Personal Money Management calculates your total annual expenses together with the amount you need to set aside each month to meet those expenses. In this way no bill can arrive that you do not have the money to pay, and the money you have set aside is working for you earning interest in a bank or building society account.

Personal Money Management makes planning and budgeting easy, no household should be without it.

MULTI SO

PERSONAL MONEY MANAGEMENT

After the cult status bestowed on the original, this sequel has been eagerly awaited. This time, your old adversaries, the Myons, are bent on destroying a bunch of satellites. You have to protect them by destroying wave after wave of Myons before they have time to wreak havoc.

Between waves, you get a chance to repair either the ship or some satellites. Your ship also has two droids which can make running repairs in combat. The instrumentation is complex with scanners, battle computers, status indicators and so on. Combat consists of warping towards the enemy sector, and then once there, you close in on them using your scanners, and then do a spot of dogfighting.

Damage occurs when you take hits, or collide with the enemy. There are numerous

systems all over the ship; damage affects the operation of the ship to a varying extent, and you must decide what gets priority for repair.

Despite all this fairly complex stuff, the guts of the game is shooting Myons and a pretty uninspiring bunch they are too. They come in a variety of shapes and sizes, some with

cloaking devices. But really, these days we expect our aliens to be three-dimensional and have a bit more grey matter. This game is in many ways a step backward from the original. Brewster fans were expecting a lot more.

● Head-up display, target computer and air attack radar in Strike Force Harrier.

STRIKE FORCE HARRIER

► BBC B and Electron • Mirrorsoft • Flight Simulator • £9.95 • Lee Paddon

Still playing Aviator? Well at last Mirrorsoft have come to the rescue of Beeb owners still dementedly flying under bridges and shooting space invaders with their Spitfire.

This will take a bit of getting used to for the seat-of-the-pants crowd. The 'plane actually tries to help you to fly it with useful little warnings like "you are about

to hit the ground" and "someone is shooting at you". Unfortunately, most of these warnings are accompanied by some of the most ear splitting sound effects witnessed in this office for some time. Definitely one to get the neighbours hammering on the wall during late night sorties. The avionics are very nice with a full instrument

panel, Head-Up Display, target computer and air attack radar.

Unfortunately, there is a price to be paid with rather dismal graphics in the way of ground detail and enemy aircraft. The scenario is rather bizarre. You have to destroy an enemy base. In order to do so, you must move through enemy territory knocking out tanks, SAM batteries and aircraft. Having prepared the ground, you land and call up your ground staff to repair and refuel your aircraft.

This you repeat as often as necessary to reach the base. The most exciting feature is the "Viff", or vectored thrust, which is faithfully reproduced. This is not only handy for vertical takeoff and landing, it is also comes in useful in aircombat. Another nice feature is doing high-G turns on the higher levels will cause black-outs (instruments not recommended). All in all, one the flying addicts will want to add to their collection.

● Tomahawk —
Flight International
likes it.

● Right: Dave
Marshall, author of
Tomahawk.

● Below: The real
thing — an AH-64A
Apache helicopter.

Over 7,000 ground features and some of the best wire-frame 3D graphics this side of Novagen's long-awaited Mercenary, Tomahawk puts you in control of the US Army's latest attack helicopter, the Apache. Promoted by Hughes as "an extension of the pilot's will", it's appropriate that the Spectrum simulation of such a hi-tech heli marks the commercial debut of the Lenslok protection system. This, of course, is a game in itself — hours of fun to be had squinting through a plastic lens at the VDU guessing at the combinations of any two letters of the alphabet.

Once past this hurdle, you can open the throttle, ease forward on the collective, and leave the pad. As the 3D world display unrolls you will see landing pads, buildings, trees, transmission pylons, mountains, enemy tanks (moving and firing), field guns, and airborne enemy helicopters.

A number of mission scenarios are available to you: flying training or combat, with different difficulty levels, you can select a low cloudbase of a night mission. In this last you can try out the infra-red vision - same game but in red and black. The display will be familiar to aficionados of DI's Fighter Pilot, but is much more than an enhanced version. All

helicopter characteristics are faithfully reproduced; slowing down is best achieved by use of the cyclic pitch controls rather than reducing throttle

level — you tend to plummet — and you can fly sideways or backwards. Weapons include eight Hellfire missiles which automatically destroy anything in your sights plus 38 unguided rockets and a machine gun. The Target Acquisition and Designation System tells you whether your target is friend or foe — most modern military hardware has a built-in identification signal.

The system has been designed with Interface 2 in mind, so that it's possible to fly like a real helicopter pilot using one joystick for throttle control, the other for altitude control.

Much more accessible to the casual player than Fighter Pilot, what more can I say than that our fellow-journalists on Flight magazine have, over a cup of coffee, voted this one of their favourite games.

● Colossus Chess 4.0 — for the budding Kasparov.

With the scalps of major chess programs like Sargon, Superchess, Cyrus and White-Knight to its name, Colossus 4.0 has the power and quality of play to keep most amateurs busy for hours.

Add to that a comprehensive list of features ranging from elapsed-time clocks to blindfold chess and you're certainly getting your money's worth.

The chess diagram-like view of the board leaves no margin for confusion although in terms of graphics sophistication it's a long way behind Psion's spectacular 3D QL Chess. You pick your move by placing the cursor line over a piece and then on to its destination.

There's also a joystick option, or if you're happier working in algebraic E2-E4s then you can just bash them in directly from the keyboard. As in all the best chess programs you can also back-step through up to 120 moves using B, or forwards

with F. A quick poke at the R key gives a full action replay.

You have six playing modes to choose from. They range from Tournament with its four time controls, through Average mode where you can pick the computer's response time, to the Equality, All-the-moves, Infinite and Problem modes. Colossus always starts off in Average mode unless you specify something else.

CDS claims an opening

repertoire for Colossus of 3,000 positions which means if there is to be any agonising about the opening moves it's you who does it.

Colossus presents you with two screens. One is text only, and gives you details of the moves played so far together with the program's thoughts on possible lines of play and times. The second screen holds the graphical picture of the board. You can flick to and fro from one screen to another with a tap of the space-bar.

● Marsport — you'll feel like a ninepin in a skittles alley.

If you ever wanted to know what a ninepin feels like in a skittles alley then Marsport is the game for you. There you are doing the usual Dun Darach Tir Na Nog bit clomping around like Piltdown Man but this time in a space bubble on Mars rather than in some medieval marsh.

Every so often a bowl hurtles by at head height — but just for once in a computer game you don't have to duck, for these are harmless information gathering robots.

Previous Gargoyle games were a bit thin on plot, but Marsport is an intricate and well structured arcade adventure with much more going on. In the first stage of the game you — or rather Commander John Marsh of the underground Earth liberation movement Hasp — have to acquire a power

weapon and fight your way through the 10 levels of the city trying to locate the central computer.

A series of hatches in the walls open as you walk by. These can be supply units for which you sometimes need a key which give you objects to use, lockers which you can stow your objects in — because you can only carry three at a time, bins, and charge units to keep your gun loaded.

You need the gun to deal with robots and Septs — the invading life-forms which Gargoyle politely calls a hive culture but which we all know is really just a swarm of intergalactic killer bees. But then I suppose the Septs would call Commander Marsh a terrorist (Geddit?).

The most fearsome adversary in the game is a Sept Warlord — which looks just like a Victorian vacuum

cleaner and is almost as dangerous.

The robots that occasionally attack you are malfunctioning warden robots installed by your own forces long ago. If only they belonged to the other side we could call them septic tanks. Once you have reached the computer you can start your search for the original plans for the giant force field which is all that stands between the Septs and Earth and now needs strengthening. Your final challenge is to escape with the plans.

Trashed my strike craft in a rock outcrop — anybody knows what that means out here. As the wreckage bounced away from me I punched the button on my jet pack and got sky-side just as the sand-worm reared its ugly head a few feet from me. Back to the pressure-dome for a new ship — losing your no-claims bonus is bad enough but when aliens have infiltrated into your power-plant in a bid to make it meltdown the local star-system you don't worry so much about that kind of thing.

Brilliant graphics and an original enough game concept programmed by Simon Francis. Durell have a real winner here. The screen shows an aerial 3D view of a barren desert landscape, cheerful tunes play in the background (if you can hear them on your Spectrum). Fly your surface skimmer towards the right hand side

of the screen. Try not to hit any rock outcrops or UFOs otherwise you spin off like a drunken dodgem driver. Too many smashes and your ship blows up — this effect is particularly good with all the bits bouncing all over the place. An arrow at the base of the screen indicated where the nearest pressure dome is. Get into the vicinity and you are sucked in.

The dome then bifurcates and releases you in your new skimmer. Paul Atreides would be at home on this planet since giant Dune-style sandworms rear their ugly heads and reduce your energy if you bump into them. Dull it isn't. You can shoot back at attacking vehicles although many of the phenomena which assault you are indestructible and very very persistent. A swarm of diamond-shaped objects is generally the finishing element for people trying to penetrate the outer

wall of the power plant, where all the real fun with the enemy counter-attack vehicles begins. Excellent and also available for Commodore.

Simon Francis learned about commercial software the hard way. He wrote a couple of games for the Dragon 32, and his "friends" persuaded him to take his name out of the program. Due to the Dragon's later demise, he thought no more about it until he saw his program being marketed by a large budget software company at a *Your Computer* show. "I haven't been ripped off that much. If it had been for a really popular machine like the Spectrum or the 64 I would have lost thousands of pounds. Still, they're not my friends anymore."

There are a thousand stories like this in the software city, but this may have been a contributory factor in forcing Simon to wean himself off the 6809 processor. "I loathe the Z-80." This should give heart to hard-done-by Dragon owners everywhere. Fighting his revulsion with its CPU, Simon started the Spectrum game as a small window at the top left-hand-side of the screen, using interrupt mode 2 to print up all the characters, first in memory, then to the screen.

"When I expanded the screen up my memory dump was 6K — obviously any larger would be too much memory so I had to modify all my routines accordingly." The main core of the game is written using the latest techniques — "You can usually work out what's going on in the programming just by looking at the screen. I sometimes videorecord games, play them back at different speeds — tells you lots of things." Simon gives full credit to Durell colleagues Robert White and Dave Cummings. Julian Breeze did the music — "It would have taken me 10 years to do it."

THE FASTEST GAME ON TWO WINGS! AND A FREE MULTIFUNCTION CALCULATOR WATCH

The AIR COMBAT EMULATOR, packed with exciting features, is by far the fastest, most realistic flight simulator available. For the first time on a home computer, feel what it is **really** like to fly a high performance military jet and engage tanks, missiles, ships, helicopter gun-ships and two types of cunning intelligent enemy aircraft.

Featuring over 300 sprite images, ACE has the smoothest, most detailed cockpit view of hills, trees and other ground objects ever achieved thanks to specially developed Dynamic Graphic Technique (DGT) allowing sensational high speed solid 3D graphics.

In combat, your head will spin as you struggle with the help of the advanced avionics which include a rear-view camera and radar, to stay alive long enough to do some damage to the enemy.

The unique two seat flying option (pilot, navigator/weapon man) and **Synchro Speech** which passes vital aircraft condition information to the flight crew without freezing the action combined with dynamic tactical map, take offs and landings, summer, winter and night-time flying and a remarkably realistic in-flight refuelling option makes ACE the ultimate AIR COMBAT EMULATOR.

ACE SCENARIO

A vast invasion fleet has landed on your southern shores and discharged scores of tanks supported by helicopter gun-ships and protected by mobile surface to air missiles. Squadrons of enemy fighters give the enemy forces air cover. Advancing ruthlessly they are conquering your homeland, facing no opposition.

You are the last fighter pilot with only three A.C.E. Mark 21 multi role All Weather All Terrain **AWT** combat aircraft. Based at an allied airbase, your task is to attack and destroy the numerically superior enemy land and air forces and drive them from your shores. The final stage of the conflict, having already destroyed the enemy land forces and shot down their air force, is to sink the enemy fleet as it evacuates its defeated army.

ACE - EXPERIENCE IT NOW

Every computer game fan will love ACE - just look at these features:-

- 100% optimized machine code uses all available memory.
- Featuring Dynamic Graphic Techniques (DGT).
- The smoothest, fastest and most detailed cockpit view of any flight simulation.
- Views of hills, trees, tanks and other ground objects. Aerial combat, ground attack and naval attack.
- **Synchro Speech** i.e. the speech does not freeze the action.
- Two seat option - fly and fight with the aid of a friend.
- Sensational 3D solid (not boring wireframed) graphics.
- High score saving system.
- **AWT** operation (All Weather All Terrain).

* Note due to memory limitations ACE on the C16 and VIC20 (+8K Ram) do not have any ground objects.

The Ocean

Transformers, Streethawk, Knightrider, Rambo and V — names that might make up an evening's TV/Video viewing. But as any Transformers fan will know, nothing is what it seems — thanks to Ocean all these action-packed names are turning into computer games. Along with the licenced Konami arcade games scheduled for release on Ocean's Imagine label, this adds up to a veritable tsunami of software from the three-year old company.

Does a licensed computer game necessarily make a killing? Group Chairman David Ward emphasises that it's the creative process of making software that's important. "Licensing just helps us to position the product. It's all to do with being part of contemporary society."

The Imagine label, now owned by Ocean, is at the moment releasing home computer versions of Konami arcade games — a different form of licensing from using TV or film-related ideas. "There are only about 20 original games in the whole life of the industry — rather than just plagiarise, we prefer licensing other people's ideas." Ocean plans to move beyond the arcade. The new Ocean IQ label plans to release Laser Basic and Laser Compiler for Spectrum, CBM-64 and Amstrad, along with music software, a screen designer and a Pascal.

Heavy stuff, agrees David Ward: "The IQ label is to do applications packages for the same machines that Ocean markets for. We've got to grow up with our customers at the same time as getting new ones. A different label is necessary because people are used to arcade games from Ocean. You

Cosmic War Toad.

don't expect to open a tin of Heinz beans and find condensed milk in it."

Licensing is a tricky business. Transformers — the robot toys which turn into trucks or aircraft — were an obvious chase due to the massive success of both toys and TV series around last Christmas. But at the time Ocean acquired the rights to Sylvester Stallone's Rambo movie, they didn't face much competition.

"It was before Reagan's remark about knowing what to do next time he faced a hostage situation. That made it something else", says Ocean managing director Jon Woods. "Also, in my view, there's something of a depressed market in the States. New machine formats are coming along, so not much is being developed for the Commodore 64. Rambo was a surprise success, with not much prior licensing, unlike say Goonies which attracted a lot of attention because it had Spielberg's name on it."

A silicon Rambo

The silicon Rambo is a real epic with the combined talents of Daley Thompson's Decathlon and Hunchback II programmers Tony Pomfret and Dave "I'm starting to forget all the games I've written" Collier, plus Martin Galway on music and Steve "I used to be just an ordinary person" Wahid on graphics.

Although Martin Galway has added in self-composed passages of music the original pounding bass and swooping synthesiser sounds remain and music even plays while loading. "It's not loading the whole time — there are 50 times a second when it can play music." The morse code in the loading tune is actually tapping out a real secret message, so have your note pads at the ready and you may learn something to your advantage.

Although Martin has a number of instruments at Ocean HQ in Manchester, an upright piano and a Seiko DS-320 synthesiser, his preferred machine is the Yamaha CX-5. He has also worked on the sound effects, everything from approaching helicopters to the various mortars and machine guns the deadly dogface has

Top: Rambo. Centre: Comic Bakery. Above: Yie Ar Kung-Fu.

festooned around his person. Remarks that the game itself resembles Alligata's Whos Dares Wins — subject to legal action from Elite (they claim it infringes their license to the arcade game Commando) — are quickly rebuffed.

"In those games you can only move upwards, and you only have a gun and hand grenade. In this you have all the weapons that Rambo has in the film." Certain sections of the game have to be completed silently. Once the first prisoner is rescued from his crucifix in the stockade

you can forget about the knife and the arrows and really let rip. But you've got to collect the additional weapons from around the screen, acquiring them in the same way as the morose militarist arms himself in the movie.

You can blast your way through the jungle, but a river blocks your escape. Naturally you steal a helicopter and fly back to the compound to rescue the other inmates a la Choplifter.

wave

Paul Bond is all at sea with Ocean.

Chances are that a giant helicopter will give chase as you fly back up the screen, so it's non-stop action all the way.

When two tribes go to war there are plenty of points to be scored as Denton Designs who programmed Frankie Goes To Hollywood for Ocean well know. This Christmas it will be the two tribes of Transformers — Autobots v Decepticons — who will be fighting it out on computer screens worldwide, thanks to Denton's Tony Sanders and Ally Noble (graphics).

Collect energy pods

The goal of the game which features music from the TV show is to collect all the components parts of the Transformers' mask emblem. If the Decepticons collect the 15 pieces before you do, you lose. As one of the five Autobots, Optimus Prime (turns into a truck), Hand (turns into a jeep), Mirage (turns into a racing car), Bumblebee (turns into a VW Beetle) and Jazz (turns into a Porsche) you move around the ramps and levels on the screen, hounded by the flying Decepticons. As a vehicle you move faster across the ground, but as a robot you can fly and fire.

As you move about you must also collect energy pods, and you can use defenza-pods to switch control from one robot to another without destroying it. The five robots in existence appear icon-style at the base of the screen. "At first we were going to have a different screen for each Transformer. Then we changed it to one large scrolling map" says Tony Sanders.

It's not all licensed games that Denton are doing for Ocean as Ally Noble is quick to point out — a new game under the working title Cosmic War Toads is "sort of a Denton in-joke", she says. "We used to make up these silly ideas for a game with toads in, then we thought it might be a good idea to actually make it into a program." So you might expect the action to take place in blackest outer space, and you might be ready for one of the mini-environments to be a lily-pond — but a plate of frogs' legs in a French restaurant? Or beef sausages cooked in batter (toad-in-the-hole, geddit?)

You score Toad points by finding and killing Regellian slime-beasts — the slime master and his slime pawns. You can also delay their progress and the use of pond stones. Along with War Duck — the webbed warrior — and Porkula the cosmic vamp you are embroiled in the struggle to make the world a safer place to spawn.

Konami is a name popular amongst people who like pushing coins in slots — now courtesy of Ocean's Imagine label, you can save the wear on your wallet. Yie ar Kung Fu on Spectrum, CBM-64 and Amstrad is a colourful addition to the growing mass of martial arts simulations; along with Comic Bakery, basically a good solid platform game, and Mikie, initially on the Spectrum all these arcade hits will be available at Christmas.

Mikie is set in an American high-school — "Failure teaches success" — declaims a motto on one of the blackboards. He has to put together parts of a message whilst winning the hearts of the young co-eds; at the same time he is harassed by teachers, janitors and the muscle-bound football team. Colin Gresty and the inscrutable Joff are two of the Ocean programmers involved in the Konami work. Joff uses a Tatung Einstein to develop the Z-80-based versions of the programs. "The assembler is really brilliant, a pleasure to use."

Ocean have managed to tie up licenses for both the modern-day knights in shining armour currently tearing across TV screens around the globe — Streethawk and Knightrider. The initial game plan includes facility for synthesised speech and possibility of up to four different scenarios. The baddy in this program is SKARR, a vehicle duplicating Michael Knight's robot supercar KITT.

Built by a hostile foreign power, the vehicle is a real argument for state-subsidised free public transport, since it wants to do things like murder the El Salvadorian president whilst giving a talk in Los Angeles, nuke the New York World Trade Centre, kill the US President, and sabotage a shuttle carrying an SDI Star Wars satellite. Apart

from discouraging such boisterousness, Mr Knight and KITT have to find the smuggled Russian (oops, there I said it!) gold which is financing the operation. There will be a number of variables in the game, so it will be different each time it is played.

In Streethawk the hero and his computerised motorbike have the job of defending a female VIP from a gang of kidnappers.

The V sign to aliens

Computer games, like theatrical productions, can mutate considerably before their first night, so some ideas may be dropped and others added. At the moment the game plan for Ocean's program based on the space reptile soap opera "V" gives you the chance to totally annihilate the aliens' mothership and save humanity from becoming an interesting little item on the galactic menu.

The top two-thirds of the screen will show a scrolling network of air-vents and corridors deep within the heart of the Visitors' Mother Ship. Some of these corridors will lead into large open spaces, whilst others will lead into laboratories and storage rooms. Air-locks will lead onto the outer surface of the Mother Ship. Occasionally the player will find doorways leading to "Horizontal Lifts", or transporters.

The bottom third of the screen is used for hand-held communicator/computer and associated status information. Alternatively, the screen will show a number of icon-driven options which the player can take.

The Mother Ship itself is layed out in six vertical planes as indicated by figure 1. Each plane is built from 128 different screens. Each screen will utilise eight building blocks of 8 x 6 characters.

The actual "map" of each plane will be randomly generated

Left: Steve Blower, art director of Ocean. Above: David Ward.

at the beginning of each game so there will be plenty of variety.

You, of course, are Donovan the rebel leader and only man on earth who can act with his hairline. You guide him around the mother ship armed with a gun which can kill the visitors but not the robots. The communicator/computer section of the screen has a map of the level you are currently on and can be used to confuse the aliens' central computer.

If they pump gas into your sector you'll have to grab some oxygen cylinders. And if he leaves the ship, Donovan better be wearing a helmet. Certain tasks must be performed outside the ship — mainly destroying the main water inlet or destroying the main communications centre. Other tasks to complete may include destruction of various electrical generators, disabling the air purification plant and sabotaging the central computer.

Veterans of the Starship Paratroopers will be pleased to know that the Visitor's robots are divided up into sensor robots (which can see Donovan in the dark), cleaner robots which float at head height firing lasers, security robots which bob up and down and zap, together with maintenance robots. But they are useful to Donovan, insofar as he can trick them into opening doors that he can't.

The game promises to be well within the Ocean tradition of not only integrating real elements of the licensed original, but also creating a gripping and innovative computer game. Will this policy lead to their gobbling up their rivals like Diana polishing off a hamster? We shall see.

The Commodore 128. When you look at the facts they do seem to weigh rather heavily in our favour.

When you add it up, the Commodore 128 is really three computers in one.
It can run 64K, 128K and CP/M software. Giving it the largest range of computer software in the world. Making it as efficient in business as it is entertaining at home.
That's why Commodore has become the world leader in microcomputers.
And why, on balance, the Commodore 128 has no equal.

commodore

TERRORMOLINOS

► CBM 64/Spectrum/BBC/Electron/Amstrad • Melbourne House

Our man with the brass lamp and the key to a thousand mysteries sheds light on new adventure programs. Lost? Never fear, Hugo North is here.

From the authors of Hampstead comes yet another original and hugely entertaining adventure. Let me warn you now that if you're intending to go to Spain for your holiday next year, this game is likely to make you want to change your plans.

Your objective is not to slay wicked sorcerers, duff up dragons or track down the 200 lost treasures of Trantos. No, no, those are a piece of paella compared with this game. What you are faced with here is one of the most perilous assignments known to English mankind — survive a two-week package holiday with the wife and kids in sunny Terrormolinos. And you must bring back 10 snapshots to prove it.

Before you can even set

off for the Hotel Excrucio in Terrormolinos, you must first pack, naturally. Just as in real life, things you want are never where they should be and something always goes wrong at the last minute. The taxi's waiting outside but where the heck has little Doreen got to? Where did you put that camera? And what's that white gunge seeping out of the suitcase you've just packed.

One feature that makes this text adventure even more of a giggle is that every time disaster strikes, a colour snapshot of your misfortune is displayed on screen in glorious Saucivision.

A real hoot of a game, and novel with it. If you like a good guffaw, Terrormolinos will tickle your fancy.

SWISS FAMILY ROBINSON

► Commodore 64 • Windham Classics

THE CRYSTAL BALL

H.A.L.A. (Hints Archive for Lost Adventurers) is a new postal reference service for adventure devotees. And it's free. All they ask in return is a S.A.E. and any maps, clues, etc. for any adventure that you have already completed so that they can keep on expanding their adventure archives.

The service sounds fast and comprehensive. If you're interested, why not write to Sonia Griffiths-Glover (Keeper of the Archive) at 38 Bellfield Drive, Well Lane, Willerby, East Yorkshire HU10 6HQ.

This one impressed me right from its opening animated sequence of windtossed ship and accompanying thunder and lightning.

The top two-thirds of the screen are used mainly for simple but effective graphical representations of each location and any objects lying around. The lower portion is used for text input and output.

The game is very user-friendly and has many innovative features. For example, it will complete in full any abbreviated commands you enter, will highlight the command only if it is relevant to the current situation and will offer help, including a list of appropriate commands and their use, when you ask for it.

You begin on board the wrecked ship. Your first task is to search for and collect suitable supplies and then to find a safe way off the ship and to the nearby tropical island for you and the rest of the family.

Your ultimate aim is to survive and be rescued from the tropical isle. Even though you should be familiar with the plot of this classic tale, you'll still need all your creative wits to survive and

reach a successful conclusion.

This is a big (over 220 locations) adventure, thoughtfully designed, with lots to do and plenty of stimulating challenges to grapple with. Highly recommended.

Make it live

Last month we saw how "tree structures" can sort different conditions. If you missed that instalment, don't worry, because you'll find it quite easy to pick up the thread this month when we show you how to adapt these programming techniques for your own use.

Just to recap, we designed a tree like that shown in figure 1 to sort a number of conditions relating to a prisoner in a dungeon. If you examine the tree, you should be able to follow the logic of it, which in pseudo-Basic might be expressed as a series of If statements, like this:

```
IF (the player in the dungeon)
AND (there are rats present)
AND (the rats are hungry)
THEN PRINT "AAAAAGH!"
IF (the player is in the
dungeon) AND (there are rats
present
AND (the rats aren't hungry)
THEN PRINT "LUCKY YOU!"
IF (the player is in the
dungeon) AND (there are no
rats present)...
```

and so on. As you can see, we need quite a few If statements to sort all the connections, and a tree structure enables us to do this more economically.

We also discussed the different types of nodes which go to make up the tree, and dealt with two basic types: terminal nodes — which have no branches leading from them; and choice nodes — which test a condition and then branch accordingly.

If you look at figure 1, you can see the various nodes labelled with either a C or a T depending on their type. If we store in an array the information about each node — its type, and, 'if it's a choice node, the condition it tests plus to nodes it jumps to we can then write a simple routine which will start at node 1 and run down through the tree. We'll see this in action in a moment.

A simple affair

The tree in figure 1, however, is a very simple affair. We want to be able to design a tree that will enable us to handle interactive character in an adventure game, or any other task we care to tackle, and for these sort of applications something rather more complex is required.

If you look at figure 2, you'll see another tree again designed,

to test conditions relating to our imaginary prisoner, but this time there are a number of differences.

First, you will notice not one, but three different types of terminal node. For example, node number 16 is just a dead-end. If the program sorting the tree were to arrive here, it would simply exit without taking any action.

Node 3, however, would result in the printing of a message on exit, and node 15 would result not only in the printing of a message, but also the carrying out of certain actions, perhaps clearing the screen, or adjusting some variables relating to the prisoner's status.

We can call these three types of terminal node a "simple" terminal node, a "message" terminal node, and an "action" terminal node. Not only are there different types of terminal node, but there are also different types of choice node.

Node number 2, needs to test a condition that in this example hasn't yet been set up, so it first needs to jump to a routine that asks the player for the necessary information. In other words,

before proceeding it has to jump out of the tree, ask a question, and then proceed accordingly. This is called a 'procedure' node.

Node number 14, on the other hand, is a simple choice node — the condition it tests has already been set up during the program and stored in a variable — in this case by the procedure node number 1 — so it simply checks it and carries on accordingly to the value, true or false, that it finds there.

Sometimes, however, we might want to jump to one of more than just two different nodes. Supposing that in our adventure game there are three guards wandering around the dungeon,

me your command.

Left: Souls of Darkon — This is a typical latter-day adventure running on the Amstrad that makes limited use of other characters. The player is accompanied by Komputa, a loyal robotic friend. Unfortunately, like so many games, the character doesn't really play much of a role, and interaction with it is virtually non-existent. Above: Subunk is one of a vast number of games that have been produced using the Quill. Unfortunately there is no provision on the Quill for introducing true interactive characters though they can be simulated. Below: Ashkeron! — This

game uses an interrupt routine, similar to that used in the Hobbit, which enables events to take place in real-time. To some extent this has been used to implement "independent" characters who move about the locations and may either capture or try to kill you. Interaction with them, at least as far as speech is concerned, is however very limited.

but they are not always all there at the same time — we might want to jump to one of three different routines according to how many guards are present. Node 9 does just this, and we can call this type of choice node a "multiple choice" node.

Numbered sequentially

Note that the three nodes it jumps to are numbered sequentially — this is because at runtime the program will test for the number of guards and calculate the node to jump to by adding that number to the lowest-node-number-to-branch-to minus one. So one guard will cause a jump to node 13 (12+1), two guards to node 14, and so on. In this particular instance there can only be a maximum of three guards.

Finally there's a random choice node number 7 which is similar to a multiple-choice node, but rather than test a condition it simply generates a

ONLY THE BRAVEST FLY.... TOMAHAWK™

New, from the author of Fighter Pilot... a stunningly realistic helicopter simulation that puts you in command of an Apache Advanced Attack helicopter. You will learn to take off, to land, to manoeuvre and locate and destroy enemy tanks using Hellfire anti-tank missiles. You will experience authentic battlefield conditions as you endeavour to carry out your mission and return safely to base.

BY D.K. MARSHALL

48K SPECTRUM

Digital Integration would like to thank
McDonnell Douglas for all their help and technical support.

£9.95

Make it live

(continued from page 53)

random number within a particular range of integers, in this case 1 to 3. It then, adds that number to the lowest node number, here 10, minus one to determine which node to jump to next.

As you can see, there are now seven different types of node to deal with — you can see which ones are which in figure 2 as they've been labelled according to the key in the diagram. We're now going to program this tree in Basic to show you exactly how it's done — and it really couldn't be easier. Take a look at the program listing and then read through the following notes.

First we initialise three different arrays to hold data for our tree, for the conditions that will be initialised by nodes one and eight, and for the different messages that will be printed. This is done in lines 50 to 70.

Data for the tree

Next, we enter the data for our tree. The table shows the different items that need to be recorded for each node, and figure 2 shows, alongside each node, the data that needs to be entered for it. Node number 5, for example, has the figures 7,4,0,5 beside it, and if you refer to the table you can see that this means that:

- 1) This node is a "procedure node", type 7
- 2) It calls procedure number 4
- 3) It will result in the printing of message number 5.

This data is read into the array t(17,4) in line 90.

Having set up the tree array and the message array, we now proceed directly to traversing the tree. The code number is held in the variable n, and since we want to start at node 1, this is set accordingly in line 170.

Line 180 then checks the first data item for that node (t(n,1) to find out what type of node it is — terminal, message, or whatever. The program then jumps to the correct routine. A choice node, for example, checks the value of the relevant condition in the c array which will be pointed to by t(n,2).

The program is heavily Remmed in this section to help you see what's going on, so I shan't waste space by repeating what's already there. Note, by the way, that you can delete the Rem lines if you really want to — there are no jumps to Rem lines in the program.

By checking each node in turn, the program traverses the tree, printing messages, getting inputs, and jumping to the appropriate nodes until it reaches a terminal node. If you want to see exactly what's going on, amend line 180 to read:

```
180 PRINT "I am now at
node";n; ON t(n,1) GOTO
220,320,370,450,510,600,670.
```

and you'll see the program actually moving down through

the tree node by node. You can also make this amendment for debugging purposes if the program doesn't seem to be doing what you want it to.

There are a couple of other points to note about this listing. All actions and procedures called by the program are vectored via jumpblocks in lines 760 and 840. The reason for this is that when we come to design some really complex trees in the next issue for our character handler, this is the program structure we shall adopt.

The second thing to note is the way the program is carefully divided into sections. With a small tree such as the one we are dealing with here, this may seem to make the program unnecessarily long, but again, when we come to develop more complex routines, we shall be splitting up the program in a similar way.

Next month, we shall present a

complete example of the use of this method in producing a fully-fledged character handler.

A certain degree of efficiency has been sacrificed in this listing to make it compatible with a large range of micros. However, some changes will still need to be made by owners of BBC, Spectrum, and Commodore computers. These are listed here:

Chess

John Dawson checks out chess.

There's a false mythology about chess; you don't have to be a genius to play well and enjoy hours of concentrated excitement. Indeed, genius in one field is no indicator of brilliance in another. Alan Turing, probably the most brilliant mathematician involved in breaking the German ENIGMA cipher during the Second World War, is said to have been "an absolute duffer" at playing chess.

However, with the development of microcomputer chess programs and portable sensory chess sets, you don't even need a human opponent. This has the great advantage that when you are losing you can simply switch off the thing that's wiping the floor with you.

The programs and chess computers in table 1 actually play chess, generally according to the rules, and generally they are capable of beating you, unless you are a regular player with some experience. Some of the programs will offer you a good game at quite a high level of competence.

The **Chess King Pocket Micro** set is the only one of the four dedicated machines that does not have a "sensory" board. Instead, moves are keyed into the computer using the six keys at the bottom of the computer panel.

These keys shift automatically between the letter and the number depending upon whether you are entering the first or second co-ordinate of a piece's position. The other four keys control the level at which the machine plays LV, make the machine play the next move MO, and clear an incorrect entry CE before it is entered into the program EN.

Clearly the Chess King's input/output is greatly sim-

Figure 1: The opening position of all the pieces.

plified compared to the multiplexed eight column by eight row input and 16 light emitting diodes — LEDs — output in the other three machines. This simplicity is reflected in the Chess King's single chip and simple printed circuit board.

The board folds in two and makes a neat package in a soft plastic case about 19.5 by 6.5 by 2.5 cms. Battery life is said to be about 400 hours and there is a recessed on/off switch on the side of the case. The pieces on the board are punched from a strip of magnetised plastic. There are no spare pawns or Queens which makes life unnecessarily difficult if you, or the machine, succeed in promoting or exchanging a pawn for a Queen or another piece in the course of the game.

The CGL GrandMaster program was written by White and Allcock Ltd but the manual for the Chess King does not state the origin of the machine code held in the chip. It is a

Figure 2: Part of the Chess King instruction manual.

limited program both by the standards of the other machines and the software for the BBC, QL and Amstrad computers.

The Chess King has only four levels of play and, while the number itself is comparatively unimportant, the highest — strongest — level allows the machine only eight to 24 seconds on average to formulate its next move.

Pawn promotion, when a pawn reaches the opponent's end of the board, is assumed to

be to a Queen while the rules permit the player to choose to promote the pawn to a Queen, Rook, Bishop or Knight. Switching the machine off erases the current game and the Chess King sets up a new game automatically when switched on.

Probably the most important failing in the Chess King is the inability to verify where all the

pieces on the board are placed in the computer's memory. Nothing is more frustrating than setting up a devious trap only to find that the machine couldn't care less because it thinks one piece is somewhere else entirely.

There is no way to take back a move nor to review the moves that have been made other than by writing them down as you go along. However, at £22.95 in North Oxfordshire it is the cheapest dedicated machine to be found and it is very portable.

The **NOVAG Micro II** also uses a single chip to hold the program and play the game. The chip is a traditional 40 pin integrated circuit and figures 4 and 5 show the printed circuit board with the output LEDs and the two plastic membranes that form the sensory board.

A move is made on a sensory board by pressing the piece into its socket until two LEDs light up to indicate the current row and column — rank and file in chess terminology — of the piece.

The piece is removed from its socket and pressed down into the new location until the computer beeps to indicate that the move has been accepted. The computer's move is indicated by lights in the same way, the position of the piece to be moved is indicated and when it has been depressed the destination co-ordinates light up.

The **NOVAG Micro II** is 7 by 5 by 1.5 ins. in size and shares several of its functions with the **SciSys Explorer** chess computer. The Explorer machine is 7.5 by

4.5 by 1.5 ins. and is the most sophisticated of the three dedicated computers. Figure 3 sets out the hardware configuration and software specification for the various machines and programs.

The **Micro II** failed to spot a potential 3 move draw when playing against the Explorer and then did not indicate that the draw had occurred while the Explorer lit up the appropriate LED to indicate a stalemate or

draw. I have taken none of the machines through the series of repetitions necessary to provoke a draw according to the 50 move rule but as all the machines are unable to take back more than four half moves at best — the Explorer can backstep through two White/Black moves at some stages of the game — it seems unlikely that any of the machines has the capacity to detect a sequence of 50 identical moves.

Indeed, the Explorer instructions say honestly: "In

Above — detail of Chess King.

Below — Chess King Pocket Micro. Left — SciSys Explorer.

the case of a stalemate or draw by immediate threefold repetition, only the Mate light will be turned on"; by implication excluding the possibility of a 50 move draw.

The **SciSys Explorer** has both the best program and the best design of the machines I have looked at. The Explorer predicts what your next move is likely to be and then thinks while it is waiting for you to move of

(continued on next page)

Chess check-out

(continued from previous page)

what's the best reply it can make. Neither the Micro II nor the Chess King do this and clearly it increases the power of the program considerably.

Colossus 4.0 and **QL-Chess** both think in their opponent's time and you can turn off this feature which makes the program weaker; that's to make you feel even smaller when you lose the 10th successive game. The compartment on the right hand side of the Explorer board holds the spare pieces safely, a good range of functions are given by the "function" keys, three AA cells provide more than 100 hours use and the machine will store the state of a game for up to one year when the power switch is turned to "memory".

The SciSys machine has a good set of standard opening moves — the "book" — which it plays quickly and decisively so long as your responses match its expectations. Unlike some early chess programs, the Explorer seems to have no trouble moving from its openings book to the middle game. Most chess computers are comparatively weak — by good players' standards — when the majority of pieces have been captured

and the war on the board enters the "endgame".

Martin Bryant wrote **White Knight Mk 11** and **Mk 12**, and is responsible also for the Commodore 64 program **Colossus Chess 4.0**. The instructions for the programs are very similar and clearly the architecture of the software is a progression from one program to the next.

There is an interesting series of comparisons in the back of the instructions for **Colossus Chess 4.0** between micro-computer chess programs for the Apple II, Spectrum, Atari, Dragon, Electron, Oric and ZX-81 computers. **Colossus 4.0**, running on an Apple II, beat everything in sight including both versions of **Colossus** is supplied with a number of demonstration games for tutorial purposes.

The **QL-Chess 3D** display is a lot of fun and, like Martin Bryant's programs, plays a good strong game of chess. However, the plan view provided in **Colossus 4.0** and the **White Knight** series is clear and gives unequivocal information about the state of the game.

CONCLUSIONS

The dedicated chess machines have some real advantages over either another human player or a program running on a microcomputer.

- You can learn by playing just some of the moves of a game over and over again. I have found it very instructive to see how the Explorer deals with the first 10 or a dozen moves. Very few human opponents will put up with so selfish an approach.

- The real pieces in the NOVAG and SciSys machines give a true perspective and allow you to 'walk round' the board in a way that even the best 3D programs cannot simulate yet.

- You can play chess on a train or bus, at the seaside, anywhere you like with one of the dedicated machines.

Conversely, the chess programs may suffer from being too strong for many beginners even at the lower levels of play. One form of handicapping that used to be popular was for the stronger player to give the other one or more pieces at the start of the game.

The machines and programs with a Set-up mode allow you to take away a Rook or some other piece from the computer before the game starts. **Colossus 4.0** also allows you to handicap the computer by cutting down the time available for it to compute its moves.

Either a dedicated chess computer or one of the programs could make a really long lasting Christmas present. But the machine and its instructions alone are not sufficient unless there is a good chess player in the same household.

The SciSys Explorer is the best of the sensory chess computers that I have seen. It's available from Dixons or, in a different colour scheme, from Tandy.

PUT YOUR MICRO ON THE PHONE

The new GEC Datachat 1223 modem gets you and your micro into the data communications age in the simplest and safest way possible. With its novel feature of being powered from the telephone line, Datachat requires no mains supply or batteries.

Datachat gives you access to a huge amount of information held on data bases such as Prestel and Micronet 800 and lets you communicate through electronic mail systems like Telecom Gold.

Datachat offers both 1200/75 and 75/1200bit/s operation to CCITT V23 standard. Using this high-speed turn-round capability means that you can chat and swap programs with other micro users at 1200bit/s.

And if you have a BBC Micro then GEC can supply advanced communications software on disc or ROM. The software includes an exciting user-to-user communication capability that is menu driven and really user friendly. Operation of the modem is also possible with many other communications software packages, microcomputers and terminals.

One of a range of professional modems designed and manufactured in the United Kingdom by GEC Telecommunications Limited, Datachat is fully approved by the British Approvals Board for Telecommunications (BABT) and is ideal for business, educational and home users.

Datachat can be obtained from selected dealers or direct from:

Modem Division Sales Telephone: 0203 446331

Sampling

H N-n-n-nineteen eighty five has been the year of the sampler. Now you can imitate the effects as Tony Sacks reports.

Have you ever wanted to conduct the Berlin Philharmonic Orchestra? Or to have Mark Knopfler play for you in your living room? Well, these and a thousand other fantasies can now come true through the miracle of sampling.

All you need is a micro, a box of electronics and matching software, and you too could be producing some of the dramatic effects that pepper the works of Duran Duran, the Thompson Twins, Paul Hardcastle, and many other contemporary

segments — and hence the size of the segments. This rate is known as the sampling frequency. As a rule of thumb, the sampling frequency should be twice the highest frequency you want to hear, so that to hear a frequency of 15kHz — towards the top of the audible range — you would need to sample at 30kHz or higher.

So far, so good. But the higher the sampling frequency, the quicker your micro's limited memory is gobbled up, and the shorter the sample will last. For example, Supersoft's Microvox sampler for the Commodore 64

will give you less than a second of sampling time at its maximum sampling frequency of 42kHz.

This may be sufficient for short percussive sounds but when you want to sample a sound like a piano which may take several seconds to die away, you've got problems.

There are two possible solutions. First you can reduce the sampling frequency which means that you will lose some of the higher frequencies in the sampled sound. This may or may not be noticeable, depending on the sound, but it will give you a longer sample. The

Microvox, for example, provides a maximum sample length of 17.4 seconds at a frequency of 2kHz.

The second approach is to sample at a high frequency but to use some nifty software to doctor the playback. If, immediately after reading the sampled sound out of memory, all or part of the sample is re-read, you can give the impression of an extended sound. This trick, called looping, can be repeated to give a continuous sound. Some samplers will even decrease the amplitude of the output gradually to give the impression of a sound dying away

You may not be aware of it, but many of the percussive sounds on recent rock records are the work, not of sweating musicians but of electronic "drum boxes" pumping out sampled sounds.

Percussive sounds are ideal for sampling because they tend (with some notable exceptions) to be rather short-lived and to have limited bandwidths. Individual sounds can thus be squeezed into relatively small chunks of memory and several different sounds can co-exist in a micro's memory.

It is not surprising therefore that among the first batch of sampling products for micros are two drum

simulators. What is more surprising is that whereas dedicated drum machines cost several hundred pounds each, the two micro-based packages, for the Commodore 64 and the Spectrum, cost just £65.00 and £29.95 respectively, and yet produce stunningly realistic and powerful sounds.

As with the other sampling systems described on these pages, the sounds produced by these drum simulators are digital recordings of real sounds. Their quality bears no relation to the types of sounds you are used to from your micro's internal sound system. They have to be heard to be believed.

But unlike the other sampling systems, these packages do not allow users to produce their own samples. Instead the suppliers provide ready-sampled sounds on disc or cassette together with the software to combine these sounds rhythmically, and a relatively simple digital-to-analogue hardware decoder.

The Commodore drum machine, called the Syntron Digidrum, was developed in the Netherlands and is being distributed in Britain by Syndromic Music. The Spectrum package, dubbed the Specdrum, is a home-grown product from Cheetah Marketing and is being sold only by Boots. An Amstrad

version, expected to sell for around £35.

Although the two drum simulators are not strictly rivals — unless you don't own either a Spectrum or a Commodore — it is interesting to compare the approaches adopted by the two design teams.

In many ways the two systems are very alike. Both squeeze eight different percussive sounds into the sampling memory. Both allow up to three of these sounds to be played back simultaneously but restrict the choice to one sound from each of three groups. Both provide a grid display for the user to construct rhythm patterns, and both allow

musicians.

The theory of sampling is simple. You take a sound — either from a microphone or directly from your hi-fi or an electronic instrument — and chop it into lots of tiny segments, each usually lasting less than one-thousandth of a second. These segments are then digitised and tucked away in the recesses of your micro's memory.

When you want to play back the sound you squeeze the digitised data back through a digital-to-analogue converter to reconstitute the sound and send the signal to an amplifier. All being equal, you should get a recognisable rendition of your original sound blasting out of the loudspeaker.

If the hardware is well designed, the quality of a sampled sound is determined largely by the rate at which the original sound was chopped into

*Above right: Muzix-81, Microvox, SFX and DMS.
Below: SFX in greater detail*

samplers

naturally.

Looping is just one of many ways in which the sampled sound can be manipulated once it is in a micro's memory. The most obvious of these is to change the read-out frequency. If you read out the data at twice the sampling frequency you will get the same sound an octave higher — and lasting half as long. Similarly, halving the read-out frequency will drop the sound by an octave. Intermediate frequencies produce intermediate notes.

Most samplers allow you to select limited portions of the sampled sound for playback or manipulation. Using this facility, you can pick out the

butch — or, if you prefer, give yourself a falsetto. It is even possible to perform a duet with yourself.

The £249.95 ZX-81 sampler, called **Muzix-81**, was developed

segments of sound during a looping operation to make the joins almost inconspicuous.

Where the Muzix-81 does fall down is in the diabolical keyboard and limited graphics capabilities of the ZX-81. The

analogue control system in which an increase in one volt would produce a one octave rise in pitch. The Muzix-81 is designed to be driven by such a synthesiser which you could probably pick up fairly cheaply on the second-hand market, but

series of these patterns to be linked together to form "songs".

However, there are distinct differences between the two systems. The Digidrum has been designed to maximise the amount of memory available for sample storage, sometimes at the expense of user-friendliness.

The Spectrum designers have devoted a greater proportion of the micro's memory to the control program, with the result that it is easier to use and slightly more versatile than the Digidrum. The price they pay is slightly inferior, but still perfectly acceptable, drum sounds.

One particular attraction

of the Spectrum not available on the Digidrum, is the option of real-time programming. Both systems allow you to enter drum patterns, in your own time, as points on a time-v-instrument grid, but, at present, only the Spectrum allows you to tape out the rhythms on the computer keyboard and have these entered automatically on the grid. For many people, this more intuitive approach is preferable. The Digidrum designers are said to be working on a real-time version of their system.

There are differences too on the hardware front. The Digidrum has a socket which pumps out timing pulses for external devices such as

synthesizers and dedicated drum machines suitably equipped to follow its timing instructions.

The Spectrum prefers to take its orders from the outside world and will synchronise its activities with signals fed through the EAR socket of the Spectrum. This allows it to stay in time with instruments recorded on different tracks of a multi-track tape recorder, for example.

Sampling systems such as the Spectrum and Digidrum are only as good as the sampled sounds supplied for them. Both systems come with a useful assortment of sounds — the Spectrum having a basic "kit" of eight

and two alternative sounds; the Digidrum having two full kits, one conventional, the other made up of tinkly, butt effective, glass sounds.

Both also include a variety of rhythm patterns and "songs", which serve the dual roles of demonstration pieces and instructive examples of the programming art.

Sooner or later you will probably tire of the original set of sounds, so both suppliers are wisely planning to support their systems with further sampled sounds on disc and/or cassette. The first back-up set of more than 40 new sounds for the Digidrum is already available at a cost of £16.50.

solo flute sound in the middle of a sampled orchestral flourish, for example. It also means that part of a sample can be repeated several times to give Paul Hardcastle's stuttering "n-n-n-nineteen" effect.

Some samplers provide real-time effects to produce doctored versions of the original sound almost instantaneously. For example, by playing back a sound just after it has been fed into the sampler, a variety of effects such as echoes and reverberation can be generated, depending on the length of the delay.

Another popular real-time effect is to shift the pitch of the playback sound. If you treat your voice in this way, you can make yourself sound incredibly

by a pair of Hungarian musician-boffins and is being distributed in the UK by Vulcan Electronics. It turns out that the ZX-81's relatively simple internal architecture lends itself to sampling although its memory has to be boosted by the addition of a 64K Rampack. This gives it a 1.6 second maximum sample length at a very respectable 37kHz sampling frequency.

The quality of the sounds produced, and the facilities offered by the Muzix-81 rival those of the best of the Commodore-based systems. Indeed it has one very useful command not offered on the CBM samplers. This automatically looks for matching

graphics limitations are especially apparent when the Muzix-81 tries to produce an oscilloscope-type display of the sampled sound.

These displays, common to all of the sampling packages, help the user to visualise the sound and to select looping points. Not surprisingly, the Commodore-based samplers do a much better job than the ZX-81. These relatively minor problems should be overcome in a Spectrum version of the Muzix-81, due soon.

Another possible drawback to the Muzix-81 is that it has to be controlled by an analogue synthesiser. Before the digital age dawned with synthesisers commonly used as all recent

electronic musical equipment is geared to MIDI, this seems a retrograde step.

One sampler which does allow for control from a MIDI keyboard is Supersoft's £225 **Microvox** package for the Commodore 64. This is a well thought-out sampler with a wealth of facilities — as its price would indicate.

In addition to versatile and easy-to-use sample-taking and manipulating controls, the Microvox includes a real-time delay effects section and a "sequencer". This allows you to record, and subsequently edit, a series of single notes played on a MIDI keyboard in real time. These notes can be

(continued on next page)

Sampling samplers

(continued from previous page)

stored as up to 24 different "pattern" which can be linked together to form a "song".

The sampler allows you to store simultaneously up to 16 different sampled sounds, or "voices", provided that there is enough memory. The sequencer can be instructed to play different notes using different voices, thus adding to the richness and the variety of the output. It can, for example, be used to simulate a set of percussion instruments, and a "kit" of sampled drum sounds is provided as part of the Microvox software.

The Microvox's almost total reliance on MIDI for control is both a strength and a weakness. The main drawback is for would-be users who do not possess a MIDI keyboard and cannot afford the £500-plus cost of a keyboard and sampler.

For such people a slightly cheaper alternative exists in the form of the £199 **Digital Music System** — DMS — from Microsound. In addition to MIDI, this system also offers the options of controlling the sampler either from the Qwerty keyboard — possibly using a clip-on miniature musical keyboard such as those from Commodore or Siel — or from

the company's own £99 full-size, four-octave musical keyboard.

The DMS allows the user to select a sample rate of between 4kHz — which gives 8s of barely recognisable sound — and 33kHz — which produces 1s of high quality sound. It does not offer any real-time effects, but does include a modulation source which can be used to tinker with the sampled sound to produce interesting effects. It also provides an envelope function with variable attack, decay and sustain characteristics to shape the sampled sound.

The DMS and Microvox samplers are aimed, both in quality and price, at the serious musician. But a pair of Commodore-based samplers at a more accessible price for the less dedicated experimenter, should be on the market by the time you read this.

The first of these is from Commodore itself. It is a product of the company's collaboration with Music Sales which has resulted in sophisticated software for the SID chip and the £100 Sound Expander synthesizer add-on for the CBM-64/128.

The £69.99 **Commodore Sound Sampler** comes complete with a microphone and plugs into the cartridge port of the 64

or 128. A useful option not provided with other samplers is the possibility of playing back the sampled sounds through a television speaker; the other systems rely on you having an amplifier close to your micro. An optional £24.99 MIDI adaptor can be plugged into the Commodore sampler module to give MIDI control of the sampled sounds.

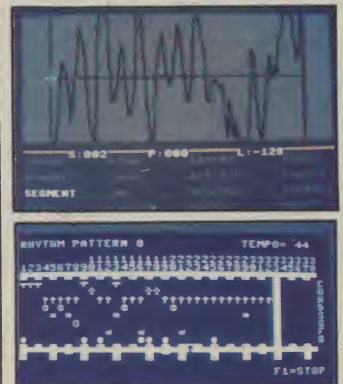

The Commodore software is based on easy-to-use pull-down menus. In addition to straight sampling, it offers two types of real-time effect: delays from 20 milliseconds to 2 seconds; and pitch transposition of up to an octave above or below the original sound.

Four different short sounds can be stored simultaneously and played back using a very rudimentary sequencer. As with Supersoft's Microvox, this facility is used to simulate a drum machine and two four-instrument sampled drum kits are provided as part of the software. Unfortunately, the Commodore's 16-note "sequencer" is such a basic affair that it is little more than a gimmick.

Although the Commodore sampler does offer very good value for money, it is clear that some corners have been cut to achieve this. For example, there is no choice of sampling frequency, the fixed rate being at 20kHz, providing samples up to 1.4 seconds long. The resulting sounds, although good, are not quite up to the standard of the sampler's more expensive rivals.

Even cheaper than Commodore's sampler is the £49.99 **Digital Sound Sampler** from Datel. Earlier this year Datel brought out a sampler for the Spectrum which was little more than a toy, producing sampled sounds of rather poor quality and offering a minimum of functions. The company claims that the Commodore version is a vast improvement, with better designed electronics and software written in machine code, not Basic as was used of the Spectrum version.

The Datel sampler, which was not yet available for review as we went to press, provides a variety of real-time effects and includes a step-time sequencer.

It is designed to be controlled from the Qwerty keyboard, possibly using a clip-on musical overlay.

The possibility of MIDI control was looked at but discarded on cost grounds. But as a spin-off, Datel plans to produce a separate MIDI interface which will be sold as a package with MIDI real-time and step-time recorders at the remarkable price of £39.95 — less than half the price of some existing CBM-64 MIDI interfaces!

In many respects, the DS:3 for the Apple II is like its less costly counterparts, but it does have one significant advantage. Whereas the other samplers we have looked at are all monophonic — only one sound can be played back at a time — the DS:3 is polyphonic, allowing up to four notes to sound simultaneously.

Interrupt-driven

Many popular video games nowadays have music ringing in the background during play. The Amstrad CPC-464 computer has some excellent facilities for sound generation but attempting to add background music to a Basic program using the Every instruction generally gives poor results with the game being slowed down considerably.

The assembly language program presented here allows interrupt driven background music to be added to Basic programs through the use of some simple RSX-Resident System extension-commands. It also allows the use of one, two or all three sound channels.

The following commands are provided. Note that each one

must be preceded by a vertical bar (Shift '@') symbol. A parameter enclosed in square brackets is optional.

(1). **MUSICON** ,t, a1 (,a2) (,a3) — turn on music. where t is the tempo (the length in fiftieths of a second, of the shortest available note) and a1,a2 and a3 are two less than the addresses of the data for channels 1,2 and 3 respectively.

(2). **MUSICOFF** — turn off music.

(3). **VOLUME** v,1 (,v2) (,v3) — set for channel (s), where v1, v2 and v3 are the respective amplitudes of channels 1,2 and 3.

(4). **PAUSE** — stop playing music.

(5). **CONTINUE** — continue playing music after pausing.

To enter the program, you

can either enter and assemble the source code — listing 1 — using an assembler. I have used Devpac but any good one should do). Or if you do not have an assembler I have provided a Basic loader program — listing 2 — which should be typed in and Run to store the code in memory.

Once the code is in memory, it can be saved on tape (or disc) using the command

SAVE "MUSIC",B,&A000,&2A0 (enter)

To make the computer recognise the new commands the instruction CALL &A1C5 should be given. At this point the program can be tested by entering and Running listing 3 which tells the computer to repeatedly play all the notes available until a Musicoff

command is given.

Any program using the extension commands should include the following line to load the code and log-on the commands MEMORY &9FFF: LOAD "MUSIC":CALL&A1C5

The data for the music to be played through a channel is arranged as follows:-

byte 1 — duration of note 1 (1-127), byte 2 (upper nybble) — note 1 octave (0-5), byte 2 (lower nybble) — note 1 number (0-11), byte 3 — duration of note 2, byte 4 (upper nybble) — note 2 octave, byte 4 (lower nybble) — note 2 number....., 0

Once the music playing routine discovers the 0 in place of a duration number it then loops back to the beginning again. If bit 7 of the duration number is

Listing 1.

music

set (just add 128), then the note is a rest otherwise 1 is the shortest note available, 2 is twice as long, 3 is three times as long etc. The octaves available correspond to octaves -2 to +3 shown in the CPC-464 manual appendix VII and in the firmware manual appendix VIII. e.g. bytes 2,52 define a note of duration 2, octave 3, note 4; 129, 0 define a rest of duration 1. A simple formula for working out the second byte of a note is therefore:

byte stored = $16 \times \text{octave} + \text{note}$

If you do not wish to type in the program I can supply copies of it on cassette for £4 each. Please include a 24 pence SAE. Write to: M.B.L. Dunlop, 19 Droridge, Dartington, Totnes, Devon, TQ9 6JG.

Sound Master, for the 48K ZX Spectrum, allows you to store sound or speech into the computer's memory and replay it afterwards. But it also allows you to reverse the sound, replay it at eight different speeds, and with varying echoes.

The program itself is not very large, about 4K of Basic and 2.5K of machine code, but the enormous chunk of memory used to store the speech — almost 32K for four seconds — caters for 48K users only. I will give a detailed explanation of the use of the program later. First let me tell you how to get the program in your computer in the first place.

Enter program 1, make sure everything is keyed in exactly as in the listing. Save it using SAVE "SM" LINE 1 and start the tape recorder. Press Enter. Enter program 2. When it runs perfectly Save the machine code using SAVE "code 1" CODE 65025,224 and verify it. This is very important. Repeat the process with program 3 and Save the machine code with SAVE "code 2" CODE 30000,1835. Start the tape recorder, press record and play together, and

then press enter.

Now rewind the tape to the start of the code and press VERIFY "" CODE

Clear the computer using RANDOMIZE USR 0

You should get a black screen, red lines and the Sinclair copyright message, as if you just switched the computer on. Spectrum Plus owners can do this by simply pressing the little switch on the left-hand side of the machine.

Enter the Basic listing — program 4 — starting with 1 CLEAR 29999: LET spd=7. Never attempt to Run it or to press Go To (line number) since a crash will always be the result and you would have to start all over again.

Check everything carefully, then SAVE "BASIC" LINE 1. and verify.

Clear the computer as described then rewind the tape and enter Load "", no spaces. Sound Master should now load normally

The first thing you see when the program has loaded is the blue menu screen. You're presented with 10 options, numbered 0-9. They are:

1. Record sound

This option allows you to enter sound via a tape recorder or microphone which is attached to the Ear socket of the Spectrum. After about four seconds, an OK message should appear on your screen and the program then returns to the menu. However, if this does not happen then you have entered a wrong hex code between addresses 65025-65052.

What this routine does is scan the Ear socket at a rate of 64,512 Hertz or, 64,512 times per second, for a noise. If it receives a noise, a click, it stores a 1 in its memory. If it doesn't, it stores a 0. These 1s and 0s are stored in memory in groups of eight, known as bytes. The analogue sound is digitised.

2. Replay sound

This option replays the sound you stored in the computer. It is, in fact, the reverse of option 1. It converts the 1s and 0s from memory to clicks and no-clicks.

This reproduces a sound which is quite recognisable. But because of the slow speed at which actions take place, and the Spectrum's limited speaker some ambiguity is unavoidable. Fantastic, clear sound is produced at a 17 mHertz rate, while ours is produced at 64 kHz. This is due to the speed of the Z-80 microprocessor found in the Spectrum. It is, in fact, quite a fast eight-bit processor, but for our purposes not fast enough to produce a sound that is free from disturbing noise. Using a Dolby cassette deck would help in filtering out these noises though.

If we wanted a clear, solid sound for four seconds, then we would need a computer with 256 times more memory than the

Spectrum, and which runs at least 256 times faster! Perhaps a Cray-1 will do. If you have any problems here, check your bytes between 65053 and 65085.

3. Change speed

The program allows you to replay the sound at eight different speeds. Speed 1 is superfast — you'll need megabytes to understand any of it — and speed eight is the slowest. Speed 7 is the one at which sound is always recorded.

4. Disappearing Echo

It is impossible to do any magic with the Spectrum's sound speaker's volume under software control. So I present you with a disappearing echo instead of a fading one. Echo-steps may be controlled by the user. Echoing is done at the current speed, set at option 3. This is initially 7.

5. Appearing echo

Which is, of course, the opposite of option 4.

4. Fastening echo

This produces an echo which starts at the current speed and repeats, faster and faster, until it reaches speed 1. If, for example, the current speed is 5, then the speeds at which the program echoes are 5, 4, 3, 2, 1. If the current speed is 8, the speeds are 8,7,6, etc. This option has no effect whatsoever on the current speed at which sound is replayed in option 2.

7. Slowing echo

The echo starts at the current speed and slows down until it reaches speed 8. Again, this command has no effect on the current sound speed.

Sampler

8. Load file

Use to Load a file previously saved using this program. You'll be asked for a filename but if you can't remember the name of the file you want to load, just press Enter. This command will only accept sound master-files.

9. Save file

When you have successfully sampled sound you may wish to Save it to tape. Enter the filename, start the tape recording and then press any key. Remember that 32,258 bytes have to be saved so saving might take

as long as 2.5 minutes.

10. Reverse sound

This handy routine reverses the sound stored in the micro. This means, effectively, that if you had a recording in your memory of you saying "computer" then the reversed version would say "retupmoc". Intonation is also reversed. This produces smashing effects.

Note that this option does not produce any sound, yet swaps bits and bytes around in the computer's memory. This means that every other option, except 1, now operates on reversed sound.

If you now Save your file and load it back later, you will notice

that the sound is still in its reversed form. To restore it to normal, just use option 0 again. Any troubles in reversing your sound? Check your bytes 65108-65150.

Trouble with the main menu screen has to do with wrong coding in locations 30000-300014. If you spot trouble, again check your hex codes.

For the technically-minded; speech is stored between addresses 32768 and 65024. Using the following routine, which I did not include in the main program, you can Invert the sound, that is, high sounds become low sounds and vice versa:

```
LD HL,32768      LD A,H
L1 LD A,(HL)      CP 254
CPL              JR NZ, L1
LD (HL), A        RET
INC HL
```

The program has been tested on Spectrum + and Spectrum issues 2 and 3. Program 1 includes the pokes necessary to adapt the program to run on Spectrum + and Spectrum issue 3.

If you would like a copy of Sound Master but find it rather tedious to key in the listings and machine code, simply send £2 to: Sound Master Offer, Roy Dictus, Apostelster, 8,2000 Antwerp, Belgium. You will receive a copy of the program in your postbox.

CHRISTMAS MICROFAIR

Looking forward to a high-tech Christmas?

Then come along to the CHRISTMAS MICROFAIR at the Horticultural Hall, London SW1 on the 14th December.

It's enough to make even Santa Claus's eyes light up.

Everything you ever wanted for the ZX Spectrum, Spectrum + and the QL under one roof, in one day of non-stop computer entertainment.

Software, hardware, books, add-ons, printers, monitors, user clubs, magazines, computers, and a fantastic range of gizmos that are not generally available in the shops.

There's all those 'just released' programs for the Spectrum and QL, and more than one opportunity of getting something at special "show" prices.

Send for reduced-price advance tickets now.

CHRISTMAS MICROFAIR

DECEMBER 14TH 1985, HORTICULTURAL HALL
GREYCOAT STREET / ELVERTON STREET LONDON SW1
10am - 6pm

ADMISSION: £1.75 (ADULTS); £1.25 (KIDS UNDER 14yrs)

SEND FOR REDUCED PRICE ADVANCE TICKETS TODAY

Send to Mike Johnston (Organiser), Dept YC ZX MICROFAIRS,
71 Park Lane, London N17 0HG.

Please send me _____ advance tickets
(Adult @ £1.25)

Please send me _____ advance tickets
(Child under 14 @ £1.00)

COMPETITION RULES

- The winners of the competition will be the people who, in the view of the editor, come up with the most interesting or amusing ideas for what their computers might be transformed into.
- The names of the winners will be printed in the February issue of *Your Computer*.
- All entries must arrive at the *Your Computer* offices by the last working day in December 1985.
- Each person may enter the competition only once.
- Entries to the competition cannot be acknowledged.
- No employees of Business Press International or their relatives may enter the competition.
- The decision of the editor is final.
- No correspondence on the result of the competition will be entered into.
- Business Press International assumes no responsibility or liability for any complaints arising from this competition.

WIN

16 Transformer Dinobots worth £20 each. We need to find homes for four Grimlocks, four Snails, four Sludges and four Slags. These Dinobots can be flipped from robots into prehistoric monsters to "defend Earth's primeval outer fringes from the Evil Deception." We're also giving away 50 Spectrum and 50 CBM-64 copies of Ocean's new Transformer game.

All you have to do is send us drawings or written descriptions of what you think your computer might be transformed into.

TRANSFORMERS

Don't forget to enclose this coupon, or a photocopy of it, when you send in your entry to Transformers Competition, *Your Computer*, Room L221, Quadrant House, The Quadrant, Sutton, Surrey SM2 5AS.

**Trying to play all the games you can get for the Sinclair
(About 5,000 times.)**

Sinclair Spectrum could kill you.

How would you like to be blasted out of the sky by anti-aircraft guns?

Or perhaps you'd prefer to be vapourised by a Thargoid starship.

Or eaten for breakfast by mutant rats.

Well, you have all this and more to look forward to, if you get a Sinclair Spectrum +.

Because there are more games available for the Spectrum+ than any other home computer.

(About 5,000 the last time we counted.)

Not all of which lead to such sticky ends, we might add.

You may, for instance, rather battle it out on the chess board with a Russian grand master. Or cross swords with Nick Faldo on the golf course.

You won't just have the pick of the current titles either.

You'll get first shot at the new ones too. Because most of them become available for the Spectrum+ before anything else.

And because there are so many other Spectrum owners there are more books and magazines and clubs to join.

So if you get a Spectrum+, you may well end up in a Grand Prix pile-up.

And your chances of being killed by Gremlins are very high.

But you'll never die of boredom.

sinclair

Hot Shots

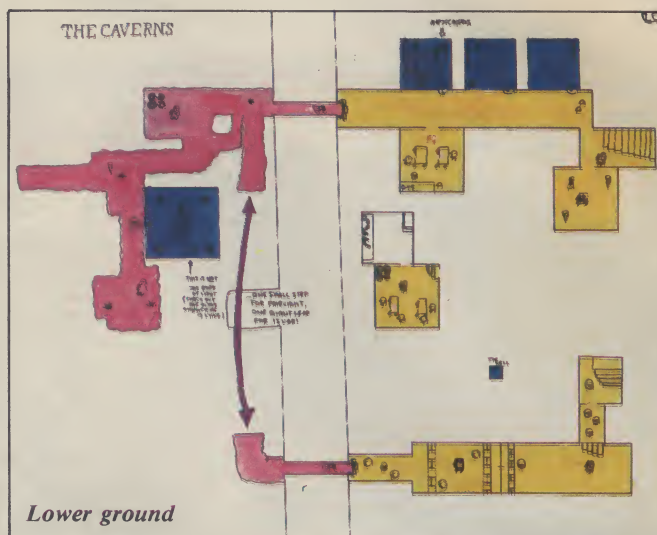

MAP OF FAIRLIGHT

by Mischa Welsh
and Stephen Hill

It's the dead of night — no one can hear you scream. No one, that is, except David Williams. Call him on 041-770 9599 after 9pm for help with your adventure problems.

Telsoft

The programs given here will enable Spectrum, BBC, and CBM-64 owners to download via *Your Computer's* Telsoft service. Each month for each machine we transmit least one — and usually two — of the main programs appearing in the current issue. Also available is the full user to user communica-

tions program Dialsoft.

So far OE LTD's Telemod 2 and the VTX 5000 modems have been tested with the BBC and Spectrum but the service also works with a number of other makes. For the CBM-64 it will initially only be available with the OEL Comms pack together with the Telemod 2 or similar modem; later we hope to

adapt the service to work with Commodore's modem.

Hexloader

To enter the download program first type in the hex-loader for your machine — figure 1 — and then enter the machine code — figure 2. Once the program has been saved you can run it by entering CALL

&6000 on the BBC, SYS 51000 on the CBM 64, RANDOMIZE USR 60000 on the Spectrum.

To find out what is available and how to receive software dial up Colchester (0206) 8068. This audio recorded information line will also advise you which telephone numbers to ring for the 300 and 1200 bits/ services.

When a program you want to

Figure 1. CBM-64.

A reminder of how to use the Telsoft service.

download is on line, make sure your modem is set up and dial the number appropriate to its speed. As soon as you hear the modem tones switch the modem to line and replace the receiver. Select Option 1 from the menu — Receive. After a block of data is received you will see "OK" printed if there are no errors, otherwise the program

will wait for the blocks to come round again. When the "Program loaded OK" message appears return to the Telsoft menu and select Option 5. You can now save and run.

Option 6 for CBM-64

Note that CBM-64 owners will need to use Option 6 if machine code is to be saved.

The single-handed STICK — unique mercury tilt switches — standard 9 pin D plug — made by John Hall, West Germany — £12.99.

REVIEWS...

Your Spectrum... "A snip at £12.99, so if you're a stickler for fast action games, get stuck in..."
Your Computer... "Very sensitive and less tiring to use than conventional joysticks..."
Compunet... "Excels in sports games..."
Commodore Computing... "A great help for the more complicated flight simulation games..."
MSX User... "Particularly good for the frantic sports simulations from Activision and Konami..."

Also full range of John Hall GmbH high quality cables/accessories.
At your LOCAL DEALER or direct from LIGHTWAVE.
Send s.a.e. for price list — state Amstrad, Commodore, Atari.

THE STICK £12.99 + £1.00 p&p. Cheques and POs to:

Maggot Splat

(continued from previous page)

of them are a bit vicious. Never mind you think, you can use your world famous Haze gun — Hurt and Zap 'Em — on them and rid your beautiful garden of all those horrible creepy crawlies.

So the scene is set for an epic show down of man against bugs in this game for the Amstrad. In the game you control the laser base at the bottom of the screen and may move in all directions in your efforts to remove the maggot from the garden. The maggot is however incredibly thick and even though you shoot it, it doesn't realise it's dead but instead splits up and each segment has its own life. Thus you must shoot each section of the maggot. This task is hampered by the other creatures in the garden. There are also spiders, fleas, and snails.

Shots worth 50 points

Fleas simply drop from above and if they encounter a mushroom, they jump over it. Spiders generally stay away from the laser base but if they hit a mushroom, they poison it so when a maggot hits it the maggot plumes down dead. The touch of any of these creatures is deadly.

For each snail shot you get 50 points, each spider is worth 50, each flea is worth 30 and each section of the maggot is worth 20. Mushrooms may be shot and each section of mushroom is worth 1 point.

This game is written in machine code and so features very smooth graphics which in the case of the laser base is interrupt driven to give an extra smoothness. The game may be played with either keyboard or joystick.

To set the game, type in listing 2 and save it to tape with SAVE "MAGGOTS"

Next type in listing 1 and run it. If an error is found, correct the error and re-run the program. Repeat this until no errors are found and then save machine code to tape directly after "Maggots with SAVE 'CODE'",b,30000,4000

The game may now be run and loaded from the tape with RUN "MAGGOTS"

Listing 2.

From the black and white pages
of a dusty book emerges the
colourful and gripping
adventure of

THE NEVERENDING STORY

Save the world of "Fantasia" in this thrilling adventure. Cast as the hero Atreyu and aided by Falcor, the Luck Dragon, you face the trials and terrors of the ever consuming "Nothing".

Enter the quest in this richly illustrated and highly imaginative computer movie.

Ocean Software is available from
selected branches of: WHSMITH, John Menzies, WOOLWORTH, LASKYS, Rumbelows, Greens, Spectrum Shops and all good software dealers. Trade enquiries welcome.

HOW DO YOU MAKE A COMPUTER SHARPER?

PLUG IT INTO A PHILIPS PERSONAL MONITOR.

A Philips personal monitor gets the very best out of your computer. It makes using your computer more rewarding as the definition and resolution gives the clear display you need.

Philips offers you a complete range of both colour and monochrome monitors. One of them is exactly right for your computer. With over 50 years in screen technology, Philips know how to give you the right image.

Philips personal monitors are suitable for virtually all personal and home computers. Just complete the coupon and we'll send you full information.

PHILIPS. TAKE A LOOK AT OUR IMAGE.

Post this to: Stephen Paul, Marketing Manager, Computer Monitors, Philips Electronics, City House, 420/430 London Road, Croydon, Surrey CR9 3QR

Split-screen

You've probably seen adventure games with scrolling text in a few lines at the bottom of the screen, and some sort of picture at the top. Often this effect is produced by dividing the screen horizontally in two parts, with the screen taking part of its information from one display, ordinary text in our example game, and part from another — bitmapped or user-defined graphics characters.

We're not talking here about windows or pop-up menus; these have to be programmed by moving stored-up portions of Ram into the screen, and the overwritten parts have to be stored elsewhere or reprinted. Nor are we discussing the simpler effects where, typically, the border of the screen appears as erratic colored bands, and true interrupts aren't used.

Splitscreen graphics rely on the fact that the screen is

scanned from top to bottom 50 times a second or so; the computer is fast enough to be able to take time off its normal tasks to alter the screen's parameters regularly at every scan.

Raster interrupts

Raster interrupts: VIC-II is a chip controlling TV output. These are the relevant locations for us:

D013's high bit is bit 8 of the raster scan line.

D012 = 8 lower bits of the scan line; so the maximum range is 0-511. When read, these registers show which screen line is being processed; writing to them sets an interrupt point.

D01A sets various interrupts and clears the corresponding flags after an interrupt. We're interested in bit 0; setting this high will cause an interrupt to occur when the TV scan line matches the value put into the two registers above.

D019's bit 0 must be cleared if we wish to cause further interrupts.

Interrupts are used by the 64 to read the keyboard; we'll have

to add our own routines. This sort of thing is typical: (i) in Basic, we use POKE 56333,127 to turn off the ordinary, time-controlled interrupts.

POKE 788,0: POKE 789,192 redirects interrupts to \$C000 (49152), the 64's free area of Ram. Then, after adding a routine at \$C000, POKE 53274,129 turns raster interrupts on.

"Your Computer", June '85, has my article listing all screen positions available on the 64. They are controlled by the contents of DD00 (56576), D018 (53272) and \$288 (648). To keep things simple, we'll use two screens, one starting at 32768, the other at 38912. These positions, unlike most others, allow VIC-II to use the inbuilt character set without the need to move it around in memory. However, we do have to poke the top of Basic to prevent it overwriting the screens.

Another actor in the drama is colour Ram: a single block of memory (D800-DBE7) which controls the principal colour in

Assembly language listing.

INT	C000	LDA	D012	;Read raster line
	C003	CMP	\$50	;Comparison decides whether
				top or bottom
	C005	BCC	TOP	;Branch if at top of screen
	C007	LDA	\$00	
	C009	STA	D012	;Next interrupt will be at scan
				line 0
	C00C	LDA	\$05	
	C00E	STA	D018	;Reset screen to start at 32768
	C011	BNE	EXIT	;Exit
	C013	LDA	\$91	
TOP	C015	STA	D012	;Next interrupt at line 145 —
				about midscreen
	C018	LDA	\$15	
	C01A	STA	D018	;Reset screen to start at 34816
	C01D	LDA	\$01	
EXIT	C01F	STA	D019	
	C022	JMP	EA31	Exit to normal keyboard
				reading routine

(continued on next page)

Split-screen

(continued from previous page)

each character of 8 by 8 dots. The fact that only one block is available can cause problems.

If you're experienced in 6510 machine language, you'll be able to follow how the interrupt handling routine separates incoming interrupts into two types, and swaps the screen position depending on whether the line being scanned is at the top of the screen or midway. If you don't know ML, just try the Basic version later.

Type in this program, Save it, and Run. (Note: Stop-Restore, then Run 1, will get you back to normal in emergency).

POKE 56576, 149 combined with the interrupt's pokes into

Rae West has written a 600 page reference book. *Programming the Commodore 64*, recently published by level Ltd. It is obtainable from Biblos Distribution, Star Road, Partridge Green, Nr Horsham, W. Sussex at £14.90 plus £1 post.

```
0 GOTO 10
1 POKE 56576,151:POKE 53272,23:POKE 648,4:END
10 POKE 56333,127: POKE 788,0: POKE 789,192
20 POKE 55,0: POKE 56,128: CLR
30 FOR J=49152 TO 49188: READ X: POKE J,X: NEXT
40 POKE 56576,149: POKE 648,128
50 POKE 53265,PEEK(53265) AND 127: POKE 53266,0
60 POKE 53274,129: REM RASTER INTERRUPT ON
1000 DATA 173,18,208,201,72,144,12,169,0,141,18,208,16

1020 DATA 169,1,141,25,208,76,49,234
```

D018 (= 53272 in decimal) make the screen switch, so the bottom half starts at 32768, and the top half starts at 34816. Now, POKE 648,128 causes Basic to write to the first of these, while POKE 648,132 writes to the second.

```
0 GOTO 10
1 POKE 56576,151: POKE 53272,23: POKE 648,4: END
10 POKE 56333,127: POKE 788,0: POKE 789,192:
...ETC...
```

```
1020 DATA 169,1,...
```

This article is just an

introduction to the technique: there's insufficient space for really detailed treatment. However, the approach can be extended without too much trouble to increase the number of sprites above the normal meagre, eight by splitting the screen into several zones — *Programming the Commodore 64* has a specimen 32-sprite program, number 12-34 on disc), or to mix bitmapped pictures with text (on disc too).

The technique is quite

attractive because of its elegance — very little processing time is used up, and effects which are otherwise impossible can be achieved. Some programmers love it — like Jeff Minter of furry animals fame.

64 Roms vary somewhat: older Rom machines handle the space (blank) character differently, so the colour Ram area shows odd effects. You may find you 64, with an older Rom, doesn't run the Basic program very successfully.

CAR CURE

CAR CURE will transform your micro into an expert mechanic to help you find faults on your car and then determine the cure. Technical Colleges buy **CAR CURE** to help students learn about the faults cars suffer, as well as their symptoms and cures. Now you too can benefit!

Complete with comprehensive 5000-word **User Guide** and packaged in a long-life plastic wallet. Export orders get American-English cross reference. All for less than many garages charge for an hour's work!

Tape for **Amstrad CPC464** only £9.95
Discs for **CPC464, 664, 6128** at £13.95 or will copy onto your disc for only £9.95
Tape for **48K Spectrum** (microdrive transfer instructions free, on request) at £9.95
Disc for **BBC** (state 40 or 50 track) at £11.95

ROMANTIC ROBOT present

multiface one™

No1 Spectrum multipurpose interface with

- 1) Fully automatic and universal 100% push-button
back-up of any program to cartridge, disks, wafer, tape
- 2) Joystick interface
- 3) Composite video interface

All three in one compact box at an amazing price of **£39.95!**

- * Menu-driven with prompts & one-touch commands turning a complex task into a trivial procedure:
1) Push button 2) Select function - exit/return/save/change syntax 3) Input name 4) Select destination - tape/cartridge/wafer/disk
- * Automatic intelligent "compressed" saving for fast re-loading & economizing on space on cartridges, disks etc.
MULTIFACE saves only the relevant parts of RAM and leaves out the rest.
- * SAVE to any type of peripheral - default syntax for MICRODRIVE, WAFADRIIVE & TAPE can be changed for disk systems etc.
Transfer from one peripheral to another if both attached at the same time, or save from one to tape, swap, reload & save to the other one
- * Can be used not only for pure back-ups; you can, eg.: * stop any program and restart anytime later or also * study/alter/customize
and then save, continue, etc. This way you can load and continue a game from where you got lost, poke infinite lives, customize programs
* "warm reset" - recover from a "crashed" computer (escape from infinite loops when the keyboard is inoperative, etc.)
* save just a screen or leave out screen when saving a program
- * Designed to remain attached to RUN programs it saved as it is meant only for personal use in accordance with copyright laws
- * No extra software - has internal 8K EPROM & 2K RAM
- * Through extension bus for connecting other peripherals

Disc Cat

I was mildly embarrassed recently when a friend offered me some non-copyright programs. Instead of the usual muddle of discs they were neatly arranged and numbered in a box on a shelf. What was intriguing was that he had a card index itemising each file and the disc it could be found upon.

The embarrassment came a few weeks later when he returned the visit. Offering to repay the programs in kind I performed my usual scramble through the pile of discs on my shelf and madly started to *Cat them hunting for the file I was looking for.

Card indexes are not for me, the main reason being that I cannot organise myself efficiently enough to update them. But possibly more importantly I don't possess massive stocks of computer equipment for it to sit idly by while I fill out forms.

The specification for this program came from this experience. what I wanted was a program which would allow me to insert the discs one at a

Fintan Culwin sorts out BBC discs

time. After inserting the disc I would have the option of rejecting some of the files. The remainder would be filed somehow. When all the discs had been processed, it would be possible to produce a printed listing of the information.

Considering the problem further, it would have to be possible to add to this list as my collection of discs grew, rather than recatalogue the entire file. If a file grew, for example the new information would have to overwrite the old information rather than have it entered as a

separate entry.

To accommodate this I would have to give each disc in my collection a name and a number. The first part of the printout would be an ordered list of the discs and their titles. The second part would be a list of the files in alphabetical order, together with the number of the disc that they could be found upon and the filing system information contained upon them.

This seemed simple enough for me to manage. So, satisfied that I could accommodate my ways to the system and that the

system would satisfy my needs, I started the detailed planning stage.

The first and simplest problem concerned the storage of the information. With even a moderate collection of full discs it would probably be impossible to hold all the information in the computer's memory and manipulate the information at the same time. So the information would have to be filed on disc and manipulated there.

The second problem was how

(continued on page 93)

POOLSWINNER

THE ULTIMATE POOLS PREDICTION PROGRAM

- **MASSIVE DATABASE** Poolswinner is a sophisticated Pools prediction aid. It comes complete with the largest database available - 22000 matches over 10 years. The database updates automatically as results come in.
- **PREDICTS** Not just SCOREDRAWS, but ALWAYS, HOMES and NO SCORES.
- **SUCCESSFUL** SELEC guarantee that Poolswinner performs significantly better than chance.
- **ADAPTABLE** Probabilities are given on every fixture - choose as many selections as you need for your bet. The precise prediction formula can be set by the user - you can develop and test your own unique method.
- **SIMPLE DATA ENTRY** All team names are in the program. Simply type in the reference numbers from the screen. Or use FIXGEN to produce fixture list automatically (see below).
- **DISC/MICRODRIVE COMPATIBLE** Tapes supplied with conversion instructions.
- **PRINTER SUPPORT** Full hard copy printout of data if you have a printer.

AVAILABLE FOR Spectrum (48K), Commodore 64, VIC 20 (+16K), AMSTRAD, BBC B, Atari (48K), ZX81 (16K), Dragon, Apple II, ELECTRON

PRICE £15.00 (all inclusive)

NOW
AVAILABLE

FIXGEN 85/6

AT LAST! No more struggling for hours to get the fixture list into the computer. FIXGEN has been programmed with all English and Scottish fixtures for 1985/6. Simply type in the date, and the full fixture list is generated in seconds. Fully compatible with Poolswinner.
POOLSWINNER with FIXGEN £16.50 (all inclusive)

COURSEWINNER v3

THE PUNTERS COMPUTER PROGRAM

You can develop and test your own unique winning system by adjusting the analysis formula, or use the program in simple mode. Coursewinner V3 uses statistical analysis of major factors including past form, speed ratings, course statistics, prize money, weight, going, trainer and jockey form etc, etc. It outputs most likely winners, good long odds bets, forecasts, tricasts etc. The database includes vital course statistics for all British courses. You can update the database - never goes out of date.

AVAILABLE FOR Spectrum (48K), Commodore 64, BBC (B), AMSTRAD, Atari (48K), Apple II
PRICE £15.00 (all inclusive) includes Flat AND National Hunt versions.

Disc Cat

(continued from page 91)

to extract the information about the catalogue from the disc. Perusing my copies of the BBC's OS guides it seemed possible but tedious to obtain the information by making a series of system calls — the first to obtain the disc catalogue and subsequent calls for each file in the catalogue. The official way however is not always the most elegant. One official call, *Info*, would yield the required information but display too much of the information on the screen, and with a full directory overflow one full screen.

It is here where the wonderful flexibility of the BBC's operating system came to the

rescue. Issue the *Info call and trap the information returned before it gets to the screen. Specifically direct it to a reserved area of memory, where the filenames can be extracted for display on the screen and the rest of the information held available for filing. It is possible to do this as most operating system routines are vectored through the user Ram, allowing them to be trapped.

Having written and tested this part of the program, I then started to consider in more detail the structure of the file which would contain the information. As the size of the file was indeterminate, and the information had to be presented in a certain order, it seemed

sensible to maintain an ordered file.

There are two choices when doing this. The most obvious way would be to hold an ordered list of disc titles, followed by an ordered list of filenames. Simple to understand but difficult to implement.

If a new disc or filename had to be added to the list it would

result in a great deal of shuffling of information on the disc. The second method of storing an ordered list is more difficult to understand and code but much easier to implement on a filing system.

The information is physically stored in the sequence it is collected in. Associated with

Figure 1. Details of a double entwined linked list
(a) before addition of file BBBBBBB

Record number	Pointer	Information
1	3	dummy (start of titles list)
2	4	dummy (start of filenames list)
3	7	title of disc # 1
4	5	filename AAAAAAA
5	8	filename CCCCCC
7	0	title of disc # 2 (and end of list)
8	0	filename DDDDDDD (and end of list)

(b) after addition of file BBBBBBB

Record number	Pointer	Information
1	3	dummy (start of titles list)
2	4	dummy (start of filenames list)
3	7	title of disc # 1
4	9	filename AAAAAAA
5	8	filename CCCCCC
7	0	title of disc # 2 (and end of list)
8	0	filename DDDDDDD (and end of list)
9	5	filename BBBBBBB

(listing continued on next page)

(continued from previous page)

Using this idea, the program keeps a 33-byte record. The first two bytes are the record pointer. For a disc title the next three characters indicate the disc number in Ascii, and the disc title follows terminated by &FF. Following the pointer there is the filename. This is always nine bytes long padded out by spaces if necessary. The filename is followed by its disc number as above and 12 further bytes giving the load address,

When all is to your satisfaction press Return to start filing the details. As each file is processed its name is shown on the screen. A side-product of this program should be a testing

The print routine starts by asking for a catalogue title and a date reference. To skip the printout, enter "none" as the catalogue name. The catalogue will be presented as a list of discs and titles in numeric order, followed by the list of filenames in alphabetic order. The list is paged with headings, footings and a page count. Two printer control codes can give details.

The printout routine can be

extracted from the rest of the program and used in isolation. Apart from one part it is all contained in the final section of the program starting with PROC-printout. Add to this FN-getin, PROC — delt and FN-ceak and the routine can be applied in isolation. Alternatively for additional copies of the catalogue load the whole program and type PROC-printout from the keyboard.

One final and rather important point. As new files are added the catalogue file Filecat has to grow. To avoid "can't extend" errors, and preserve your data in case of filing system accidents, take a blank disc, copy the Filecat program and the current Filecat file to it, in that order.

MATCH DAY

Match Day is no ordinary soccer game. Blistering 3-D action, total animation and automatic camera scan are just some of the intricate techniques which make Match Day the league leader of soccer games.

Now follow the "Action":

Your striker traps the ball from a perfectly placed corner-kick, takes on the defender and dribbles neatly round him making space to

his powerful half-volley rattles the cross-bar, the ball returns, floating menacingly above the penalty

area and your star striker seizes this half-chance

to head the ball decisively into the back of the net...
...GOAL!

six-yard box. There is no time to control the ball, your player must commit himself to a snap shot on goal...

Match Day is as compelling as soccer itself. You will marvel at the depth of play and ball control offered only in MATCH DAY...
Shoot to win!

Megamon

Megamon is a sophisticated disassembler/monitor which will work on the complete range of Amstrad machines. Among its many features are an intelligent move memory facility, control over the lower Rom state, machine code trace, read or write object code to tape or disc, full memory dump to the printer, and a disassembly that will even understand all of the 102 undocumented Z-80 instructions. All of the controls are accessed through single key-presses so Megamon is easy to understand and simple to use.

Listing 1 is the short loader program for Megamon. Type this in and save it as the first thing on your tape as "MEGAMON". Listing 2 is the standard hex-loader program which pokes in the hex code from DATA statements. When all the bytes have been successfully entered then the loader program will prompt you to hit any key when ready to save the code. Ensure your tape is positioned after the megamon Basic loader.

To run the program rewind the tape and type RUN "MEGAMON"

When the program has loaded the little screen will appear and you will be asked for an address at which to load Megamon. This can be any address from 4000H up to 9000H. Obviously the monitor will not work if loaded underneath the lower Rom.

Once the address has been entered the object code for Megamon is loaded and you will be presented with Megamon's Front Panel screen display:

Laurie Sinnett's monitor takes you places you've no right to see in your Amstrad.

Z80 Registers — The top right of the screen shows the Z80 registers AF,BC,DE,HL,IX,IY together with the stack pointer (SP) and the program counter (PC). The register contents are shown (at start-up these are always zero) and then the contents of the memory location addressed by that register. There is also the register cursor ("I"), which points to AF on start-up. Its use will be discussed shortly.

Lower Rom State — Below the register display the state of the lower rom is shown, either Enabled or Disabled.

Memory Display — The memory display occupies the bottom of the screen and its purpose is to display the bytes around the memory pointer, indicated by ". The bytes can be displayed either as hex or as ascii.

PC Instruction — The instruction at the Program Counter is constantly displayed above and to the left of the Memory Display.

List Display — The left of the screen above the Memory Display is taken up by the List Display. At start-up this display will be blank, but if you are eager to see it in action then for the moment press L followed by a full-stop. You will see the 14 instructions from address zero disassembled for your perusal.

Unfortunately, space does not permit a detailed discussion of the undocumented instructions, needless to say their use is becoming much more frequent in many of today's top games. Disassemblers that can cope with them are rare and the format for displaying them varies. For example, look at the instruction: ADD A,IXL

This means "Add A to the low-byte of IX, the 'L' tagged on to indicate the low-byte. Alternatively, you can use.

ADD A,IXH

This means 'Add A to the high byte of IX i.e. add A to I. Megamon would display the two instructions above as follows:

i) ADD A,IX

ii) ADD A,IXH

The letter in capitals indicates which byte of the register pair is being operated upon. The same applies to all undocumented instructions that use the IY register pair.

There now follows a list of the Megamon keys and a full explanation of their usage.

The Four Cursor Keys: The four cursor keys above the function pad are used to move the Memory Pointer ">" within the Memory Display in the appropriate direction, enabling you to step up or down through the memory, in steps of one or eight bytes at a time.

The Full Stop Key: Pressing the full stop will advance the Register Cursor ">" onto the next register pair in the Register Display.

B — Return to Basic: Pressing this key will produce the prompt

**TOP SECRET
Z-80 CODES**

"Are you Sure?", In response to this press "Y" if you wish to leave Megamon and return to Basic. Any other key press will return you back to Megamon itself. When Megamon returns to Basic it restores the Roms to whatever they were at start-up.

C — Clear List Window: The List Window can be cleared at any time by pressing the "C" key.

D — Display Memory: This allows you to change the address around which the Memory Display works. You will be asked for a new address for the Memory Pointer — this must be entered as a hex number terminated by a Return. If, instead of a hex number, you

press the full stop key then the Memory Pointer will be set to whatever address the Program Counter currently holds.

The address is displayed, along with its contents. You can either enter a new hex number for this location or press Esc to exit the memory change. When a new number is entered the memory pointer is advanced to the next location and your options are the same again. At any time during the input of a number you can press the Esc key to abort and leave the Memory Pointer unchanged.

E — Toggle Lower Rom State: Press the "E" key and the Lower Rom will be toggled between Enabled and Disabled.

F — Fill Memory: The prompt "Fill>" appears and the number entered here will be the start address for the program to use. You are then asked for the address at which the program will end its fill, and finally the byte to fill the memory with. For example, if you enter 8000 in response to "Fill >", 8100 in response to "To >", and FF in response to "With >", the memory between 8000 hex and 8100 hex will be filled with FF (255 decimal).

G — Go: This allows you to execute the object code currently under examination with the use of 'breakpoints, i.e., places at which the object code is stopped in its tracks and control returned to the monitor for you to examine the registers etc.

The address which you enter in response to 'Go>' will be the address at which the monitor starts execution of the object code. As usual with all prompts, if you press the Esc key then the

operation will be aborted. You are then asked for an address — "To >" — at which control will be returned to Megamon i.e. the address at which you wish your breakpoint to be inserted.

When you have entered this address Megamon will go off and execute the code: When the breakpoint has been reached, assuming that the code has not caused a fatal crash, a small line will be displayed on the screen and this means that Megamon is waiting for you to press any key before updating all of its displays.

H — Search For String: The prompt "Search For >" is displayed. You can now enter a sequence of up to 255 bytes which will form the string which Megamon will search for. Each number should be entered by pressing Return and by pressing Return on its own you will terminate the string.

At this stage, assuming the string can be found, Megamon will update the Memory Display and the Memory Pointer > will be pointing to the second byte of the input string. Also see the explanation of the next instruction, "A".

A — Find Next Occurrence: Pressing the "A" key will tell Megamon to find the next occurrence of a string you have searched for using H.

I — Toggle between Ascii and Hex: By pressing the "I" key you can toggle the Memory Display Memory so that it shows either Hex or the Ascii equivalents.

L — List: You can enter a new address from which the disassembler will list its 14 instructions. However, there are two other alternatives to entering

a new address. If you press the full-stop key in response to List> then the disassembly will begin from the address currently held in the Program Counter.

Alternatively you can press Return in response to the prompt and the disassembly will continue from where it left off.

M — Move a Block of Memory: The prompt move > will be displayed and the address you enter will be the start of the memory block you wish to move. The prompt "End. 1" asks you for the end address of the memory block and the prompt "To >" asks you for the destination address for this block. The routine is "intelligent" so that if your destination address lies within the limits of the block you wish to move Megamon takes this into account and performs the move correctly.

O — Read Object Code: This reads a block of object code from in from tape or disc, depending on which system is in use. You are prompted to enter a filename and then an address at which the code will be loaded. Needless to say, you should take care not to overwrite Megamon.

P — Printer Disassembly: With this option you can produce a disassembly of any length to your printer, you could even list the Amstrad Rom. Then first address you enter, in response to "Print 1", is the start address for the disassembly, and the second address is the end. Assuming the printer is connected a disassembly will now appear on the printer which can be aborted at any time by pressing the Esc key.

R — Change Register: By

pressing the "R" key you can change the value of the register pair currently pointed to by the register cursor >. The register pair will take on the value you enter at the keyboard.

S — Single Step: Megamon will execute the current instruction at the Program Counter when you press the "S" key, allowing you to examine the effects of the code upon the registers and memory. This function will also single-step through a Call instruction.

T — Trace: If you press the "T" key Megamon will execute the instruction at the Program Counter in the same way as the "S" function above, except that using "T" allows you to execute a Call instruction automatically.

W — Write Object Code: This writes a block of code to tape or disc under a given filename. You are prompted to enter the filename and then the first and last (inclusive) addresses of the block you wish to write.

X — Toggle Alternative Registers: Pressing the "X" key will toggle the Register Display between AF,BC,DE, HL and the alternate registers AF',BC',DE',HE'. You are advised to leave the values in the alternate register set unchanged as these are in constant use by the firmware (for further details see the *Amstrad Firmware Specification* — Soft 158, Appendix XI).

If the sight of all those hex bytes is enough to put you off then copies of Megamon, recorded on quality blank tapes, are available a cost of £3.50 each, including postage, from Laurie Sinnett, 20 Autumn Street, Burley, Leeds LS3.

520ST

POWER WITHOUT THE PRICE

THE NEW ATARI 520ST

Under the new leadership of Jack Tramiel (former boss and founder of Commodore Business Machines), Atari Corporation have marked their entry into the world of business/personal computers with a machine which leaves the competition standing. Tramiel's slogan 'Power Without the Price' has been implemented in the manufacture of the new 512K Atari 520ST colour computer which offers the user amazingly high performance at an incredibly low price. Launched as a work-station, this new system incorporates seven software packages as well as the 520ST computer with 512K RAM, mouse controller, high resolution monochrome monitor (640x400), 95 key keyboard (with 18 key numeric keypad), MIDI interface, GEM and a 500K 3 1/2 inch disk drive, all for the package price of only £651.30 (+VAT = £749). Dubbed the 'Mac beater' and the 'Jackintosh' (after Atari's Chief, Jack Tramiel), Atari's new machine has been directly compared with the Apple Macintosh RRP £2595 (+VAT = £2985) which offers similar features and capabilities but at a much higher price. Favourably reviewed by the UK's highly critical specialist computer press, the 520ST is likely to make a great impact in this country as a sophisticated alternative to an IBM PC, APRICOT or APPLE MACINTOSH. Unlike its overpriced competitors, the Atari 520ST can be linked up to a colour monitor to unleash a choice of up to 512 colours. The addition of colour brings out the full potential of graphics packages such as GEM.

USER FRIENDLY GEM OPERATING SYSTEM

The power of the ST is harnessed and made user friendly by the new operating system 'GEM' from Digital Research. GEM stands for Graphics Environment Manager and allows a user friendly colour or B/W graphics interface which closely resembles that of the Macintosh. This similarity extends to the use of moveable resizable windows, icons to represent objects such as disks and disk drives, and the use of pull down menus and a mouse. The advantage of all this is that the computer becomes extremely easy to use. GEM has now been implemented for the Acorn, ACT, Atari, IBM, ICL, and Olivetti. Software written for GEM on one computer should also run under GEM on another computer. This will enable the market to quickly produce a large library of standard interchangeable software.

FREE SOFTWARE AND FUTURE EXPANSION

The Atari 520ST comes supplied with seven free software packages as listed below: 1) TOS - Tramiel Operating System based on CPM 68K. 2) GEM Graphics Environment Manager by Digital Research (DR) giving a WIMP (Window, Icon, Mouse, Pull down menu) environment. 3) DR GEM Paint for creating graphics masterpieces. 4) DR GEM Write for word processing. 5) Logo learning language to enable you to write your own programs easily using turtle graphics. 6) DR Personal Basic a powerful user friendly version of the Basic programming language. 7) BOS operating system giving you access to dozens of business applications packages already available on the market. Designed with future expansion in mind, the ST also features a host of different interfaces to the outside world and an impressive list of accessories is planned. Atari will soon be releasing a 1000K (1MB) 3 1/2 inch disk drive, and a 15MB hard disk storage system as well as a mass storage compact disk (CD) player capable of storing an entire 20 volume encyclopedia on one disk. A full range of inexpensive printers are planned including dot matrix, daisywheel and thermal colour printers. With its unbeatable graphics, speed and software at a price which is far below that of any comparable personal computer currently on the market, the ST is all set to do battle with the competition. To receive further details of the ST from Silica Shop, just fill in the coupon below with your name and address details and post it to us.

Silica Shop Price: £651.30 + £97.70 VAT = £749.00 This price includes:

- ★ 512K RAM
- ★ B/W MONITOR
- ★ MOUSE
- ★ 500K 3.5" DISK DRIVE
- ★ GEM
- ★ KEYBOARD (95 KEYS)

£49

ATARI 520ST SPECIFICATION

MEMORY
512K RAM (524,288 bytes)
16K ROM expandable to 320K
Port for addn 128K plug-in ROM cartridges
200K TOS operating system

GRAPHICS
Individually addressable 32K bit-mapped screen with 3 screen graphics modes:
320x200 pixels in 16 colours (low resolution)
640x200 pixels in 4 colours (med resolution)
640x400 pixels in monochrome (high res)
16 shades of grey in low res mode
512 colours available in low/medium res
8 levels of each in red, green and blue

ARCHITECTURE
4 custom designed chips:
GLUE Chip - MMU Memory Mngmnt Unit
DMA Controller - Graphics Processing Unit
1632 bit Motorola 68000 processor at 8MHz
eight 32 bit data registers
eight 32 bit address registers
16 bit data bus/24 bit address bus
7 levels of interrupts/55 instructions
14 addressing modes/5 data types

DATA STORAGE
High speed hard disk interface
Direct memory access 1.33 Mbytes per second
CD (Compact Disc) interface
Built in cartridge access
Dedicated floppy disk controller

DISK DRIVE
500K (unformatted) s/sided 3 1/2" floppy d/drive
349K (formatted) storage capacity

SOUND AND MUSIC
Sound Generator
Frequency control from 30Hz to above audible
3 voices (channels) in wave shaping sound in addition to a noise generator
Separate frequency and volume controls
Dynamic envelope controls
ADSR (Attack, Decay, Sustain, Release)
Noise generator
MIDI interface for external music synthesizers

KEYBOARD
Separate keyboard microprocessor
Standard QWERTY typewriter styling
Ergonomic angle and height
95 keys including 10 function keys
Numeric keypad - 18 keys including ENTER
One touch cursor control keypad

MONITOR
12" screen - high res monochrome monitor
640x400 monochrome resolution
Note: Some of the above specifications are pre-release and may therefore be subject to change

VIDEO PORTS
Display - Low Resolution - 40 columns
Med/High Res - 40/80 plus cols
Medium res RGB (Red/Green/Blue) output
High resolution monochrome (Black & White)

COMMUNICATIONS
Bidirectional centronics parallel interface for printers, or modems capable of input/output
RS232C serial modem/prnter interface
VT52 Terminal Emulation Software
Maximum Baud Rate up to 19,200
High speed hard disk interface
Floppy disk controller (Western Digital)
2 joystick ports (one for 2 button mouse)
MIDI interface for external music synthesizers

GEM WIMP ENVIRONMENT
WIMP - Window Icon Mouse Pop-down menus
Two button mouse controller
Icons/Pull down menus/Windows
GEM VDI - Virtual Device Interface
GEM AES - Application Environment Services
GEM BBT - Bit Block Transfer
Real time clock & calendar

SOFTWARE
GEM environment
User friendly Macintosh style operation
TOS - Tramiel Operating System
Atari's own system based on CPM/68K with hierarchical directory & file structure plus a host of MS DOS & UNIX command structures
BOS - Business Operating System
to run any standard BOS business programs
GEM desktop
with GEM PAINT graphics mgmt system and GEM WRITE word processor
Personal BASIC and DR Logo
originally written by Digital Research (DR)
Very much like those on other machines except for the extensive use of pull down menu, mouse control and windows

VARIOUS
Dimensions: 470mmx340mmx200mm
Replaceable external power supplies
Expansion: 3 1/2" floppy disk drives 500K/1,000K (two drives can be connected)
3 1/2" 15MB hard disk
CD (compact laser disc)
Dot matrix & d/wheel printers (black)
Thermal dot matrix (colour)
RGB & monochrome monitors

LANGUAGES
BASIC & LOGO supplied
Many others will soon be available, including:
Assembler, BCPL, C, Cobol, Compiled Basic, Lisp, Modula-2 and Pascal

MACINTOSH v F10 v 520ST

"Imagine a Fat Mac - the 512K Apple Macintosh - but with a bigger screen, a far bigger keyboard with numeric keypad, cursor and function keys, and colour. That gives you some idea of what the Atari 520ST is like, except for two important things. First the Atari seems faster. Second the Atari system is about one third of the price." June 1985 - Jack Schofield - PRACTICAL COMPUTING

PRESS COMMENT

"Atari's new corporate image as an aggressive low cost computer maker is likely to mirror that of Commodore where Mr. Tramiel established the maxim that 'Business is war'." August 21st 1984 **FINANCIAL TIMES**

"This is the only personal computer I know of that comes with a Mid interface as standard." Peter Bright March 1985 **PERSONAL COMPUTER WORLD**

"The GEM version running on the Atari 68000 machines will have the additional advantage of having the PC version standing." April 6th 1985 **PERSONAL COMPUTER NEWS**

"It would seem that GEM offers the ideal operating system." March 7th 1985 **POPULAR COMPUTING WEEKLY**

"I found it (GEM) extremely easy to use and was very impressed with the way in which it disguises the unfriendly hardware and operating systems lurking under the surface." Peter Bright Feb 1985 **PERSONAL COMPUTER WORLD**

"The electronics in the machine are a work of art... The heart of the 520ST is a Motorola 68000, one of the most powerful 16-bit processors around and in many respects it is close to being a 32-bit chip... when the machine appears in the shops, it'll be at the front end of the queue to buy." Peter Bright June 1985 **PERSONAL COMPUTER WORLD**

"This machine is significantly more powerful than an IBM PC... If it's possible to design a sure-fire winning machine, this is it." May 11th 1985 **PERSONAL COMPUTER NEWS**

"... the use of GEM makes the new range of Atari computers so similar to the Macintosh (with the added attraction of colour, that they are already being called 'Jackintoshes')." May 2nd 1985 **COMPUTING**

"The new Atari ST computers truly represent to the consumer what Jack Tramiel is saying - easy-to-use computing power without the price." March 1985 **ANALOG COMPUTING**

"It (the ST) uses the most modern technology that is affordable. In a package that gives a professional impression." May 22nd 1985 **POPULAR COMPUTING WEEKLY**

"The Atari ST is one of the most elegant designs I have seen... Atari has used an original and elegant method of memory management which should make the ST faster than any other PC on the market - in any price bracket... The £4K dollar question is would I go out and spend money for one? To which the only answer is 'Try and stop me!'" John Lambert July 1985 **ELECTRONICS & COMPUTING**

"The 520ST is technically excellent... The 520ST hardware is the new standard by which others will be judged." July 1985 **YOUR COMPUTER**

SILICA SHOP

ATARI WE ARE THE UK's No1 ATARI SPECIALISTS ATARI

At Silica we have been successfully dedicated to Atari ever since their products first appeared on the UK market. We can attribute our success largely to the Atari specialisation which we practice and to the user back-up we provide. Rest assured that when you buy a piece of Atari hardware at Silica you will be fully supported. Our mailings giving news of software releases and developments will keep you up to date with the Atari market and our technical support team and sales staff are at the end of the telephone line to deal with your problems and supply you with every need. With our specialist bias, we aim to keep stocks of all the available Atari hardware, software, peripherals and accessories. We also stock a wide range of Atari dedicated books and through us, the owners on our list can subscribe to several American Atari dedicated magazines. We can provide a full service to all Atari owners and are now firmly established as the UK's NUMBER ONE Atari specialists. Here are just some of the things we can offer to our customers.

- * FREE POST & PACKING ON MAIL ORDERS
- * FREE NEXT DAY SECURICOR DELIVERY
- * INFORMATION MAILING SERVICE
- * TECHNICAL SUPPORT TEAM
- * HIGHLY COMPETITIVE PRICES
- * AFTER SALES SUPPORT SERVICE
- * REPAIR SERVICE ON ATARI PRODUCTS

If you would like to be registered on our mailing list as an Atari computer owner, or as a person interested in buying an Atari machine, let us know. We will be pleased to keep you up to date with new Atari developments free of charge. So, return the coupon today and begin experiencing a specialist Atari service that is second to none.

Do you already own a computer
If so, which one do you own?

What the program does is provide you with a Basic-keyword editor with which you can modify or alter any of the Commodore 64's 76 Basic commands, operators and functions. For example you could change the End statement to Terminate, the Goto statement to Jump, the For and Next commands to Loop and Endloop, the + and - operators to Plus and Minus, or the Len function to Length.

"My two top contenders"

1. *Scooby Doo* by Elite

In the red corner we have Scooby Doo – a real heavyweight when it comes to catching criminals, ghosts and other things that go bump in the night.

2. *Super Sleuth*

by Gremlin Graphics
And in the blue corner another Super Sleuth. Which one will come out tops? Hard to say, Harry, but both are champs in my book.

THORN EMI Computer Software

International Micro Software Division

"Take a ringside seat and sample the excitement"

CITY HANGER

by New Generation

This fighter doesn't use his fists, man, — but everything else in sight! Cannons, boulders, boomerangs and bombs all come in handy for Cliff who has to do something to stop the bandit shooting up the canyon.

Spectrum 48K

£4.95

GRUMPY GUMPHREY SUPERSLEUTH

by Gremlin Graphics

Keep your eye on the clock and look sharp! All your best moves have to be executed on time or you're in big trouble. Catch the shop thieves and above all keep the Manager happy — my motto exactly!

Spectrum 48K

£7.95

Checkout games for fans anywhere'

MARSPORT

by Gargoyle Games

Box your way out of this one! The World needs a Champion (what about me?) Yes, but you can be the champ here. That is if you sneak the defence plans from the doomed city and reinforce the force sphere. Not easy, with aliens attacking your every move.

Spectrum 48K and Amstrad

£9.95

DYNAMITE DAN

by Mirrorsoft

Count to ten and concentrate. You think you can win on points? Well I tell you this game will have you reeling! He may not be a Jumbo or a Boncrusher, but one thing is certain, Dynamite Dan is hard to beat.

Spectrum 48K

£6.95

Amstrad and Commodore 64

£8.95

"Games to keep you on your toes".

RED ARROWS

by Database

These guys can sure move. But their game is a non-contact sport, if you get my drift. You can try your hand at formation flying, looping the loop and all the other tricks. Duck, dive, dodge, swerve and break — only don't hit anyone here.

Versions for most machines.

Cassette

£8.95

Disk

£11.95 & £12.95

SPOT THE BALL

by Creative Sparks

Two sports classics in one pack, but you only play one at a time, OK? There's soccer and snooker. Both need skill and timing as well as a joystick and 32K ram. Go to it!

Atari 32K

£8.95

SCOOPY DOO

by Elite

Slippery customers throw in the towel when this ace detective is around. With your help he can track down and solve the mystery that haunts his friends. Join the elite band and pit your wits against the spooks.

Spectrum 48K

£6.95

Commodore 64

£7.95

Amstrad

£8.95

SPARKLERS SPECIAL

by Sparklers

A fist full of games at a fantastic price. And nobody is pulling punches here. These games really are the greatest — anyone who disagrees will have me to reckon with! Not to mention Slurpy, Orc Attack, River Rescue and Black Hawk.

Spectrum 48K and Commodore 64

4 games for £7.50

"Non-stop thrills from start to finish"

WHO DARES WINS

by Alligata

Only the brave survive (and the lucky). Upper cuts and left hooks are no good to you here. You need to find the ammunition dumps to knock the stuffing out of the enemy and free your friends.

Commodore 64

£7.95

Amstrad, Spectrum and Commodore 128 versions available soon.

MINI MOFFICE

by Database

Comprising word processor — for writing letters and reports, a database — for storing addresses, and a spreadsheet — for storing complicated numbers. Pretty high-powered stuff, don't you think?

BBC

£5.95

MAD DOCTOR

by Creative Sparks

As Mad Doctor, in this blood-curdingly evil game, the player must create new life out of freshly killed body parts. If he arouses the villagers' suspicions, they'll kill him. A light touch on the scalpel is required.

Commodore 64

£8.95

Win

Spot this month's mystery microgamer and win a fantastic prize. Ten 2-pack program prizes must be won plus single game prizes for the first 100 runners up.

If you think you now the answer, send this coupon to us, no later than 14 December 1985. The first ten correct entries will each receive SCOOPY DOO and SUPER SLEUTH. 100 runners up will each receive a super game for their machine type.

I say the Mystery Microgamer is:

Send me your latest full list of software programs.

IT MAKES DRUMMING SOUND LIKE HARD WORK

SYNDROMIC MUSIC

Whether you want to play along to it, do demo's and record with it, sing along and dance to it or just enjoy programming it – The Syntron Digidrum – Get It!

The Syntron Digidrum comes complete with a hardware user port connector, audio out, trigger out, easy to follow user's guide, software with the first eight digital samples including Crash Cymbal, Snare Drum, Bass Drum, Floor Tom, Hi Tom, Med Tom, Open Hi Hat, Closed Hi Hat and programming functions. The software contains a complete set of demonstration patterns and songs – All this for just **£65.00 Inc VAT.**

There is already a new sound sample set in preparation which will contain over 40 new samples including Syn Drums, Latin percussion, Hand Claps and many more for only **£16.50!** All purchasers of the Syntron Digidrum will receive details of the new sound samples as they become available plus a FREE subscription to the SYNDROMIC USERBASE which includes a membership card and a FREE quarterly newspaper on computer music and computer musicians written by leading music and computer journalists. Please fill out and return the coupon below.

THE BBIG BBBLACK BEAT BBBOX

SYNTRON DIGIDRUM

The Syntron Digidrum is an exciting professional digital drumcomputer designed to operate with the Commodore 64.

Using 'live' digital sound samples which are encoded onto software the user has a programmable drum machine with a sound quality many times the price.

Easy visual grid programming, hear the sounds you enter, 51 patterns available in memory plus 10 songs linking 100 patterns together are possible with full copy, insert and delete functions.

digi ever hear such a sound?

BUFFERS' GUIDE TO MICROS

Starting out in home computing? First Bytes is for you. Just write to *Your Computer* with any hardware or software problems, no matter how small or simple.

A favourite phrase with which experts love to bluff the sucker is "historical reasons". Read on, and learn what to say when such bullies kick bytes in your face.

When I played with government computers, there was an interesting hierarchy. At the top came the almost godlike Cray supercomputer, fed by a lowly IBM 370, running an operating system designed to imitate something 10 years out of date, and up at the sharp end in my office there was an electromechanical teletype.

Clatter, clatter. Deciphering the manuals, I discovered that what I wanted to do required one punched card at the start of my Fortran program. (Yes, they used punched cards. And we edited them by sticking bits of foil over unwanted holes. Men were men in those days.) Or, for *historical reasons*, I could pick the handy alternative of substituting 17 different cards for that single one. Lucky me!

Compatibility was the idea. Somewhere in this research establishment were thick, cobwebbed decks of cards, three operating systems old, which couldn't be let go out of date — so the new system was taught to read the old cards. If historical reasons were the same in education as in computers, we'd all have to cope with English, Latin and Anglo-Saxon ...

History brought us the Qwerty layout: once

supposedly devised to slow typists to the pace of clumsy machines, it seems established forever. Early computer terminals tended to have plain typewriter keyboards with a very few special keys like Control and Escape: the effects are still entrenched in software.

For example, in days before arrow keys, the writers of programs like WordStar wanted to let people move a cursor round the screen. They used Control plus letter keys. Anyone accustomed to typing without staring at the keyboard would have thought that, obviously, you'd press Control and U to move up, Control and L to go left, and so on. The programmers, though, were apparently one-fingered typists, and picked the E, S, D and X keys, presumably because they were bunched together and easy to find by eye. Just remember that E stands for Up and D for Right ...

Now everyone has arrow keys. But word-processors get bad reviews unless they also support the old, not particularly logical key combinations — because reviewers grew up with WordStar and like its keyboard for (ahem) historical reasons. We've likewise grown up with a ridiculously American-slanted 7-bit Ascii character set: each new British computer offers an exciting challenge, as you try to work out where they've put the pound sign.

To be purged with pity and terror, look at the MS-DOS Edlin and MicroSoft Basic line editors. You can't use the arrow keys at all. You can't alter anything which has appeared on the screen: instead, editing is done by a devious process of copying characters from a "template" line. Slowly the truth dawns. On what sort of clattering display is there no way to change a once-printed line ...? Historical reasons strike again: although they've somehow invaded microcomputers, these editors were written for use with teletypes.

The backward-looking trend continues with Apricot's "Xen", a super-fast machine which can be specially downgraded to run slothful IBM software. Will IBM compatibility be a curse on new computers, unto the fifth generation?

Santayana said "those who cannot remember the past are condemned to repeat it" — but I remember it all too well and *still* have to repeat it, every time a program insists on my hitting Control-G instead of the perfectly good Delete key ...

Dave Langford

I COULD DO THAT

As the climax to our competition series — arcade classic re-written in Basic — this month we are asking for a version of Pacman. Once again, the rule is make it short: no more than 20 Basic program lines. You may have to make do with only one ghost and a reduced board layout.

The winner of October's competition, S. Cartwright, 21 Maelog Place, Gabalfas, Cardiff CF4 3ED, shows here how to approach the task.

THE LANGUAGE OF "C"

(continued from previous page)

It's not a language where you struggle to express your thoughts — like assembler or old Basic with no control flow; or modern Basic, Forth, Prolog, Logo, Fortran with no data structures. Nor is it a language which hems you in with theories like Pascal or Ada.

C has a reputation for speed which rests on two things. First, it is a compiled language — one where programs are translated into machine code by a compiler before being run. This makes C programs much faster than those run by an interpreter, where each line in the program is translated into machine code over and over again as the program runs.

Secondly, the facilities of the C language were designed to match the abilities of real computers — so that efficient pieces of machine code can be generated for each line in the program. This is in contrast with some languages which are waiting for new types of computer to run them efficiently.

C can be used to write many different kinds of programs in a very natural way. The chief key is the flexibility of C's data structures. It is simple to write out the data blocks needed to control a graphics chip, a sound envelope, or a disc file-control-block; then the program that uses them just follows on.

As well as the expressive power built-in to C, more power flows from the vast range of library functions available. These are functions — or subroutines — which do useful jobs and can be used freely in your own programs. For example there is a function "qsort" which sorts data into order: it's very flexible and can be used to sort many different kinds of data at the drop of a hat. There are typically well over a hundred such functions supplied with a compiler.

C has come a long way from its origins on UNIX and is now very widely available. HiSoft sell a C compiler on a wide range of home micros — the Spectrum, all the Amstrad models including

the new PCW8256, MSX disc models, the Tatung Einstein, and many other computers running the CP/M operating system. There are a multitude of compilers available for the IBM PC and MSDOS computers, and almost every mini and mainframe has a C compiler.

It is usually quick and easy to move a program from one to another, although differences do exist. For this reason business programs, and even operating systems, are now often written in C rather than machine code itself. The key here is UNIX which provides an effective standard to compare versions.

HiSoft can be found at 180 High Street North, Dunstable, Beds (telephone (0582) 696421) and will be pleased to help you with questions about C. The Kernighan and Ritchie book is entitled *The C Programming Language* and published by Prentice-Hall (ISBN 0-13-110163-3): it should whet your appetite for C further, though there are lots of other good books to choose from.

Dave Howarth

MACHINE CODE

In an interview with an American computer magazine Bill Atkinson, the author of the Macintosh's drawing program, MacDraw, was at pains to point out that he had written the entire program in "hand-crafted code". In other words, he had written it in machine code. This pride may come as a surprise to commercial games programmers, who

have been writing hand-crafted code all along.

Thew point of Bill Atkinson's remark, however, was that nowadays a program that has been written entirely in machine code, using an assembler, is something of a rarity. Operating systems and business application programs are increasingly written in a high level language such as C and then compiled. Even in 1981, when the BBC operating system was being developed, most of it was programmed in BCPL.

As memory prices fall, processors speed up, and compilers become more efficient, it makes more and more sense to develop software in this way. Unless a piece of code has to be particularly compact or fast, there is no need to write it in assembler. It takes longer to write and is less easy to convert for other machines.

But for home computer

owners the situation is slightly different. There are several good reasons why you should at least pick up a smattering of machine code. For one thing, it will give you a much better understanding of the way your machine works. It will also allow you to access those parts of the computer that Basic cannot reach. Interrupt-driven routines, for example, can only be implemented in machine code.

More important, though, is the fact that machine code is much faster than Basic. Take, for example, the problem of moving or animating shapes on screen. It is easy enough in Basic to move a character across the screen a character space at a time. But for smooth animation shapes need to be shifted only one or two pixels at a time. For this Basic is just too slow.

The speed advantages of machine code are very substantial indeed.

Competition results

CBM-128

Anyone who has ever spent much time hooked on one game is bound to consider ways in which the game could be improved. So it is not surprising that our August competition tapped a rich vein of suggestions, along with critical analyses and outbursts of frustration. The prize was a CBM-128. To be in the running you had to send in an idea for a new screen, room, or feature in your favourite game.

The most common and dullest idea was that the combatants in Way of the Exploding Fist should be equipped with weapons. Others were more imaginative and came up with such

improvements as a wellly throwing event for Decathlon, an option to do a dirty foul in International Soccer and be sent off, an asteroid belt for Elite, and — from S. Barron — the inspired idea of rewriting Hunchback in the style of Ant Attack.

Best of all, we thought, was the detailed proposal for a sado-

therapeutic dwarf bashing location in the adventure game Knights Quest. This wins Neil Thraves, 153A, Fullwell Ave., Barkingside, Ilford, Essex, the prize. In his entry he explained that he was maddened by being repetitively told, first, "A dwarf is with you" and then — after an attempt to kill the blighter: "he dodges your blows easily

and laughs". He supplied a sample text from the new location. It included such exchanges as:

SWING DWARF

The dwarf swings to and fro, trailing small sparks from his blazing beard and waving his stubby little arms.

CUT ROPE WITH SWORD

The dwarf plunges headfirst into the stone floor, and then begins to sing feebly about gold.

We also asked you to name your Top Ten commercial games.

The full results in the form of a list of the all-time top 50 games will be given in *Your Computer's* Top 100, to be published separately in December. For the time being see table 1 for the top 10, as computed from nearly 9,000 nominations:

Table 1.

1. Way of the Exploding Fist	Melbourne House
2. Knightlore	Ultimate
3. Ghostbusters	Activision
4. Elite	Acornsoft/Firebird
5. Hobbit	Melbourne House
6. Impossible Mission	US Gold
7. Daley Thompson's Decathlon	Ocean
8. Raid over Moscow	US Gold
9. Dambusters	US Gold
10. Pitstop 2	CBS

AMSTRAD 6128

"Put yourself in the place of someone writing a book entitled '1001 uses of a disc drive'. Now dream up an entry for it". So ran our intro to September's Amstrad 6128 competition.

In response you sent in a number of highly sensible and constructive suggestions together with...a lot of very silly ones. Many of the latter were in the same vein as the recent story about the secretary who made back-up copies of her wordprocessing files by photocopying her discs. Since had been told that the drive ran double-sided discs she took care to photocopy both sides.

A fair number of the entries seemed preoccupied with food. Along with suggestions for using a drive as a toaster we received outlines for a Disc Drive Pizza Machine, the Bisk Drive, totally compatible with lemon curd and smooth peanut butter, and a recipe for making Ramcakes, either 40 or 80 tracks.

Other ideas included J. Higgo's explanation of how to convert a drive into a Spectrum coolant fan, and G. Pearce's Abrazor disc. With its abrasive razor surface, the Abrazor ensures that "application of beard area systematically to drive aperture activates

simultaneous chin-scan and de-whisker operation".

Several other entries hit on an even more novel application:

clay disc shooting. The best of these was neatly illustrated by Roger Penwill, 127 Penenden, New Ash Green, Kent DA3 8LT

and wins him the Amstrad 6128.

September's Philips monitor and Mud competitions will be judged next month.

Roger Penwill,
Kent.

RESPONSE FRAME

COMMODORE 64 OR AMSTRAD?

Do you have a problem related to your micro? Our team will do their best to help. Please include only one question per letter and mark it "Response Frame". Alternatively, perhaps you have an idea you have an idea you'd like to pass on to others. Why not write to us with your top tips?

● I am thinking of buying my first micro but I can't decide between CBM-64 and Amstrad CPC-464.
*Ali Imran,
Lahore,
Pakistan.*

One of the main factors to consider before choosing between either machine is that they are both being superceded by superior machines built by the same manufacturers. Because of the relentless competition between manufacturers, in a few months time it should be

possible to buy both the CBM-64 and the Amstrad CPC-464 at very much reduced prices.

Access to more computing power

Both the BBC and the Amstrad give access to more computing power because of their superior Basic programming languages and graphics capabilities. However, the CBM-64 should not be over-looked as a first machine especially for the purpose you mention. The 64

has a huge software base and is capable of some fairly impressive feats.

What you must decide between, therefore, is the Commodore's impressive software support and the Amstrad's convenience with its built-in cassette unit and monitor.

But remember, both Commodore and Amstrad are releasing new, more powerful machines at prices similar to their predecessors.

Irwan Owen.

DETECTING A SPECIFIC CHARACTER

● Could you please tell me if there is a way on the Commodore 64 of detecting the specific character involved in a sprite-to-data collision e.g. in a game of Blitz, the blitz plane is a sprite, the buildings are redefined characters, and there are stars scattered above the buildings, which themselves are redefined characters. How can you tell if the sprite plane is colliding with the buildings and not the stars?

*Martin Wicks,
Southampton,
Hampshire.*

Unfortunately, the CBM-64

does not have a built in method for determining which screen characters a sprite has collided with.

The simple solution to your problem would be to print all the stars above the top of the line of buildings. It would then be a case of interpreting the Y-position of the sprite to decide what it must have collided with.

A more complicated approach is to convert the standard hires coordinates the sprite into character positions. This is done as

follows taking into account the X and Y offsets at the edge of the screen.

$x_char = \text{INT}((x - 24)/8)$
 $y_char = \text{INT}((y - 50)/8)$

These give x and y values of 1-24 and 1-40 respectively. These values can then be used in conjunction with a look-up table in the machines memory to find the address of the character square in the top left corner of the sprite. The contents of this address can then be accessed and identified.
Irwan Owen.

INSTANTANEOUS SCREENS

● Could you explain to me how I should go about making screens appear instantaneously in machine code and also how to work it so as a loading screen can be made to appear after loading Basic.

*Hadyn Seak,
Finsbury Park,
London*

A quick way to make a screen is to load it higher up in the memory than usual and then dump it to screen via an Ldir routine.

For example,
CLEAR 49150:LOAD""CODE
49151

```
then poke these values into
any part of the memory.
33,0,229 LD HL,SOURCE
17,0,64 LD DE,DESTINATION
1,0,27 LD BC,NO OF BYTES
(6912)
237,176 LDIR
201 RET
RANDOMIZE USR (START OF
ROUTINE)
```

The only thing about this is that it takes the same time to load, although more spectacular, and if you intend to write a game using full screens you'll waste previous memory.

By making a loading screen appear from Basic I assume you mean as in the case of Chuckie Egg and Wheelie, where the screen is hidden in the Basic.

The best way, I find, to do this is to tack an Ldir routine on the front of a screen and count the number of bytes (should be 6924). Next set up a Rem statement and put in the same amount of spaces (understand?).

For example:

```
10 REM ... etc
then make the next line as
follows:
20 FOR N = 23755 TO XXXXX:
PRINT N,PEEK N: NEXT N.
(Where XXXXX = any high
number).
```

As soon as you spot a "32" code number then write the address down. Delete line 20 and load the Ldir/screen into that address. Hopefully it will appear if you make lines 20/30 as follows:
20 BORDER X: INK X: PAPER X:
RANDOMIZE USR START
ADDRESS.
30 ... Continue with program.

A slightly more efficient way to do it is to get yourself a screen compressor program and load your screen into it. The compressed program that emerges will be self contained and you can load it back to any part of the memory you wish, including the basic. A quick Rand USR et voila!

Craig Rawston.

TOP TIPS

With this program for the BBC or Electron you can display letters at any angle on the screen either slightly smaller than normal or up to ten times larger. The program starts by asking for the word you wish to print, followed by the new size and angle.

L. Edmond.

```
10 MODE1:INPUT "WORD":WO#
20 INPUT "SIZE (0.60-10)":SI
30 INPUT "ANGLE (-8 TO 8)":DE
35 CLS:PRINTTAB(0,0),WO#
40 IN=32*LEN(WO#)
45 Q=(1279-IN*SI)/2
50 PROC1:titlar:END
60 DEFPROC1:titlar
70 FOR H=1 TO IN STEP 4
80 ANG=ANG+DE
90 FOR G=994 TO 1023 STEP 4
100 X=H*SI+Q:Y=G*SI+ANG-SI*1000
+300
105 GCOLOR,2
110 IF POINT(H,G)>>0 GCOLOR,2:DR
AW X,Y:ELSE GCOLOR,0:MOVE X,Y
120 NEXT G,H:ENDPROC
```

- C "the most welcome addition to the Spec-
trum catalogue since Sinclair introduced
the Microdrives" Sinc. User 12/84
- Font64 "the manual is clear ... very simple to
use" PCT 7/85

These are only a few of the glowing comments that we
have on file showing that user and critic alike find
HiSoft software offers a refreshing change of style.

We produce and market a wide range of high quality, professional and well-documented software packages for the popular home micros. Our type of software is becoming increasingly more popular as people get tired of zapping aliens and want to put their brains to work; learning new computer languages (Pascal, C, Devpac), investigating their computer's power (The Knife, The Torch) or being artistic (Font64), we have it all. Please feel free to write to us or phone for full technical details of any of our products. The above prices are fully inclusive and you can order directly from us or through your local computer shop.

COLT-A BRAND NEW ZX BASIC COMPILER

HiSoft Colt is an extremely fast and friendly compiler for ZX Spectrum BASIC. Fully supports ZX Microdrive, comes complete with sprite handler, window handler and toolkit, converts programs to run typically 100 times faster and is only £12.95.

HiSoft, 180 High Street North, Dunstable, Beds. LU6 1AT Telephone (0582) 696421

Strength
without
strain

BIO-BATON

A revolutionary new
isometric exercise bar that

Builds hawser-strong muscles in 3 minutes a day!

This ergonomically designed bar of polished hardwood
defies you to pit the strength of muscle against muscle.

A series of simple exercises each lasting **only six seconds**
each will use your own strength to build muscles of steel where
you need them most.

Try Bio-Baton for ten days. If you don't feel and notice a real
difference, return Bio-Baton to us and **we'll refund your
money.**

Bio-Baton uses dimensions drawn from gymnasts wall bars.
No springs, pulleys or complicated instructions. You can use it
at work, and because you use your own muscles to build other
muscles, **anaerobically** there's no risk of strain.

- Strong upper arms and
shoulders.
- Tight, well formed chest

- Flattens bulging
stomachs.
- Improves posture.

YES

Send me **BIO-BATON(S)**
today at this introductory price of
**£10.00 (inclusive P+P and
V.A.T. with full exercise
instructions. I enclose a
cheque/P.O./Cash for**
I understand that if I am not fully
satisfied within 28 days I can
return the Bio-Baton to you and
will receive a full refund.

**MONEY BACK
GUARANTEE**

MAIL ORDER PROTECTION SCHEME

If you order goods from Mail Order advertise-
ments in this magazine and pay by post in
advance of delivery, *Your Computer* will consider
you for compensation if the Advertiser should
become insolvent or bankrupt, provided that:

- (1) You have not received the goods or had your
money returned; and
- (2) You write to the Publisher of *Your
Computer* summarising the situation not
earlier than 28 days from the day you sent
your order and not later than two months
from that day.

Please do not wait until the last moment to inform
us. When you write, we will tell you how to make
your claims and what evidence of payment is
required.

We guarantee to meet claims from readers made
in accordance with the above procedure as soon
as possible after the Advertiser has been declared
bankrupt or insolvent.

This guarantee covers only advance payment sent
in direct response to an advertisement in this
magazine not, for example, payment made in
response to catalogues etc., received as a result
of answering such advertisements. Classified
advertisements are excluded.

Software File

PRO SYNTH

► *Andrew Parker • CBM-64 • Warrington, Cheshire*

This program allows you to use the keyboard as a sort of musical instrument. The keyboard is from Z to / and from Q to *. This gives a span of three octaves.

Sharps are
S,D,G,H,J,L,:2,3,4,6,7,9,0,+.

When the program is running, a sprite "hand" is visible. This is moved by a joystick in port 2. Placing the finger on the hand over a plus or minus sign causes the connected value to change by +1 or -1 respectively. This works with the Envelope and Pulse Width Resolution (PWR). With the Oscillator 3 frequency, pressing the fire button allows the function keys to alter the frequency. This is because the frequency can be between 0 and 65535 Hz.

Programs for Software File should be fairly compact and sent on a cassette. Please include clear instructions and say what computer it's for. We pay between £6 and £36 for programs published. They must be double-checked and submitted to *Your Computer* exclusively.

Therefore, the function keys either add (+) or subtract (−) the following values:

F1 = ± 1 F3 = ± 10 F = ± 100 F7 = ± 1000 (Hz)

This allows rapid changes of the frequency. When the required frequency is set, pressing Inst/Del returns to the keyboard. This frequency only applies when ring modulation or synchronization is working.

Waveforms are selected by placing the finger on the required waveform and pressing the button.

Reversed characters shown

correct selection. Ring modulation and synchronization (RM and SY) are selected in the same way. To turn off, repeat the process. Note that if one is selected while the other is still on, it will be turned off.

Oscillator control shows which voices are working, either voice one voice or both.

ADSR: Attack, Decay, Sustain, Release. The four parts of a standard envelope generator. The note rises to a peak, decays to a sustain level, then dies away.

MODULATION:

Application of a control voltage, for example a low frequency oscillator (LFO) to control an element in the shaping of a sound. In other words, the use of one control to influence or alter the effects of another.

RING MODULATION: As MODULATION, producing an output equal to the sum and difference of the two input frequencies.

Produces some bell sounds.

SYNCHRONIZATION:
Combining two notes
without altering their pitch.

Listing 1.

ULTRALIST

►Mark Franklin • Spectrum
• 69 The Heights, Northolt,
Middlesex

This program allows you to produce decent looking listings on an RS-232 printer, connected to the Interface I. It indents the lines so that the only things which can be seen in the left hand column are the line numbers. It also prints up page numbers for printers using single

sheets of paper, and allows any number of characters per row. It lets you list out a particular range of line numbers from a program, so that there is no need to waste paper printing unwanted lines.

To enter the program, run the machine code loader given. Once you get the message "DATA OK", the loader gives you a chance to customise it to the size of your own printer. Once this is done save it to microdrive using

the command:-
SAVE "m";1;"ULTRALIST"C-
ODE 64000,1000

The program requires four parameters in a special order. However, if only two are given, the other two will be given an assumed value. Similarly, if none are given, all four will be assumed. They are specified in a Rem statement in line 9999.

The order they are given is: Start line No, finish line no, start page no, listing width-5. They should be written with spaces between them. The last one, listing width, is the number of characters printed per line, and can be adjusted to allow room for comments on the right hand side. If this is not specified, it will be set to the printer width value. The start page number is included so that individual pages can be printed, if only a small alteration is made to what that page previously read.

One the parameters have been entered, type
RANDOMISE USR 64000

It will now begin printing. When it reaches the bottom of the sheet of paper, the boarder will go red. This is a signal that

you can set up the next sheet of paper and press any key to resume the listing.

If, at any time you wish to abort the listing, press the "A" key until the border goes blue. It will now finish printing the current line.

The program was written with the Brother EP-22 printer in mind. The pound symbol code on this printer is different to that of the Spectrum. If your printer is not like this, then POKE 64557,0 and POKE 64558,0.

Also, all graphics are printed as "?". I have included a demo program and a listing which if produced itself show the main features.

To change the operating BAUD rating, initially set at 300 Bd. Type in the following instructions:-
FORMAT "t"; Baud rate.
POKE 64212, PEEK 23747
POKE 64213, PEEK 23748

I will be pleased to answer any inquiries about the program if an SAE is sent to Mark Franklin, 69 The Heights, Northolt, Middlesex, UB5 4BP. I can also supply a ready made copy on tape for £2.00 and on Microdrive for £3.50.

TECHNICAL DETAILS

3.5" 250 K disc drive
Double density disc interface
Parallel printer interface
Joystick interface
Video monitor interface
Peripheral through connector
Built-in power supply
Utilities on ROM including format and verify
RAM disc facility
Random access files fully supported
Connections for second drive upgrade
Comprehensive user manual

Total: £199.95 inc. VAT

Discovery – helps your Spectrum make all the best connections for only £199.95

In one simple step you can now transform your Spectrum into a complete computer system. Discovery from Opus Supplies is a sophisticated computer nerve centre combining not just a powerful disc drive and double density disc interface but the most comprehensive range of interfaces capable of running printers, monitors, joysticks and other peripherals.

No other system can offer your Spectrum so many options – allowing you to play the very latest games or providing facilities for serious business use. Discovery's specification includes over £300 worth of Spectrum peripherals and yet, at just £199.95, this remarkable all-in-one system costs less than a disc drive and interface combination.

Just connect Discovery to the rear of your Spectrum and you've started the transformation. Now you have immediate access to the very latest Japanese 3½" disc drive controlled via a powerful and ingenious double density disc interface. The unit's built-in power supply feeds both Discovery and your computer allowing you to dispense with your Sinclair power supply.

The Opus system takes no user memory from your computer giving you full compatibility with all tape-based software including programs designed for use with microdrive and Discovery even has its own RAM disc allowing you super fast access times.

Now the choice is yours. Connect up a joystick or a printer to the built-in Discovery interfaces, link-up to a video monitor or incorporate your own choice of peripheral using the through connector.

Whether you choose Discovery for games or business use you can rely on a complete range of readily available disc software produced by many of Britain's leading software companies, and our price of £199.95 includes an unbeatable two-year free warranty and free delivery.

Discovery is available nationwide from Boots and from all good computer stores across the country. Ring us now on 0737-65080 for details of your nearest dealer, or to order your Discovery.

Trade and export enquiries welcome.

SCREEN DUMP

► Nick Godwin • Amstrad • Eyemouth, Berwickshire
Since I obtained a Brother M-10009 printer I have, of course, been plugging-in various routines to try and fully utilise its capabilities. However, because for some reason beyond my comprehension the Amstrad CPC-464 does not send bit 7 to the printer, some 50 per cent of the excellent printer characters are unavailable to me. In fact, I can't even get the printer's £-sign!

I therefore quickly became interested in the idea of a screen-dump, and have been plugging in every such program that I have been able to find.

However, I was unable to find one that satisfied my needs, so I decided to knuckle down and write my own.

This screen dump is different from most in that it is designed for A4 size paper, somewhat wider than usual. Also, rather than dumping the whole screen, it dumps one line only, which is selected by sending a parameter — the line-number — to the machine-code. The whole screen can thereby be dumped from Basic, if required, or any line or set of lines that you may happen to require. The parameter can be either a constant or a variable.

In order to make up the additional width, I have arranged for the four horizontal bits that must

be interpreted from the display to be translated into six bits to be set to the printer. In order to retain squareness, I matched this vertically, so that each printed character is in fact twelve bits high rather than the usual eight. This has resulted in a "chunky" look which I find rather nice. Line-drawings, such as circles and squares, are therefore true in shape.

The Basic Loader enables the machine code to be placed anywhere in Ram above Himen — space is reserved if necessary. The complete code and variables occupies 253 bytes. Provision is also made for printers with a minimum line-feed unit of 1/36", instead of the 1/72" that is

available to me — in fact, the M-10009 has a minimum line-feed capability of 1/216", but I do not use that in this routine.

Because the printer has to make two passes for each line of print, the net printing speed is reduced accordingly, but this is more than compensated for by the additional graphics capability. In fact, anything that can be displayed on the screen can be copied to the printer. Note, however, that the graphics origin must be 0,0 before the machine code is called.

The machine code does not assume ink 0 to be the paper ink, but tests to see what ink the paper is set to. That is the only colour not printed — all other inks are dumped.

Listing 1.

SCROLLS

► *A Bratley • Spectrum • Grimsby, South Humberside*
Here is a set of eight versatile, easily used and interesting scroll routines which can be added to your Basic programs to clear all or part of a screen in one of 8 directions.

The routines scroll one character square at a time in the following compass directions.

N, S, E, W, NE, NEW, SE, SW.

The old character square is blanked out and its attribute is replaced with one of your choice.

The difference between these and previously published routines is that any section of the screen can be scrolled in any direction and leave any colour attribute behind. This includes the bottom two lines.

There are only five parameters you have to supply in order to define the section of the screen to be scrolled, and below are the addresses you need to poke for both 16K and 48K machines. (16 in brackets)

POKE 64000, (31232), h.
(1 to 24)

POKE 64001, (31233), w.
(1 to 32)

POKE 64002, (31234), r.
(0 to 23)

POKE 64003, (31235), c.
(0 to 31)

POKE 64004, (31236), a
(attribute)

This defines a box of height h, width w, with a top left-hand corner at r,c (where r and c are the normal PRINT AT coordinates), to be replaced with a new attribute a.

Height and width must always be at least one because a box must have two dimensions, and care must be taken to see that the box does not exceed the screen limits.

The attribute is calculated in the usual way by multiplying the paper colour by eight and then adding the ink value. If bright is required add a further 64 to the total so far, and finally if Flash is required add a further 128.

After poking the values for machine code routines to use you will then have to select whichever scroll direction you require.

The table below gives you the addresses for both machines

DIRECTION	16 K	48K
N	31241	64009
S	31253	64021

E	31265	64033
W	31277	64045
NE	31289	64057
SE	31303	64071
SW	31317	64085
NW	31331	64099

These routines use the values r,c (row, column) to calculate the actual memory address of the top left-hand corner of the box and its corresponding attribute address. They then take the width and height of the box and use the lower of these two values as a loop counter within the machine code to repeatedly call the appropriate routines until the box is cleared. This saves using a For Next loop in Basic and therefore speeds up the scrolling. However, this has a slight disadvantage in that very small boxes are scrolled off so fast that the effect is lost.

Because the machine code is not relocatable I have given two decimal dumps for the for the 16K and 48K machine. The 16K version is entered at 31232 and the 48K version at 64000, and both are 654 bytes in length.

To enter the code use the decimal loader in Program 1. There is a checksum at the end to

make sure no data entry errors have been made.
16K Checksum = 73333
48K Checksum = 83923

You can obtain a printout of the decimal dump by typing GOTO 1000, if an error has been made. If you have no printer change the LPrint statements to Print statements and check it on the screen. When you are sure everything is OK then save the code by typing;
16K SAVE "Scrolls" Code 31232, 654
48K SAVE "Scrolls" Code 64000, 654

To load the code CLEAR 31231 for a 16K or 63999 for a 48K, then Load "" 'code.

I have written a demonstration program which runs through all the routines with different size boxes to give you some idea of what the routines can do.

A good idea is to set up the parameters of the box first then load a Screen\$ from a commercial game and finally run a routine to clear part of the screen. This gives you a very interesting effect, especially the diagonal scrolls.

(continued on page 125)

Self Adhesive Cassette & Disk Labels

★ 3" & 3½" COMPACT DISK LABELS

★ SINCLAIR MICRODRIVE LABELS
(ON TRACTOR FEED BACKING PAPER)

★ 24 HOUR SERVICE FROM STOCK

CASSETTE LABELS ON A4 SHEETS - White only, suitable for printing by offset litho or photocopying: 100 labels - £3.50; 200 - £6.00; 500 - £12.00; 1000 - £21.85

CASSETTE LABELS IN ROLLS - Complete with tractor feed backing paper for overprinting by computer printer. Available white or tinted blue, pink, green, orange, yellow, grey, peach, or cream. Minimum order 500 labels.
WHITE: 500 - £14.66; 1000 - £20.70; TINTED: 500 - £16.90; 1000 - £24.15

DISK LABELS - All labels are on tractor feed rolls with tints as above. 95 x 36 mm. WHITE: 500 - £12.75; 1000 - £17.75; TINTED: 500 - £15.20; 1000 - £24.65

3" & 3½" COMPACT DISK LABELS - 70 x 69 mm. white or tints as above. WHITE: 500 - £15.55; 1000 - £22.05; TINTED: 500 - £21.35; 1000 - £31.05

SINCLAIR MICRODRIVE LABELS - Side label 28 x 19 mm., Spine label 31 x 5 mm. Labels laid out side by side on tractor feed backing paper.
WHITE: 1000 - £12.15; 2000 - £18.72; TINTED: 1000 - £16.64; 2000 - £32.52

SELF ADHESIVE COMPUTER LABELS - Superfast

BETA BASIC 3.0

SPECTRUM 48K

SINCLAIR USER, JAN. 85 (ABOUT RELEASE 1.8): "HAS ESTABLISHED ITSELF AS THE STANDARD EXTENDED BASIC FOR THE SPECTRUM...TURNS SINCLAIR BASIC FROM A GOOD VERSION OF THE LANGUAGE TO A FANTASTIC ONE." NOW, WITH RELEASE 3.0, BETA BASIC BECOMES PROBABLY THE MOST POWERFUL BASIC AVAILABLE ON ANY 8-BIT MICRO!

- * PROCEDURES - a terrific implementation that lets you extend your Basic! No PROC keyword is needed; e.g. you can use commands like: swop a,b or draw box 10,20,5 or addup b),sum. With parameter passing by value or by reference (including arrays), LOCAL variables and recursion.
- * Up to 128 WINDOWS with their own attributes and character size.
- * ANY CHARACTER SIZE (giving from 1 to 64 or more chars/line!).
- * LISTINGS with optional automatic indentation of loops, procedures, IF, etc. Works on existing Spectrum Basic programs too!
- * KEYWORDS (including the Spectrum Basic ones) can all be entered by typing them in full, or by the "single entry" method, or both in the same line.
- * A full range of TOOLKIT commands. * EXCEPTIONAL ARRAY and STRING handling.
- * Many powerful GRAPHICS commands. * EXCELLENT EDITOR - fast and convenient.
- * MICRODRIVE commands are improved and much easier to use.
- * OTHER FEATURES, new or improved, are too many to fully list! DO - LOOP structure with WHILE, UNTIL and EXIT IF; ALTER, AUTO, BREAK, CLEAR, CLOCK, CONTROL CODES, DEF KEY, DPOKE, DRAW TO, EDIT, ELSE, FILL, GET, JOIN, KEYIN, multi-LET, LIST a slicer, LIST DATA, ON, ON ERROR, OVER 2, POKE strings, POP, READ LINE, REF, ROLL, SCROLL, SPLIT, TRACE, USING, Faster GOTOs, GOSUBs and FOR-NEXT loops.
- * 26 POWERFUL FUNCTIONS: AND, OR, XOR, DEC, HEX\$, BIN\$, fast SINE, COSE, RNDM; CHAR\$, NUMBER, DPEEK, EOF, FILLED, INARRAY, INSTRING, ITEM, LENGTH, MEMOYS, MEM, MOD, SCRN\$, SHIFTS, STRINGS, TIMES\$, USING\$.
- * Spectrum Basic compatible - you can run existing programs. Transferable to Microdrive. Wafadrive and other special versions available.
- * Comprehensive A5-size manual. More than 80 pages, packed with examples.
- * To show you the power of Beta Basic's excellent procedures, we include on each tape a FREE TURTLE GRAPHICS package!
- * Upgrades to Release 1.8 customers: If you bought direct from us, there is no need to return your cassette - just quote the (approximate) original purchase date with your order; otherwise return your cassette and name your supplier. The upgrade price of £8.95 (£7.50 overseas) includes a new manual. Release 1.8 remains available, at a reduced price of £8.95 (£9.50 overseas).
- * TRANSFORM your Spectrum with BETA BASIC 3.0 for just £14.95 inclusive! (£15.50 overseas). Or if you want to know more about the program, send us an S.A.E.

(TICK AS APPROPRIATE.) PLEASE SEND ME:

- ☐ BETA BASIC 3.0. PAYMENT OF £14.95 (OR £15.50 OVERSEAS) IS ENCLOSED.
☐ BETA BASIC 3.0 UPGRADE. PAYMENT OF £6.95 (£7.50) IS ENCLOSED.
☐ BETA BASIC 1.8. PAYMENT OF £8.95 (£9.50) IS ENCLOSED.
☐ MORE INFORMATION ON . I HAVE/DO NOT HAVE RELEASE 1.8 ALREADY.
 A STAMPED ADDRESSED ENVELOPE IS ENCLOSED.

WITHOUT OUR 'LEARN BASIC' YOUR COMPUTER IS ONLY PLAYING GAMES...

LOGIC 3's COMPLETE TEACHING PACKS FOR TODAY'S MOST POPULAR MICROS

Based on the teaching methods developed by Professor Andrew Colin of Strathclyde University, Logic 3 is the most comprehensive guide to Basic programming currently available.

Logic 3 is designed for people who want to keep abreast of the computer age, for people who realise that understanding computers is a key to future success at work, at school and as a parent.

If you are thinking of buying, expecting a present, or already have an Acorn Electron, BBC, Sinclair Spectrum 48K, Dragon 32/64 or Amstrad CPC 464/664 you need Logic 3 'Learn Basic' too.

Each Logic 3 pack contains a 190 page work-book, 2 cassette tapes containing 20 programs plus a flow-chart stencil.

QTY	COMPUTER	PRICE	TOTAL

HOME MICROS — REPAIRED —

ACORN; BBC model B, model B plus, Electron; ADAM (keyboard only); AMSTRAD CPU (keyboard only); ATARI; 400, 800, 400XL, 800XL, 130XE, 420, 260, AQUARIUS, COLECOVISION, COMMODORE; VIC20, C16, C64, C128, plus 4, SX64 CPU (keyboard only) DRAGON; 32, 64, EINSTEIN, ENTERPRISE; 64, 128, LYNX; 64, 128 MEMOTECH, ORIC; atmos PSION organiser SINCLAIR Spectrum, Spectrum +, SPECTRAVIDEO, TANDY TRS 80 model 1. All MSX computers.

£30

DISK DRIVES — REPAIRED —

All 3in., 3½in., 5¼in. disk drives including Amstrad on-board disk drives

(this price does not include drive heads which are subject to quotation)

£36

HERE At last!

PRINTERS — REPAIRED —

All dot matrix printers of under 300 cps

(this price does not include print heads which are subject to quotation)

£32

TELEVISIONS & MONITORS — REPAIRED —

All televisions and monitors up to 16in.

(this price does not include tubes which are subject to quotation)

£45

All repairs include VAT, labour, parts, 6 month warranty, collection and delivery.

* Full 6 month guarantee on repairs

* No extra charge for parts

* Full soak test before despatch

* FREE collection and delivery in mainland UK

COMMODORE

COMPENDIUM CHRISTMAS PACK

As seen on T.V. the perfect introduction to family computing, including a Commodore 64, a Commodore data recorder, Adrian Mole software, an amazing graphics programme and a music make enabling the 64 to be turned into a musical keyboard.

R.R.P. £199.99

Free! Quickshot II joystick and extra game.

£190.00

DISK DRIVE PACK

This value for money pack includes a Commodore 64 and a 1541 disk drive.

R.R.P. £299.99

Free! 10 Blank Diskettes

£280.00

Please send me:-

- Commodore Compendium Christmas Pack(s) **£190.00**
- Commodore Disk Drive Pack(s) **£280.00**
- DK Tronics Single Port Interface(s) **£5.95**
- DK Tronics Dual Port Interface(s) **£9.95**
- DK Tronics Keyboard(s) **£25.00**
- Quickshot II(s) **£6.95**
- 3" Diskettes CF2(s) **£3.25**

It's a snip.

For only £14.00 you can have Your Computer delivered to your door, every month, for a whole year! It's the best way of making sure you get your own copy of Britain's biggest selling home computer magazine, and of keeping in touch with all the up-to-the-minute news, views, advice and information on the computer scene — without queuing at the newsagents. And if you don't want to snip at your favourite magazine with the scissors, just photo copy the page and send it to us instead. We won't feel cut up about it — and neither will you!

YOUR COMPUTER

Please send me YOUR COMPUTER each month for 12 months.

A. I enclose cheque/PO to the value of £14.00 (UK), £22.50 (Overseas). Cheques should be made payable to Business Press International Ltd. Air mail rates available on request.

B. Please debit my credit card account:

YOUR COMPUTER

ABC Elektronik

Telex: 932 974 budde d

Hügelstraße 10-12
4800 Bielefeld 1
West Germany

The Giga Soft Mouse for the Sinclair QL is now available!

Price £49
exc VAT, including p&p

How to order: (1) Send a cheque to ABC; (2) Transfer money to Postcheckamt Dortmund to Mr Budde, Account No. 902 83 469; (3) Send an order to the address above, we will send the package with post cash on delivery.

The hardware:

The mouse + special interface to use with the joystickport of the QL computer. The mouse resolution is 0.26mm.

The software:

GIGA Basic: This extension adds more than 70 new commands to SUPERBASIC. This includes a full screen editor, animated sprites, mousecontrol commands, GEM style pulldown menus and many more.

E.A.S.E.: A totally new user interface for the QL. It supports a desktop environment, similar to GEM. It includes pulldown menus, icons, really scrollable windows, a calculator and a game. This program enables the user to have access to all system functions in an easy manner.

SPECIAL OFFER
from

BEAT THE DUST PROBLEM

YOUR COMPUTER

The Mini-Vac is a vacuum cleaner in miniature. It fits in the hand and comprises a chrome plated metal body, which contains a surprisingly powerful motor driven by a PP3 size battery (not included). There is a choice of two tubular nozzles on which can be fitted a large or a small soft bristle brush and a dust collection bag with Velcro flap for emptying. When used as a vacuum cleaner it was found to be ideal for dust removal from the inside of computers and peripherals, or around keyboard and screens. By removing the dust bag and putting one of the nozzles in its place it can also be used for blowing.

Has many other uses: for blowing or removing dust from stereo and video equipment, cameras, lenses and enlargers.

OFFER PRICE £8.99 incl. 15% Vat and UK p&p

Order from Your Computer Mini-Vac Offer, 48 Beauchamp Place, London SW3 1NX using coupon or copy or plain paper. Allow up to 28 days for delivery. UK addresses only. Closing date 31.12.85. Cheques should be made payable to Your Computer Offers. If Vat receipt is required, it is essential to say so when ordering.

Interactive BASIC Programming 48K ZX Spectrum & Spectrum +

Don't let books blow your mind, use your computer to teach
you BASIC - what could be easier?

The only ZX BASIC programming course that runs in your Spectrum and gives you complete control over the computer.

Learn BASIC with your hands on the keyboard, not with your head in a book!

IBP consists of twelve programs called Learning Modules. Altogether more than 250K long! Whilst using a Module you will have complete control over your computer. So when IBP explains, for example, how to use the BEEP command you can try it out there and then before continuing. You will be asked to write programs throughout IBP. Don't worry though, you can call on two hints for each program and then get IBP to put its own solution into BASIC for you to look at and RUN. There are eighty programs like this. Many demonstration programs are given, also.

THE IBP COMPETITION

Epson FX80 printers are the best all round printers and Eigen Software are giving away two of them! To enter the competition you must write a BASIC program, record it on the official cassette (free with the IBP package) and send it to the address below. Entries will be considered in two categories: games and non-games. The writers of the best program from each category will receive a printer system. ALL other entrants will receive a copy of the two winning programs!

The whole Interactive BASIC Programming package costs £9.95.
If your computer shop does not stock Interactive BASIC Programming then send £9.95 for the package by return of post (p & p free) to:

Eigen Software

NOW YOU CAN EXPLOIT SPECTRUM GRAPHICS TO THE ULTIMATE.

With the Graphics Suite from Print 'n' Plotter.

If you're interested in producing great graphics with your Spectrum, then these programs are designed with *you* in mind.

And you *don't* have to be an expert. Even with no programming knowledge the programs will enable you to produce fantastic graphics to use in every piece of software you write.

Or you can use them just for the fun of producing computer art.

Each of the programs are inter-active and together they form the most accomplished graphics toolkit you will find on the market today.

But you can also use each of them separately, as each are self-contained and cover a specific area of graphics programming.

With Print 'n' Plotter's 'GRAPHICS SUITE', everything is made so simple you won't believe it.

Just a few of the things you can do...

PAINTPLUS (GRAPHICS SUITE 1)

If you want to produce fantastic screen graphics or UDG's on your Spectrum, then you will find PAINTPLUS not only a complete graphics toolkit... but also the simplest to use at every level.

Facilities include: DRAW, PLOT, ARC, CIRCLE, FILL IN SOLID OR PATTERNS, FILL IN OVER MODE, DRAW RADially, ARC RADially, ENLARGE TO EDIT, PAPER WASH, BOX DRAW and so on...

As well as drawing, PAINTPLUS has a tremendous UDG section. It also has UDG "grabbing" from screen as well as full facilities for defining, saving and loading UDG sets.

The Organiser section of the program enables you to automatically store multiple screen graphics or multiple UDG banks.

PAINTPLUS comes with a demo of screens, animation and alternative character sets, plus a copy of Print 'n' Plotter PICTURE BOOK - 100 pages of instructions, hints, tips, listings and related graphics information.

SCREEN MACHINE (GRAPHICS SUITE 2)

SCREEN MACHINE is the graphics manipulator.

Use it when you want to take your graphics and turn them into professional machine coded data for use in BASIC or M/Code programs. For instance:

SCREEN MACHINE will compress the memory consumption of your graphics to cram even more into the computer's memory -

As well as memory compression, SCREEN MACHINE allows you to put your graphics through a series of highly-sophisticated graphics manipulations.

These include ENLARGE, REDUCE, RELOCATE TO OTHER PARTS OF THE SCREEN, STEP AND REPEAT, BLEND SCREENS TOGETHER, RECOLOUR SELECTIVELY OR GLOBALLY, FLIP SCREEN, etc.

And SCREEN MACHINE also has a dedicated Text Compiler - ideal for anyone who uses lots of text for instructions or menus on screen.

SCREEN MACHINE also comes with a copy of PICTURE BOOK and a demo that's so good you can't believe it.

ART-O-MATIC (GRAPHICS SUITE 3)

Ever wanted to produce screen graphics for Adventure Games, Educational, Training, or Scientific programs and run out of memory because the graphics handling consumed too much memory?

If so, you need ART-O-MATIC, Print 'n' Plotter's great new graphics compiler.

With ART-O-MATIC you can draw, define and store an incredible number of screens or parts of screen in your programs as compiled instant machine code which is usable from BASIC or M/C.

The exact amount of compression possible depends on your graphics, but up to 99% is possible and an average of 85%-90% is usual.

ART-O-MATIC is a complete graphics drawing program, so you can produce your works of art and compile at the same time.

The instruction book and demo that comes with the program show you *everything* you need to know about cramming great graphics into your Spectrum.

SPRITE MACHINE (GRAPHICS SUITE 4)

There have been a number of programs called Sprite Generators. Most of these are self-contained and not a Sprite to people who want to use Sprites in their own programs. SPRITE MACHINE is different. This program was written with *you* in mind - whether you are a professional, amateur or beginner.

There's never been a simpler Sprite program to use. All you have to do is draw your Sprite and then choose from a fantastic range of options to get it doing what *you* want.

You can: animate your Sprites, choose any direction and starting position, adjust speed, adjust height, choose running time, decide on edge actions such as bounce, wraparound, reflect or stop, make intelligent decisions like strike and collision actions, colour your Sprites or take colour from the screen, trace or non-trace, etc.

The program comes complete with a cursor-operated Sprite drawing board and catalogue/store function.

Instruction booklet and demo are included with the program.

Now *you* can have professional Sprites in *every* program you write.

**ON SALE
27th NOVEMBER**

Joysticks and keyboards love a challenge on long cold nights, and that's when this book will come in very handy. It's written by the same people who've made Your Computer the country's most popular home computer magazine and it's packed with programs and games that will test even the toughest joystick or keyboard.

The 'All Time Top 100 Games' is a comprehensive reference guide to the most popular commercial software ever released for all the best selling machines. As well as the Top 100 Games, this definitive guide for games players has tips on adventure playing, an A-Z directory of hundreds of games not in the top 100 and the top 20 choices of the professional authors themselves. Plus a reader top 50, games maps, features on flight simulators and telegaming, and the worst games ever.

It's on sale from 13th November in all good booksellers. Or you can order your copy direct from us by completing the coupon below or calling in at our trade counter, 5 Sumner Street, London SE1.

Please send me _____ copy/ies of the 'All Time Top 100 Games' at £2.70 each inc. p&p.

- * Or shaded colour representation.
- * Tab to any position on paper.
- * Many more features!

Price £7.50 cassette, £9.00 cartridge.

SUSS BOX

£49.95
+VAT
incl. carriage
CWO please
pocket size

The DUPLEX SUSS-BOX has been designed to
enable the less skilled computer user to have a
better understanding of the correct working
connection between a computer and a peripherals,
such as a printer. This is achieved by using the
commonly used signals (wires) of the RS232C
serial data cable specification, a matrix-block and
special connector pins. By inserting the connector
pins into the SUSS-BOX's matrix-block at the axis
of two incoming signals the user can quickly
establish a firm connection. The signals are
routed into the SUSS-BOX by two 25 way D
type connectors; 1xfemale, 1xmale. The SUSS-
BOX also provides a lamp for each signal to
show its condition when connected in line, ie
high or low. SUSS-ADAPTOR & CABLES
available.

Available for 48K SPECTRUM only

48K Spectrum NEW TITLES — LOW PRICES All Microdrive Transferable

PROGS FILE — When we saw this program-name data base, we used it for the sheer joy of seeing the screens which are the best we have seen in a utility program. Reduce typing, this program reads in your microdrive program names — automatically! Very easy to use.

SKETCH — three, free screen pics to show what is possible with this graphics utility.
THE GOLDEN COBRA — Real-time adventure in Basic? Yes, it can be done — join in the search for the Golden Cobra. (Runner up in the 1984 Cambridge Awards.)

UTILITY A — Four programs, two specifically for the microdrive owner.

Car Loader — a single-key, self-updating "run" menu to dramatically simplify Microdrive use.

Save It — developing a program? 'Save it' auto-numbers each version, erasing anything older than you want to keep.

Time Count — converts elapsed time to counter readings in table form on video and cassette recorders.

Autodraw — artificial intelligence? Just who is doodling — man or machine!

ALL THE ABOVE NEW TITLES AT £2.50

PRO-MAT — This menu-driven program will save you scrambling through the manuals for those elusive control codes. Easy use. Available for Epson, Brother M1009 and Walters WM80, via Interface 1 or Kempston's Centronics E. Please state printer and interface when ordering. (Other versions under development.) £3.50.
SAE brings details of any of the above. Please add £1.00 for overseas orders.

WDSOFTWARE

FOR THE QL

Utilities (3rd ed) (base £5.50)
PRINT 60-file DIRectory or view it on one screen, one-key LOAD, COPY or PRINT 60 files with one key (allows for namesakes). Multiple FORMATTing to prevent corrupting by stretching of tape. TOOLkit to give dated, numbered modules in program development. PRUNE old files to release space (one key DELETes a file). Full instructions in QUIL file. Use up to 6 EXTRA MICRODRIVES (add on your Spectrum ones!)

WD Utilities for CST Q-Discs (2nd ed) (base £8)
As above, with extra utilities: 100-file capacity, for CST/Computamate disc systems AND up to four extra microdrives. User-friendly timesavers. Update 1st ed for 25p (£1.25 outside Europe).

Ref QL (5th ed) (base £5)
900 useful QL references in an ARCHIVE file (too long to share cartridge with other software). Also ARCHIVE 2 search program.

FOR SPECTRUM/QL/BBC/ELECTRON
WD Morse Tutor (base £4)
From absolute beginner to beyond RYA and Amateur Radio receiving. Adjust pitch. Set speed to your test level (4-18 wpm). Learn from single characters, via groups with wide spaces to random sentences; decrease spacing to normal. Write down what you hear, then CHECK on Screen or Printer (or speech for Spectrum with Currah Microspeech). Also own message, random figures, letters or mixed.

FOR SPECTRUM 48K
WordDrinder (microdrive/disc only) (base £8)
For CHEATING at crosswords. Finds m-a-s-s-g letters, solves anagrams of shingle words. 13,000 word vocabulary. 10-letter word ending in ATE? No problem!

Tradewind (base £4)
Sailing/trading strategy game with graphic surprises.
Jersey Quest (base £4)
Test adventure with Bergerac and the Dragon. Based on genuine folklore of the Island or Jersey. (Not on SPDOS)

PRICES (incl. Europe postage — elsewhere add £1).
Cassettes — base price only. QL or Spectrum Microdrives — £2/cartridge plus base price; 5K "floppies £2, 3K "floppies £4 plus base (SPDOS/Beta/OPUS discs for Spectrum). State required format when ordering. ACCESS/Mastercard welcome (over £4).

Two or more programs on one medium — pay medium + base. e.g. WD Utilities and Morse on microdrive for £11.50, but IMPOSSIBLE to mix QL/BBC/Spectrum programs on one medium. Send YOUR cartridge and base price, but FORMAT it FIRST six times like us for reliability.

PROGRAMMER REQUIRED

Palace Software are looking for a full-time Spectrum programmer to join their team.

It is not necessary to have previously worked as a programmer but an extensive knowledge of programming in machine code on the Spectrum is required and applicants will be expected to prove their experience.

The job would probably suit someone aged 18-25 and based in London.

Salary will be based according to experience but will also include a royalty.

If you are interested phone Pete Stone on 01-278 0751 or write to him at 275 Pentonville Road, London N.1.

**PALACE
software**

...the Duraplug
Mains Filter
Adaptor...

The Duraplug Mains Filter Adaptor is an essential, yet inexpensive, item for any user of sensitive electronic equipment in the office or home. Plugged into an ordinary wall socket it provides adequate protection against distortions in the mains supply, 'laundering' noise and spikes out of the current and preventing digital circuits from misbehaving.

...the end of the
line for spikes!
